Textile ORGANON

FEATURING MAN-MADE FIBERS

VOL. LI • NO. 11

NOVEMBER
1980

TEXTILE FIBER END USE SURVEY

The first 12 pages of this ORGANON issue present the results of the latest in a series of surveys of United States textile fiber consumption by end use. Annual data are shown for the seven years 1973 through 1979. The data of this survey for 1973 and forward supersede those of similar earlier surveys.

Compared with last year's survey, the data presentation is essentially the same except that significant revisions herewith in the data for 1973-1978 are indicated by a black circle (•). Also see footnote (r) on page 175. As more reliable data become available, they are incorporated into the survey.

In 1976, some rather significant changes were made in the classifications. The "Other Consumer-Type Products" section was eliminated and divided between the "Apparel" and "Industrial" sections. More significantly, within the "Apparel" section, certain end uses were grouped by fabric weight into Topweight and Bottomweight Fabrics. See the November 1976 and 1977 ORGANON issues for a more detailed discussion of these changes.

When the changes described above are kept in mind, the data in this survey may be used in conjunction with earlier issues of the ORGANON as follows:

YEARS	ORGANON ISSUE
1949-1955	November 1961
1956-1959	January 1966
1960-1963	January 1970
1964-1965	November 1971
1966-1967	November 1973
1968-1969	November 1975
1970	November 1976
1971-1972	November & December 1978

In this manner, a continuous statistical se-

Our usual quarterly review begins on page 182 herewith.

73-76 means the annual average for the years 1973-1976. The 1977, 1978 & 1979 data are for single years only. All data are drawn from the End Use Consumption Summary table on page 173.

[1] The percentages in these columns show the usage of each type of fiber by its major end use categories. They add to 100% vertically in each case.

BEST AVAILABLE COPY

ries covering the 30-year span from 1949 through 1978 may be obtained.

FIBERS MEASURED IN THE SURVEY

The man-made fiber data are separated as Rayon+Acetate (the cellulosic fibers) and Other, which are the non-cellulosic fibers plus textile glass fiber. Except for carpets, no separation of the data by generic type within the end uses is shown. For a description of the man-made fibers included, see footnote (2) under General Notes on page 175.

The cotton end use data cover raw cotton. Cotton waste and cotton linters poundages are excluded, except as described in the following section on waste.

The wool data cover both virgin and reprocessed and reused wool.

In all cases, the objective is to measure the amount of raw fiber required to produce the end use item concerned.

Silk, linen, jute, sisal, etc., are used in many of the products covered by the survey. But no poundage data for these fibers are included in the tables on pages 174-180. For comparison purposes, however, the total imports of these fibers are presented in the lower table on page 171. Further reference to these fibers is made in the General Notes on page 175.

WASTE FIBER COVERAGE IN THE SURVEY

Textile fiber waste is handled three different ways in the survey. First, end uses which employ waste fiber, either wholly or in part without preliminary processing, are not included, e.g., furniture stuffing, mattress felts, punched or needled felts for carpet & rug underlays, pressed wool felts, some nonwoven fabrics, etc.

Second, for certain end uses which utilize both new fiber and the fiber derived from processed waste, the poundages shown have been calculated so as to exclude the waste component insofar as possible, e.g., the cotton waste in Towels & Toweling (Item 48), Twine (Item 73), etc.

Conversely and third, waste which has

1. Mill Consumption is taken from page 28 of the March 1980 ORGANON issue plus subsequent revisions.
2. Man-Made staple includes waste.
3. Imports are taken from page 29 of the March issue and comprise semimanufactured goods; see the footnotes there.
4. These poundages of reprocessed and reused wool, as well as wool consumed on the cotton spinning system, are not included in the mill consumption series for wool (see page 36 of the February 1970 ORGANON). However, they are considered here as part of the available supply of wool as shown in the table below.

SOURCE: U.S. Census Bureau.

Because these fibers are not grown in the United States (flax production is nominal), imports are taken as the total available supply.

SILK. **Raw material** means raw silk plus silk waste & noils. **Semimanufactured** means spun & thrown silk yarns and silk fabrics. **Finished goods** are mainly scarves, handkerchiefs, blouses and laces.

LINEN. **Raw material** includes hackled and unhackled flax, noils, tow & straw. **Semimanufactured** includes linen yarn, sliver & roving. **Finished goods** *are mainly fabrics,* handkerchiefs, toweling, napery & dresses.

JUTE. **Raw material** includes unmanufactured jute and jute butts. **Semimanufactured** means yarn & roving, new & waste bagging and burlap in the piece. **Finished goods** are mainly cordage, bags and webbing.

SISAL & OTHERS includes all of the *hard or leaf fibers* (e.g., abaca or manila hemp, coir, crin, henequen, istle or tampico, sisal, etc.) **Imported** into the United States plus the *soft or bast fibers* (e.g., hemp, ramie, sunn, etc.) except flax or linen and jute, which are tabulated separately here. **Semimanufactured** are chiefly coir yarns & roving. **Finished goods** *are mainly cordage and twine.*

SOURCE: Comité International de la Rayonne et des Fibres Synthetiques, Paris, France.

[1] Belgium, France, Italy, Luxembourg, Netherlands, West Germany and the United Kingdom.

[2] The percentages in these columns show the share of each fiber in the specified end use each year. They add horizontally to the 100% shown in each of the Grand Total columns.

[3] The percentages in these columns show the share of each fiber in the various end uses. They add vertically to the 100% shown under Total End Use Consumption columns.

[4] Excludes olefin film fiber and textile glass fiber.

[5] Includes acetate tow for cigarette filters.

COMPARISON OF EUROPEAN AND U.S. DATA

The tables above and opposite show the end use comparisons between western Europe (courtesy of CIRFS) and the United States by the major categories. Although cotton holds a similar market share in both areas, wool has a 12% share of the western European market compared with a 1% share in the U.S. Correspondingly, the man-made fibers have a 62% share of the market in western Europe compared with 73% in the United States.

[1] The percentages in these columns show the share of each fiber in the specified end use each year. They add horizontally to the 100% shown in each of the Grand Total columns.

[2] The percentages in these columns show the usage of each type of fiber by its major end use categories. They add vertically to the 100% shown under Total End Use Consumption.

(Continued from page 170)

been processed into usable spinnable fiber is included in the poundages shown for Blankets (Item 46), Carpets & Rugs (Item 50), Drapery & Upholstery (Item 52) and a number of other applications. In these products, fiber derived from waste by preliminary processing, and especially the man-made fiber poundages, is a significant and measured part of the total end use.

OUTLINE AND COVERAGE OF THE SURVEY

The tabulations on pages 174-180 show the poundages of the itemized textile fibers consumed in the production of the named end use products in United States establishments. Because they are not manufactured in domestic mills, the substantial imports of finished products, such as apparel, blankets, table-

NOTES FOR APPAREL ITEMS ABOVE

1. For all lettered and general footnotes to this table, see notes on page 175 opposite.

40. SHEER HOSIERY (W) includes full-fashioned & seamless full-length, pantyhose, knee-highs and surgical hosiery. Bodywear is in Items 35-39.

19 41. ANKLETS & SOCKS (MW) includes men's and women's foot socks, anklets and nonsheer knee-high hose. Also includes men's midcalf and surgical hose.

8 29. SWEATERS (MW) includes knitted sweater shirts, coats, jackets and related accessories. Also note Item 57.

57. CRAFT & HANDWORK YARNS includes yarn and thread for crocheting, darning, embroidery, mending, hand knitting, etc. The item does not include sewing thread (Item 72). Olefin yarn for macramé is in Miscellaneous Industrial.

16-18 UNDERWEAR & NIGHTWEAR (M) includes undershirts, shorts & briefs, sleep coats, pajamas, nightshirts, thermal underwear, etc.

35-39 UNDERWEAR, NIGHTWEAR, BRAS AND FOUNDATIONS. The underwear and nightwear component includes full and half-slips, panties, pettipants, camisoles, vests, briefs and thermal underwear as well as nightgowns, sleep & lounging pajamas, sleep coats, peignoir & robe sets with nightgowns or pajamas, negligees and bedjackets. Includes bodywear and all children's and infants' underwear & nightwear. **Excludes** the trim, elastic webbing, apparel lace, braid or narrow fabric used in these products.

(Continued on page 175)

6

NOTES FOR APPAREL ITEMS *(Continued)*

The bras and foundations component includes bandeaux, corsets & girdles, combination & one-piece garments, garter belts, two-way stretch and surgical & maternity foundation garments.

10 31. ROBES & LOUNGEWEAR (MW) includes men's & boys' beach- & bathrobes, dressing gowns and smoking jackets, and women's beach- & bathrobes and housecoats.

54a. HIGH PILE FABRICS includes all applications (apparel, home furnishings and industrial). Apparel shell fabrics and "surface lining" garment items are included.

54b. FABRICS FOR LINING includes all man-made fiber types except high pile fabrics (Item 54a), lining-type fabrics sold as retail piece goods (see Item 55) and the lining components of shoes & slippers and luggage and handbags (Miscellaneous Other Consumer-Type). The apparel lining component of this series includes main linings, interlinings, zip-in linings (except pile), linings for pockets and waistbands as well as the acetate and nylon tricot used for laminating. Cotton drapery linings are not included here but are in Item 52. Also not included are interlinings of haircloth, urethane and nonwoven fabrics.

43. APPAREL LACE includes nets and veilings.

55. RETAIL PIECE GOODS are mainly women's apparel-type fabrics but all other types of apparel fabrics are included in addition to fabrics destined for apparel linings and home furnishings application.

56a. NARROW FABRICS includes ELASTIC AND NONELASTIC TYPES. The "narrow woven goods" made by slicing thermoplastic fiber broad woven fabrics with a hot knife to produce fused-edge narrow fabrics are not included here. NARROW FABRIC poundages for Home Furnishings and Industrial uses are shown in those sections.

OTHER APPAREL includes men's & women's work gloves and handkerchiefs. Man-made fiber used for knitted accessories such as scarves, mufflers, gloves, caps, etc., is in Items 8 & 29.

TOPWEIGHT FABRICS includes all shirts, blouses, lightweight dress and other lightweight fabrics. The fabrics generally weigh 5.0 ounces or less per square yard. Retail piece goods are in Item 55.

BOTTOMWEIGHT FABRICS includes pants, sportswear, tailored clothing, career apparel and other heavier weight fabrics. The fabrics generally weigh more than 5.0 ounces per square yard. Retail piece goods are in Item 55.

For 1973-1974 detail on Top- and Bottomweight Fabrics, see the November 1976 ORGANON, page 163.

GENERAL NOTES FOR THE END USE TABLES ON PAGES 174-180

Units are in million pounds.

c. Means less than 50,000 pounds, i.e., nominal.

-- Means that little, or none, of the fiber is used.

* When an asterisk appears, there is a footnote at the end of the table.

● Means a significant revision in the 1973-1978 data series compared with the corresponding data shown in the November 1979 ORGANON issue. Earlier years' data on the new basis are not available.

1. This number in the title of each table refers the reader to these notes.

2. Man-made fiber end use in these tables is divided between Rayon+Acetate (the cellulosic fibers) and Other (the non-cellulosic fibers plus textile glass fiber). Yarn includes monofilaments and olefin "yarn" also includes film fiber and spunbonded polypropylene. Staple includes tow & fiberfill; see Item 79a, Fiberfill, Stuffing & Flock and its footnote on page 179. All textile glass fiber is tabulated as yarn. Certain waste poundages, which are tabulated with staple, are included; see text on page 170.

The non-cellulosic fibers included in this survey, for one or more years, are the acrylic, aramid, modacrylic, nylon, olefin (polyethylene & polypropylene), polyester, saran, spandex and vinyon fibers.

d. The staple data are tabulated in the yarn column.

e. The yarn data are tabulated in the staple column.

r. This datum shows a significant revision compared with the November 1979 ORGANON data.

When textile glass fiber is included in an end use, the word "Glass" appears in the lower left corner of the end use box, together with the annual consumption data for 1973-1979. These glass fiber poundages are included with non-cellulosic yarn in that end use and in the section totals.

When silk, linen, jute, sisal, etc., are consumed in an end use, in addition to cotton, wool and the man-made fibers, the fiber is named in the middle left of the end use box. But no poundage data for such fibers are included in either such end use or in the section totals.

As described in the footnotes to Items 54a and 54b above, apparel linings, pockets and such are tabulated in Items 54a and 54b and not with the applicable garments.

In the Apparel table, the sex and age classifications used are those of the U.S. Census Bureau. Thus **M** means Men's plus Boys' and **W** means all other persons, i.e., Women's, Misses', Juniors', Girls', Children's & Infants'.

NOTES FOR HOME FURNISHING ITEMS ABOVE

1. For all lettered and general footnotes to this table, see page 175.

HOME FURNISHINGS. These data cover the use of each item not only in homes, but also in offices, hotels, institutions, etc. For certain transportation uses, note Items 50a, 63 & 64.

None of the poundages tabulated include any cotton stuffing or filling materials in items such as furniture, pillows, mattresses, comforters & quilts, sleeping bags, seat padding, etc. For the man-made fibers, however, stuffing & fiberfill is tabulated in the Industrial section. Note text page 170 regarding the inclusion of certain man-made fiber waste poundages here. Certain felt poundages are in Item 70.

45. BEDSPREADS includes tailored & throw spreads, both tufted & woven, as well as the backing. QUILTS includes comforters and their outer shell; quilted pads are in Item 47.

46. BLANKETS & BLANKETING includes woven, knitted, needle-punched and flocked full-size and crib blankets and electric blanket shells, as well as the woven acetate or nylon filament yarn bindings thereof. Sizable poundages of rayon, acrylic, nylon & wool waste are included here.

47. SHEETS includes pillowcases. OTHER BEDDING includes the outside cover of quilted pads, mattress pads, mattresses & innersprings, civilian cots and sleeping bags. Mattress felts are in Item 70. The man-made staple poundages here are mainly polyester for sheets and rayon & polyester for bed ticking. The man-made filament is chiefly polyester for bed ticking.

48. TOWELS & TOWELING includes woven hand, bath, dish towels, etc. Nonwoven towels, such as "Handi-wipes" and industrial wiping cloths, are in Item 61. The large cotton waste poundage used in these products is not included.

(Continued on page 177)

(Continued on page 177)

56b. NARROW FABRICS includes only Home Furnishings Applications. See the Apparel and Industrial sections for Narrow Fabrics in those applications.

50. CARPETS & RUGS (TOTAL) is the sum of 50a & 50b.

50a. FACE YARNS. Tufted includes broadloom & roll goods, transportation carpeting, scatter rugs, bath mats and "grass." Woven includes carpets such as Axminster, Velvet, Wilton, etc. Knit goods are mainly scatter rugs. Needle-punched are the indoor-outdoor carpets. Item 50a does not include braided, hooked or woven twisted paper carpets.

By-fiber detail on the poundage of fibers used in carpet face yarns is given in the table on page 176 and continued to the upper right. The lower table to the right and the table on page 179 show the type of carpet produced and the calculated total carpet yardage by type.

The method used to develop these carpet face yarn data varies somewhat from other products in this end use survey. For all fibers, it is intended that the data show fiber consumption at the carpet mill production level each year.

Man-Made Fiber Yarn. Producers' shipments of textured nylon, olefin & polyester filament yarn, plus olefin monofilament and film fiber, to carpet manufacturers were added to the imports of textured nylon carpet yarn to obtain the available supply of face yarns. When a sizable increase in this available figure was shown, an adjustment was made so as to reflect that part of the estimated increment poundage going into inventory plus goods-in-process (deducted from available and not tabulated here), the residual poundage being that actually used in carpet production, which figure is presented here. This yarn increment (decrement) was taken as a 6-week supply, thus involving a deduction (addition) of 12% each year.

For example, producers' shipments of non-cellulosic face yarn to carpet manufacturers were 756.7 million pounds in 1978 and 817.8 million pounds in 1979, an increase of 61.1 million pounds. Assuming that there were no imports in either year, 12% of this increment (7.3 million pounds) was then subtracted from the shipments to yield the 1979 "usage" figure of 810.5 million pounds.

Man-Made Fiber Staple. Producers' shipments of staple, tow and waste to the carpet industry were added to staple imports to obtain the available supply of face yarns. The inventory plus goods-in-process increment (decrement) principle was applied, as described above, on the basis of an 8-week supply, i.e., 15% of the increment (decrement) was deducted (added) to obtain the data presented.

Wool. The wool consumed in face yarns is carpet-class including re-processed. The division of this poundage as between tufted, woven and knit was calculated based on Census data. Note the December 1979 ORGANON, page 199.

Cotton. The cotton face yarn data presented are those of Census Report M-22Q, increased by an estimated 10%.

50b. CARPET BACKING FIBERS. Here the approach is similar. The man-made fiber producers' shipments of fiber for carpet backing were used, with a goods-in-process increment (decrement) adjustment.

The R+A Yarn of Item 50b is industrial rayon used for woven carpet chain warps. The Other Yarn is olefin (monofil+film fiber+spunbonded) and small poundages of nylon & polyester filament yarn. The Other Staple is olefin only.

The substantial poundages of jute used as woven primary & secondary carpet backing, as well as the jute yarn used in the warp of woven carpets, are not tabulated in Item 50b. Nor does Item 50b include the sizable poundages of wool, hair and jute used in carpet and rug pads and cushions.

CARPET YARDAGE. The table on page 175 shows the calculated carpet yardage production by type of carpet compared with Census carpet sales for recent years. The lower table to the right presents the same tufted and needle-punched yardages together with a breakdown of the kind of fiber used in the primary backing thereof.

The correlation between calculated primary+secondary jute yardages consumed, and the yardage of imported jute cloth over 100" wide, will be noted. The usage was 97% of said imports over the recent 7-year period. Also see the footnotes to that table.

51. CURTAINS includes lace and other types (principally woven), i.e., cafe, tiered & cottage; ruffled; shortie drapes and tailored. Shower curtains are in Other Home Furnishings.

52. DRAPERY & UPHOLSTERY includes furniture slipcovers and vinyl-coated cotton fabrics for upholstery. The olefin & saran webbing for outdoor furniture is now included under Narrow Woven Industrial (Item 56c). Also includes the backing & headers of drapery fabrics. The cotton data include cotton drapery linings.

OTHER HOME FURNISHINGS includes woven & lace napery, such as tablecloths & napkins, doilies, etc., as well as the cotton in window shades. For the man-made fibers, it includes insect screening & netting. Wall-covering fabric is in Miscellaneous Industrial.

NOTES FOR INDUSTRIAL & OTHER CONSUMER-TYPE ITEMS ABOVE

1. For all lettered and general footnotes to this table, see page 175.

56c. NARROW FABRICS here includes woven labels, industrial webbing, shoelaces, tapes (venetian blinds & industrial), transportation seat belts, auto windlace, channeling & trim, and outdoor furniture webs. These figures exclude transmission & conveyor belting (in Item 67); friction tape and the braided narrow fabric used in electrical applications (in Item 69); and gummed cotton tape (in Item 76).

61. MEDICAL, SURGICAL & SANITARY includes bandages, gauzes, adhesive tapes & plasters, sanitary napkins & tampons, cotton diapers, rayon disposable diapers, surgical gowns and packs. Medical sutures are tabulated in Item 72. Surgical hosiery is in Items 19 & 40. Not included here is cotton waste & linters nor any nontextiles used for filling materials.

63 & 64. TRANSPORTATION FABRIC includes auto seat upholstery & slipcovers, sidewall, headlining (except textile glass in Item 77) and sheeting. The cotton poundages include the knit and woven fabric used as the backing for

(Continued on page 179)

vinyl sheeting. The item includes convertible auto tops & replacements thereof, as well as upholstery used in other kinds of transportation, such as airplanes, railroad & subway cars, buses, etc. It does not include seat padding, transportation rugs (in Item 50), window channeling (in Item 56c), flocking, tassels, trim, etc., or the textile glass fiber used in reinforced plastic seating for subways, buses, etc. (in Item 77). Starting in 1978, the man-made fiber used for substrates for automotive fabric is included in Item 75.

65. TIRES includes all types, i.e., automobile, truck, tractor, off-road, bicycle, etc. The data include tire cord & tire cord fabric, chafer and other tire components, i.e., flipper fabric, breaker strips, bead wraps, etc.

The data include imports of tire yarn, cord & fabric and also cover any poundages subsequently exported in cord or fabric form. The glass figures represent uncoated yarns.

The consumption of steel tire cord for the years 1973-1979 inclusive is estimated as follows: 60.1, 97.3, 117.5, 140.0, 182.0, 182.0 & 180.0. However, these poundages are **not included** in Item 65 above.

66. HOSE includes fire, chemical, fuel, etc. Does not include braided vacuum cleaner hose.

67. BELTING includes flat conveyor & transmission belts (both rubberized and nonrubberized) and V-belts.

69 & 77. ELECTRICAL APPLICATIONS & REINFORCED PLASTICS. The cotton poundages are estimated.

Electrical Applications includes electric wire insulation & covering of all kinds plus friction tape and cable wrap, stuffing & identification. The total fiber consumed does not reflect the increased use of plastic and other nonfibrous coatings, of course.

Reinforced Plastics means high- and low-pressure laminates used in the manufacture of construction materials (corrugated & flat sheet, plumbing accessories, etc.), process equipment (tanks & containers, pipes, ducts, etc.), transportation uses (aircraft, autos, trucks, etc.) and marine, missiles, molded electrical parts, housing, seating, trays, etc. Flexible laminates of cotton are tabulated by end use, e.g., vinyl-supported upholstery fabric in Item 63, etc.

70. FELTS includes wet & dry papermakers' felts, mattress felts and cushioning & wicking felts. Apparel felts (e.g., for shirts) are classified by apparel products. Patio and similar "felts" are in Item 50a. Laundry press pads and flatwork ironer pads are in Miscellaneous Industrial. The wool poundage includes some felts used in filtration (recorded here and not in Item 71), but excludes the substantial amounts used in pressed felts.

71. FILTRATION includes woven and nonwoven filters for wet & dry filtration, including tea bags. The small wool poundage used in the copper refining industry is included in Item 70.

The fiber used in cigarette filtration is **not included** in this end use or in the Industrial Uses totals.

72. SEWING THREAD includes home sewing and industrial & weight goods, as well as medical sutures.

73. ROPE (braided & twisted), CORDAGE (under 3/16"), FISHLINE, ETC., includes hawsers, baler or harvest twine, clothesline, tying twine, etc., as well as fishnets, seines & netting twine.

74. BAGS & BAGGING. The man-made Other Yarn is nylon mailbags plus olefin leno mesh & close-woven bags, including sandbags; also includes olefin bagging for wool bales. Carpet backing bale wrap is in Other Industrial.

75. COATED & PROTECTIVE FABRICS includes, for the man-made fibers, tents & tarpaulins, as well as the substrates for vinyl, rubber or urethane coating, lamination or impregnation. Examples of specific end uses covered include parachutes, deceleration chutes & tow targets, awnings, beach, garden & tractor umbrellas, inflatable dunnage & cushions, air-supported structures & automotive air-spring diaphragms and boat & pool covers.

The cotton poundages include awnings, boat covers, tarpaulins and tents. **Not included** here are the cotton poundages used for vinyl substrates; such poundages are tabulated with their appropriate end use, i.e., transportation upholstery (Items 63 & 64), upholstery (Item 52), etc. Man-made fiber surfaces for recreational fields are not included in this survey.

76. PAPER & TAPE REINFORCING includes gummed and pressure-sensitive tape, as well as nonwoven bonded structures for paper, tape and ribbon reinforcing.

79a. FIBERFILL, STUFFING & FLOCK includes all applications (Apparel, Home Furnishings & Industrial). Both graded fiber and waste are included. The consumption of polyester staple & tow in fiberfill for the years 1973-1979 inclusive, was: 134.6, 126.8, 138.1, 152.8, 176.8, 198.2 & 239.6. For the same years, use of polyester waste for stuffing and filling materials was: 44.5, 34.0, 42.3, 54.6, 59.1, 41.5 & 41.7.

79b. UNALLOCATED NONWOVENS means all nonwoven poundages remaining after the identifiable nonwoven end uses, such as medical, surgical & sanitary; filtration; coated & protective fabrics; and paper & tape reinforcing, have been calculated.

MISCELLANEOUS INDUSTRIAL & OTHER CONSUMER-TYPE PRODUCTS.

Miscellaneous Industrial includes the cotton for abrasives, book binding, tobacco cloth; woven wiping cloths and wall-covering fabrics. For the man-made fibers, it includes poultry & agricultural cloth, mop yarns, bale wrap, tire liner, laundry supplies, olefin yarn for macrame, and asbestos carrier fiber.

Miscellaneous Other Consumer-Type Products includes the cotton for shoes & slippers as well as luggage & handbags.

(Continued from page 177)

FOOTNOTES TO TABLE AT LEFT

1. The weight of primary backing per square yard has decreased over the years. Currently it is about 10 oz. for cotton, 8 1/2 oz. for jute and 3 1/2 oz. for olefin (polypropylene).

2. Olefin includes polypropylene yarn, staple, spunbonded, monofil and film fiber.

3. The secondary jute backing is chiefly for tufted goods. No account is taken here of cushion backings such as foam rubber, vinyl, etc.

4. Imports over 100" wide under Census code 335.4040. The poundage data were multiplied by factors varying from 2.2 to 2.4 to obtain the square yardage data shown. While some of this wide jute cloth is used in other applications, e.g., brattice cloth, by far the largest usage is in carpet backing.

NOTES FOR EXPORT ITEMS ABOVE

1. For all lettered and general footnotes to this table, see page 175.

These exports do not duplicate the end use poundages that are reported in Items 1 through 79. Apparel items are not tabulated here because they already have been counted as the fabric was cut, i.e., they are counted only once regardless of the subsequent place of sale or consumer use.

Similarly, fabrics for blankets, sheets, upholstery & draperies, carpets, etc., are excluded since they are measured at the mill level as an end use.

The exports of man-made fiber filament yarn+monofilaments, staple, tow, etc., are not tabulated in this section because these products are not a factor in U.S. mill consumption.

On the other hand, the two export items are recorded because, while they were processed or fabricated in U.S. mills, they were exported before reaching the point at which end use is measured.

These data agree with the corresponding figures on page 29 of the March 1980 ORGANON, as revised.

80. YARN, THREAD, ETC. consists of sliver, tops & roving; plied, thrown and spun yarn; sewing thread and handwork yarns; cotton twine and cordage; and advanced wool.

81. WOVEN & KNIT FABRIC consists of broad & narrow woven fabrics and knit cloth, except that cotton also includes table damask and tire cord & fabric. See footnote 7 on page 29 of the March 1980 ORGANON.

82. TIRE CORD & CORD FABRIC. The data shown in this series in previous ORGANON issues have been incorporated into Item 65, Tires. See footnote 65 on page 179.

(Continued from page 173)

cloths, rugs, etc., are not included in the survey poundages presented herewith.

The method employed for estimating the end uses of man-made fibers differs from that used for the natural fibers. For the man-made fibers, the data are based on producers' domestic shipments plus imports of fiber, yarn and semimanufactured products.

In the case of cotton, the data of the National Cotton Council were used extensively. For wool, government data plus estimates from other trade sources were employed.

END USE VS. AVAILABLE SUPPLY

A comparison of mill consumption plus semimanufactured imports (Available Supply) with end use consumption is presented in the center table on page 171. While more specific reasons which affect the correlation between these series are described in the following sections, some general remarks are presented here.

Cotton. End Use is lower than Available for most years; the same situation obtains in the National Cotton Council's survey data. Two reasons for this are advanced by the Council: a) many small uses are not included in the survey and b) estimates of materials consumed are based on "typical" cotton yarns and fabrics and not on the actual weights of every type of yarn and fabric consumed in the various end uses.

Timing and inventory changes also play a significant role. For example, some raw cotton correctly reported as "consumed" by the Census Bureau in the calendar year 1978 was not actually incorporated into end products until 1979 because of the time lags and inventory fluctuations involved in moving from raw fiber in the bale to a finished garment or other textile product. Similarly, an indeterminate amount of cotton consumed in 1979 was not embodied in finished products until 1980.

As noted, the cotton series herewith are mainly those of the National Cotton Council as presented in its annual survey "Cotton Counts Its Customers" (1980 and earlier editions).

Wool. Blends of wool with other fibers are common in many end uses, but little information is available on the fiber composition of these blends. Thus relatively reliable measures are available mainly on the wool poundages used in Home Furnishings (blankets and carpets) and such Apparel items as Retail Piece Goods and Craft Yarns.

These poundages were deducted from the Available Supply in the page 171 table and the residual poundages were then attributed to Apparel. Usage in individual apparel items for the years 1973-1979 was calculated by correlating the data of Census reports MA-23A and MQ-22T on Apparel and Broad Woven Goods respectively.

Man-Made Fibers. As will be seen, there is relatively good correlation between End Use and Available.

The fluctuations of producers' domestic shipments, as well as imports, from year to year are significant. In years when there is a large increase in domestic shipments plus imports of fiber (Available Supply), it is probable that some of the increase went into mill and manufacturers' inventories rather than directly into the end uses. Both warehouse inventories of yarn and staple and goods-in-process inventories would be involved. For example, it is likely that some of the large increase in the Available Supply between 1976 and 1977 was absorbed in inventories at various stages of the production process. In a period when Available Supply falls sharply (1973-1974 and 1974-1975, for instance) the movement is reversed. In a period of slower activity, mills and manufacturers reduce their warehouse inventories and work-in-process to reflect the lower level of activity.

However, the end uses of only two products were calculated to take into account these annual increment or decrement poundages. These are carpet face and primary backing fibers (see footnotes on page 177).

UNIT PRODUCTION VS. FIBER CONSUMED

The survey attempts to show the poundage of raw fiber which had to be put into process in order to manufacture the end products itemized. Thus no direct comparison can be, or should be, made between the poundages of the fibers consumed, as recorded here, and the finished or "shelf" weight of those end products by fiber.

Several reasons for this disparity are discussed on pages 167 and 170 of the November 1976 ORGANON issue.

THE UTILITY POUNDAGE CONCEPT

The expression "Utility Poundage" was originated by the Textile Economics Bureau several years ago.

The principle involved is that textile fiber consumption, in terms of the consumers' use, cannot be accurately measured in absolute pounds when one fiber is compared with another. Among the variables taken into account are the different losses involved in spinning and processing the fibers and the differences in typical fabric weights of products made of the various fibers, as described. Because of these variables, in most cases a pound of man-made fiber replaces more than a pound of natural fiber. However, no means of quantifying this difference in any reliable manner is available. Therefore, all figures in this end use study are on an actual rather than a Utility Poundage basis.

LIMITATIONS OF THE SURVEY RESULTS

The statistical results of an end use survey can be only approximations at best. But when the data are viewed as one fiber relative to another, and not as absolute values, then they may be regarded as measuring the long-term trend results of competition between the fibers.

The data are given in millions of pounds and include one decimal place to show hundred thousand pounds. This device is employed not to show great accuracy, but rather to take into account some small poundages of fibers in such end uses as Apparel Lace (Item 43) and still allow the compilation to add arithmetically.

U.S. APPAREL MARKET

The table on page 183 shows estimates of the 1976-1979 apparel market in the United States in terms of pounds on a raw fiber basis.

It is also based on available supply rather than consumption per se. The table also shows how the Bureau arrives at the apparel totals on page 174.

In the case of the man-made fibers, the data on domestic shipments of fiber by end use as reported to the Bureau by U.S. producers are the starting point. We then estimated that portion of known fiber imports which go to the apparel sector. Thus, the total of domestic shipments plus fiber imports is the rough equivalent of mill consumption for cotton and/or wool.

The next step was to estimate that portion of known fabric imports which would be slated for the apparel sector at the cutting level and add it to the total above. Conversely, known fabric exports (see Item 81 on page 180) were deducted from the total, except for estimated nonapparel poundages.

The resulting total is the apparent consumption of fiber and fabric at the cutting level. By adding to this total the net imports of garments (see page 29 of the March 1980 ORGANON issue), we arrived at the total available for domestic consumption.

For the cotton and wool data, we then added to the mill consumption (i.e., fabric from U.S. mills) the imported yarn and fabric for nonapparel uses. For wool, the nonapparel applications were negligible. Here again, we arrived at the apparent consumption of wool and cotton at the cutting level.

By adding the net imports of garments, we determined the total available to U.S. consumers.

Thus the grand total of cotton, wool and man-made fiber products available for apparel on a domestic consumption basis was calculated to have been 5,672 million pounds in 1979, as compared with 5,855 million in 1978.

It is further calculated that imported yarn, fabric and garments constituted about 21% of the available supply of the U.S. apparel market in 1979. This compares with about 25% in 1978.

QUARTERLY U.S. MAN-MADE FIBER REVIEW

Output of non-cellulosic yarn+monofilaments (except saran and spandex) totaled 816.6 million pounds, a decrease of 73.2 million pounds or 8% below the previous quarter and 18% below that produced during the corresponding 1979 quarter. For the first three quarters of 1980, output of these fibers was 2,723.8 million pounds or 12% below that of the first nine months of 1979.

Production of non-cellulosic staple+tow+fiberfill during the most recent quarter totaled 959.4 million pounds, an increase of 19.9 million pounds or 2% over the previous quarter but a 10% decrease from the corresponding 1979 quarter. Output during the first nine months of 1980, at 3,004.3 million pounds, was 5½% less than that of the first three months of 1979.

Shipments of non-cellulosic yarn+monofilaments (except saran and spandex) in the latest quarter were 884.6 million pounds, slightly less than the 885.8 million pounds shipped the previous quarter but 11% below the deliveries of the corresponding 1979 quarter. Shipments of these fibers for the first three quarters of 1980, at 2,788.3 million pounds, were 9½% below those of the corresponding 1979 period.

Deliveries of non-cellulosic staple+tow+fiberfill during the most recent quarter totaled 998.3 million pounds, 4% more than the 960.6 million pounds shipped during the second quarter 1980, but 5½% less than the corresponding 1979 period. For the first nine months of 1980, shipments totaled 3,030.0 million pounds, 5½% less than that delivered during the first three quarters of 1979.

Third quarter 1980 textile glass fiber production totaled 183.3 million pounds, a decrease of 18% from the second quarter level. The 1979 and 1980 nine months' output of textile glass were 774.6 million pounds and 649.6 million pounds respectively, a decrease of 16%.

July-September deliveries of textile glass fiber were 192.5 million pounds, a decrease of 1½% from second quarter 1980 shipments. Thus shipments exceeded production by 9.2 million pounds and producers' stocks decreased by the same amount to 149.7 million pounds as of September 30th.

3. See page 174 herewith.
4. Domestic shipments of man-made fibers used in calculating the apparel end uses shown on page 174.
5. Grand Total man-made fiber imports from page 140 of the September 1980 ORGANON issue less estimated poundages for nonapparel uses.
6. Total man-made fiber fabric imports from page 29 of the March 1980 ORGANON issue less estimated poundages for nonapparel uses.
7. Exports of spun yarn, thread and fabric from page 29 of the March 1980 ORGANON issue less estimated poundages for nonapparel uses.

Acetate filament yarn output last quarter totaled 77.5 million pounds, a decrease of 4.6 million pounds at 5½% from the second quarter and 1½% below third quarter 1979 levels. However, production during the first three quarters of 1980, at 239.6 million pounds, was 2% more than that of the first three quarters of 1979.

Third quarter 1980 production of rayon staple+tow totaled 101.0 million pounds, 11% less than the second quarter this year, and 21% less than the July-September 1979 output. Output for the first nine months of 1980, at 341.3 million pounds, was 17% below that of the corresponding 1979 period.

OCTOBER SHIPMENTS CONTINUE STRONG

October shipments of non-cellulosic fibers (except saran & spandex) totaled 721.8 million pounds, 5½% above September shipments of 683.9 million pounds and at their highest level since October 1979. However, shipments for the first ten months of 1980, at 6,540.1 million pounds, were 7% below those of January-October 1979.

Non-cellulosic filament yarn+monofilaments (except saran & spandex) totaled 340.6 million pounds in October, 5½% above September's level of 323.2 million pounds. However, year-to-date shipments at 3,128.9 million pounds were 9% below that of the corresponding 1979 period.

Producers' shipments of non-cellulosic staple+tow+fiberfill for October totaled a record 381.2 million pounds, an increase of 5½% over the previous month's shipments of

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

[1] Data for rayon and "Other" non-cellulosic yarns (chiefly saran & spandex) are available annually only; see pages 12 & 13 of the February 1980 ORGANON issue.

[2] Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

[3] Yarn imports include singles and plied.

[4] Acetate staple+tow data are available annually only; see pages 12 & 13 of the February 1980 ORGANON issue.

[5] These figures are composites of the nylon, acrylic+modacrylic and polyester staple imports, i.e., Commodity Numbers 309.4338, .4342 & .4345.

360.7 million pounds and 0.5 million pounds above the previous record of 380.7 million pounds shipped during October 1979. However, shipments for January-October 1980, at 3,411.2 million pounds, were 5% below those of the same 1979 period.

Acetate yarn shipments last month totaled 25.0 million pounds, 8½% above September's deliveries. However, year-to-date shipments of 258.7 million pounds are running 3½% behind last year's level.

October shipments of rayon staple+tow totaled 37.9 million pounds, 2½% above September's level. However, on a year-to-date comparison, 1980 shipments of 380.0 million pounds are 17% behind 1979 deliveries.

SHIPMENTS BY PRIMARY TRADE OR END USE

The tables on pages 186 and 187 present a breakdown of domestic filament yarn and staple+tow shipments by primary trade or major

1. Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.
2. Small poundages of polyester are included in All Other.
3. Small poundages of olefin are included in All Other.
4. Small poundages of nylon and polyester are included in All Other.
5. Other Broad Woven except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e., industrial applications are in All Other.
6. Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.
7. Small poundages of olefin are included in All Other.
8. All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing. As of the 4th Q 1979 All Other also includes Indirect Exports.
9. These poundages are included in the total domestic area above.

end use of the most recent periods.

Shipments of filament yarn in the third quarter 1980 were slightly above the second quarter level, but well below the level of a year ago. Shipments of polyester yarn to the knit trades (both circular and flat) showed a quarter-to-quarter improvement offsetting the decline in shipments to the broad woven trades.

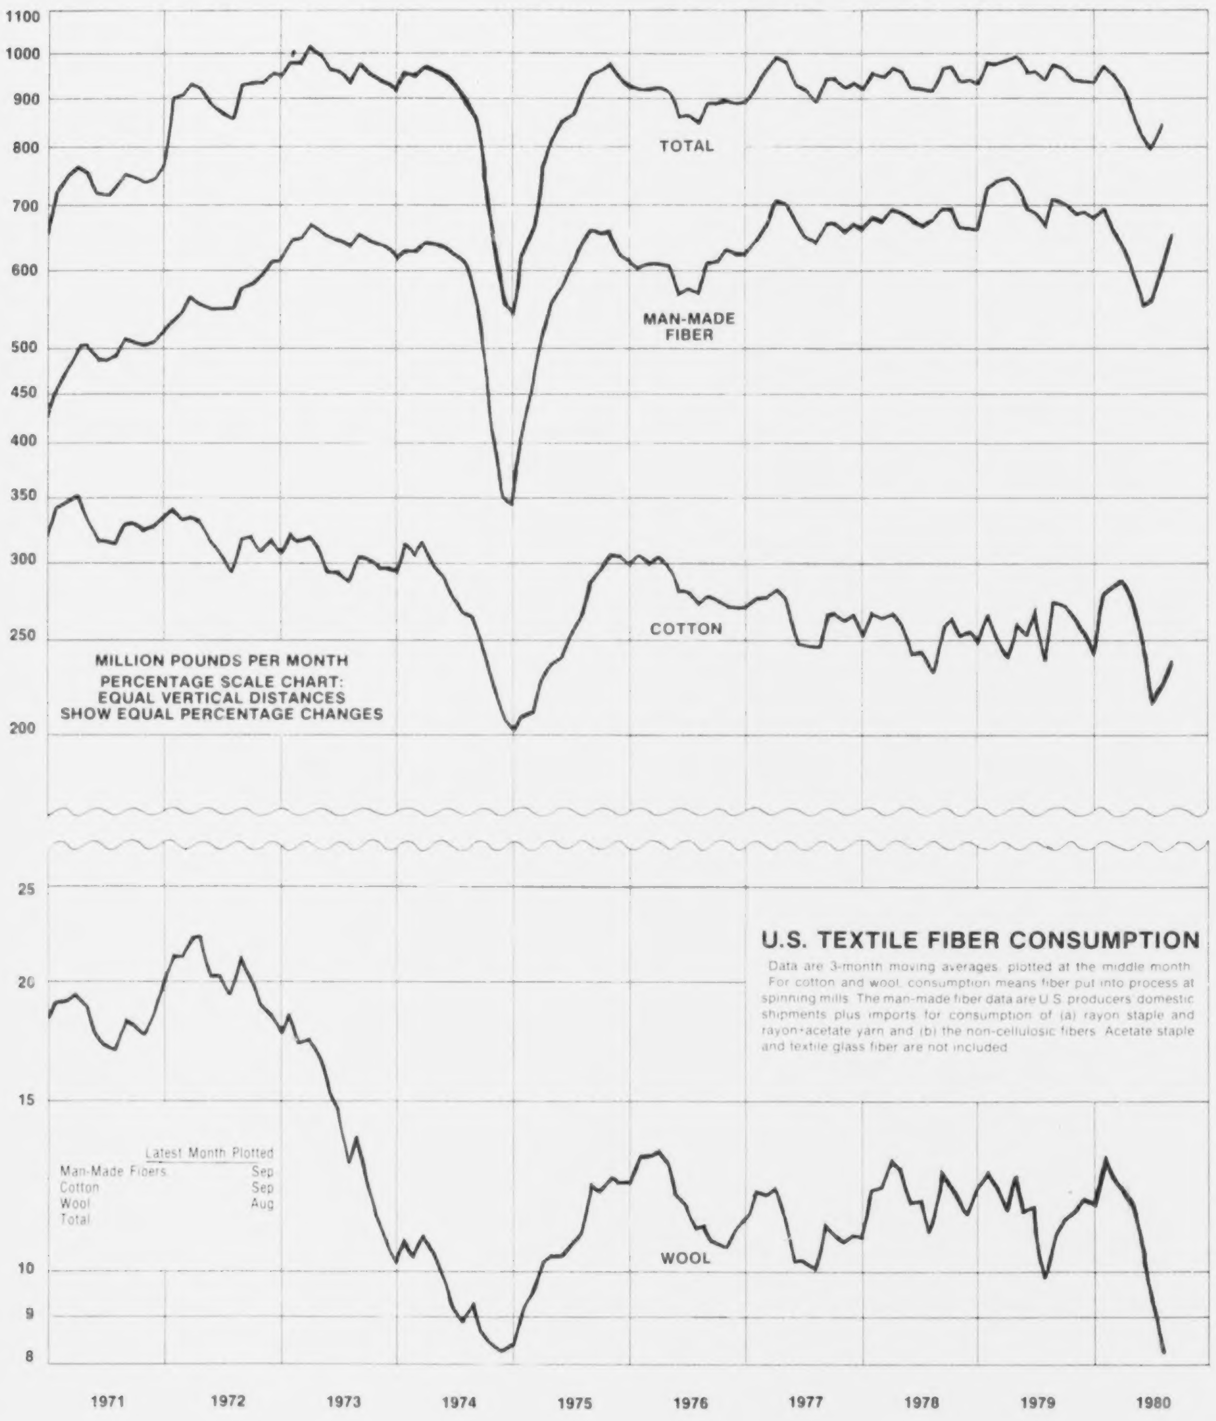
1. Olefin poundages are included in All Other.
2. Rayon and nylon poundages are included in All Other.
3. Nylon poundages are included in All Other.
4. Rayon and acrylic poundages are included in All Other.
5. Wet & dry laid and needled batts only.
6. Acrylic poundages are included in All Other.

Deliveries of staple+tow during the third quarter were only slightly above the second quarter, but well below the level of third quarter 1979. Shipments of nylon staple to the carpet trades and polyester staple+tow to the fiberfill and nonwoven trades showed improvement over second quarter levels. However, deliveries of acrylic+modacrylic staple +tow to the knit trades, polyester staple+tow to the broad woven trades and rayon staple+tow to the nonwovens trades all show declines from those of the previous quarter.

Drawing the yarn and staple data from the tables above and opposite together, the distribution between the three market segments is as follows (million pounds):

	1976	1977	1978	1979	9 MOS 1980
Apparel	2959	3186	3165	3254	2352
Home Furnishings	2362	2693	2887	2998	1926
Industrial	1543	1645	1814	1973	1300
TOTAL	**6864**	**7524**	**7866**	**8225**	**5578**



U.S. TEXTILE FIBER CONSUMPTION

Data are 3-month moving averages, plotted at the middle month. For cotton and wool, consumption means fiber put into process at spinning mills. The man-made fiber data are U.S. producers domestic shipments plus imports for consumption of (a) rayon staple and rayon+acetate yarn and (b) the non-cellulosic fibers. Acetate staple and textile glass fiber are not included.

U.S. EXPORTS OF MAN-MADE FIBERS

SOURCE: U.S. Census Bureau Report.

1. Includes thrown, singles and plied yarn.
2. Includes an undetermined amount of rayon tire cord and cord fabric.
3. Includes an undetermined amount of non-cellulosic tire cord and cord fabric.
4. Includes zero twist yarns.
5. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

1. Year to date totals except for stock, which is the latest month's data.

2. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

3. Producers' total domestic plus export shipments.

4. Rayon yarn data are available annually only; see page 13 of the February issue.

5. Data for nylon includes aramid.

6. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

7. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

8. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

9. Saran and spandex data are not included in these totals. See page 13 of the February issue for annual data on these yarns.

10. Acetate staple+tow data are available annually only; see page 13 of the February issue.

ANNUAL BOUND ORGANON EDITION

A limited number of bound copies of the 1980 TEXTILE ORGANON, Volume LI, will be available at $50.00 each (postpaid). Remittance with the order please.

FEATURING MAN-MADE FIBERS

VOL. LI • NO. 12

DECEMBER 1980

MONTHLY REVIEW

CURRENT U.S. MAN-MADE FIBER PRODUCING CAPACITY (MILLION POUNDS PER YEAR) AT 12,029 IS EXPECTED TO INCREASE 5% TO 12,660 BY NOVEMBER 1982. THE LATTER TOTAL WILL BE COMPRISED OF 914 CELLULOSIC FIBERS, 10,115 NON-CELLULOSIC FIBERS AND 1,631 TEXTILE GLASS FIBER. PG 194

A REVIEW OF THE U.S. AND WORLD WOOL SITUATION IS PRESENTED. DATA ARE SHOWN ON PRODUCTION, CONSUMPTION, STOCKS, EXPORTS, IMPORTS, PRICES, ETC. PG 196

NOVEMBER SHIPMENTS DOWN 4%

November deliveries of non-cellulosic fiber (except saran and spandex) at 690.9 million pounds were 4% less than that shipped last month. January-November 1980 shipments of 7,230.6 million pounds were 6½%, or 508.9 million pounds, less than the 7,739.5 million pounds delivered during the January-November 1979 period.

Last month's deliveries of non-cellulosic yarn+monofilaments (except saran and spandex) totaled 331.5 million pounds, 2½% less than the 340.2 million pounds shipped in October and 2½% less than the 340.2 million pounds shipped during the corresponding 1979 month. January-November shipments of 3,460.0 million pounds this year were 8½% behind the 3,784.2 million pounds delivered during the corresponding 1979 period.

November deliveries of non-cellulosic staple+tow+fiberfill totaled 359.4 million pounds, 5½% less than the 381.2 million pounds shipped last month and unchanged from the level of the corresponding 1979 month. Shipments for the first eleven mo[illegible] 1980, at 3,770.6 million pounds, were 4½% below the 3,955.3 million pounds shipped during the January-November 1979 period.

Following is a comparison of total November shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with October (million pounds), and the percentage change respectively: nylon industrial 40.2 & 41.9 & -4%, low denier industrial 2.8 & 3.0 & -6½%, carpet 68.8 & 70.7 & -2½%, textile 37.6 & 36.6 & +2½%, polyester industrial 25.1 & 28.2 & -11%, low denier industrial 2.5 & 2.1 & +19%, textile 97.3 & 101.9 & -4½%, olefin 57.2 & 55.8 & +2½% and the total of these fibers 331.5 & 340.2 & -2½%.

For non-cellulosic staple+tow+fiberfill, the corresponding data are: nylon 73.5 & 76.1 & -3½%, acrylic+modacrylic 61.5 & 62.8 & -2%, polyester 213.2 & 230.4 & -7½%, olefin+vinyon 11.2 & 11.9 & -6% and the total 359.4 & 381.2 & -5½%.

Shipments of acetate yarn in November were 21.8 million pounds, down 13% from the 25.0 million pounds shipped in October. For the year to date, acetate yarn deliveries are running 5% below last year.

Rayon staple+tow shipments in the latest month were 37.3 million pounds, 4% below October deliveries of 38.9 million pounds. For

BEST AVAILABLE COPY

the year to date, rayon staple+tow shipments, at 418.3 million pounds, were 17% less than that shipped during the same 1979 period.

STOCKS CONTINUE TO DECLINE

Fiber producers' stocks of non-cellulosic fibers (except saran & spandex) declined to 557.1 million pounds as of November 30th from 572.5 million pounds as of October 31st. With shipments at 690.9 million pounds during November, stocks thus represent a 24-day supply (based on a 30-day month), unchanged from October.

Following is an analysis of fiber supply (based on a 30-day month) on hand at the fiber producing level: nylon yarn 22 days; polyester yarn 28 days; olefin yarn 34 days; nylon staple 13 days; acrylic+modacrylic staple 30 days; polyester staple 22 days and olefin+vinyon staple 46 days.

For the cellulosic fibers, fiber producers' stocks stood at a 24-day (based on a 30-day month) supply for acetate yarn and a 23-day supply for rayon staple.

U.S. MAN-MADE FIBER PRODUCING CAPACITY

Last month, the U.S. man-made fiber producing industry had the capacity to produce 12,029 million pounds of fiber per year. This was a decrease of 1½% from the capacity in place one year ago. The details on recent production and capacity by fiber, as well as projections through November 1982, appear in the table on page 195.

By November 1982 total man-made fiber producing capacity is expected to expand by 5% to 12,660 million pounds annually. Non-cellulosic fiber capacity is expected to increase by 5% over the two-year span, while textile glass fiber capacity is projected to increase by 11%. Cellulosic fiber capacity is expected to increase 5 million pounds, or ½%. The summary by generic fiber group is shown in the table on page 196.

SURVEY COVERAGE & DEFINITIONS

The survey figures shown in the upper section of the page 195 table cover the man-

1. The non-cellulosic fibers included are those listed in the September ORGANON issues each year. Yarn+mono includes olefin film fiber and spunbonded polypropylene. Staple+tow includes fiberfill.

2. The acetate production and producing capacity data include diacetate and triacetate. The acetate staple+tow data do not include the large poundages for cigarette filtration.

3. Textile glass fiber, all types.

4. Grand Total Yarn means the yarn+mono shown **plus** all textile glass fiber.

5. Actual producing capacity as of the date shown.

6. Future producing capacity planned for certain dates as of November 1980.

IND means industrial yarn and monofil, i.e., 500 denier & coarser, with an Instron tenacity of 7 grams per denier or more; CARP means bulked continuous filament yarn for carpets; TEXTILE means yarn & monofil for other (textile) applications. Low denier industrial yarn is tabulated here also.

7. Olefin includes polyethylene & polypropylene. Not included here are data on spunbonded polyethylene, monofilament bristles, film fiber used for decorative or tying ribbon, etc.

8. Olefin monofil includes the circular and rectangular (ribbon) cross sections plus spunbonded polypropylene. Olefin film fiber includes slit and split or fibrillated fiber.

9. Other yarn & monofil is chiefly saran and spandex. Aramid data are included with nylon.

CAPACITY (ANNUAL RATES)

	12,029	12,660	631	5

(Continued from page 194)

made fibers in all their primary forms, i.e., filament yarn, monofilaments, polypropylene spunbonded and film fiber are tabulated as filament yarn, while staple, tow and fiberfill are tabulated as staple. The glass fiber data cover all primary forms of that fiber (yarn and strand, staple yarn and sliver, roving and cake, chopped and milled fiber and mat) although only an aggregate figure is published to avoid disclosure of individual company data. The "capacity" to produce waste is not included in the survey data.

Capacity is based on the current and projected "mix" of deniers, filament counts, packages, etc. It is emphasized that all figures refer to current and planned capacity. They are not a production forecast.

Under the survey definitions, all productive equipment which is currently, or is projected to be, in operable condition is counted as capacity, regardless of whether it is actually producing fiber at the time the capacity measurement is taken. On the other hand, equipment which is definitely scheduled for scrapping, or which has been scrapped since the last survey, is excluded from the capacity tabulation. Put another way, the capacity data reflect operable, rather than operating, capacity.

NON-CELLULOSIC FIBER CAPACITY

Non-cellulosic fiber capacity is slated for an increase of 468 million pounds over the next two years. Between November 1979 and November 1980, actual capacity in place declined by 157 million pounds. The reasons for the decline are the closures of the IRC polyester yarn plant in Painesville, OH and the Chevron nylon plant in Puerto Rico. Also, the Hercules olefin plant at Covington, VA was destroyed by fire. As of the end of the year, and thus included in the November 1980 capacity numbers, the Fiber Industries nylon plants at Shelby, NC & Greenville, SC and the Texfi polyester plants at Asheboro & New Bern, NC are scheduled to be closed.

Polyester staple capacity is planned to increase by 95 million pounds to a November 1982 total of 2,854 million pounds, whereas filament yarn capacity is projected to decline from a November 1980 figure of 2,037 million pounds to 2,029 million pounds by November 1982. The modest increase in polyester industrial yarn was more than offset by the decline in textile yarn.

In nylon, the capacity increases are aimed mostly at servicing the floor covering market. Capacity for carpet yarn is slated for an increase of 22 million pounds in the next two years, by which time it will amount to 932 million pounds. At the same time capacity for nylon staple, most of which goes into floor coverings, is slated to increase by 48 million pounds, reaching 1,039 million pounds two years hence.

Nylon textile yarn is projected to increase by 28 million pounds over the November 1980 to November 1982 period. Industrial nylon yarn capacity is scheduled to increase slightly (by 16 million pounds or 3%) in the next two years.

At present, nylon 6 represents 31% of total nylon yarn capacity, while for staple the corresponding figure is 34% for an average nylon 6 share of 32%.

Olefin fiber accounts for the majority, some 55%, of the increase in non-cellulosic fiber capacity over the next two-year period.

Olefin yarn+monofil+film fiber capacity is expected to increase by 104 million pounds and reach 1,004 million pounds by November 1982. Olefin+vinyon staple capacity is due to reach 287 million pounds by November 1982, an increase of 153 million pounds or more than double the November 1980 capacity.

AVERAGE DENIER

In polyester textile yarn, there has been a marked trend toward finer deniers. In May 1976, when average denier data were first collected, the average was 139. Thereafter, it declined to 133 in November 1976, to 126 in November 1977, to 114 in November 1979 and to 113 in November of this year. By November 1982, according to the latest projection, the average will be 112 denier.

In nylon textile yarn, the May 1976 average denier was 54 and this figure remained unchanged in November 1976. By November 1978, average denier had dropped to 53, and by November 1979 it was 51. In November 1980 the average denier was 52 and by November 1982 it is projected to be 51.

In acetate yarn, the average deniers were 89 in November 1977, 85 in November 1978, 89 in November 1979 and 88 in November this year. Two years hence, the average denier is expected to be 89.

THE WOOL SITUATION

Our annual review of the U.S. and world wool situation is presented in the following article and tables. Unless otherwise indicated, all data are on a seasonal basis. In Northern Hemisphere countries, the season coincides with the calendar year. In South America, the season runs from October first through September 30th, while in the other Southern Hemisphere countries, e.g., Australia, South Africa and New Zealand, the season extends from July first through June 30th. Seasonal data are identified by the first year of the season concerned, e.g., the Australian season running from July 1, 1979, to June 30, 1980, is referred to as 1979.

From reports of The Commonwealth Secretariat (London), it is estimated that world wool production during the 1980 season (1980-1981) will total 6,087 million pounds (greasy basis) or some 16 million pounds more than the previous season.

The table on page 198 shows the annual production of raw wool on a greasy basis in the principal wool-growing countries of the world from 1965 through the current season. In addition, certain 5-year averages are shown.

At present Australia, Eastern Europe+China and New Zealand account for 64% of world wool production; in 1935-1939 these countries were only 42% of the total. Eastern Europe+China in particular have greatly expanded their shares of world production, going from less than 8% at the beginning of the period to 26% today. The increase in New Zealand's share has been significant, but not as impressive as that of Eastern Europe+China. Australia, still the largest individual producer, also has maintained its share over the period. The most drastic drop in share has occurred in the United States, which at one time accounted for better than 11% of the total but is now down to 2%.

World production data on cotton, scoured wool and the man-made fibers (except olefin and textile glass fiber) from 1973 through 1979 were presented on page 73 of the June 1980 ORGANON issue. Changes in that table for cotton are indicated in the page 157 table of the October ORGANON. In the 1979 season, world wool production represented 5% of the 3-fiber total, with cotton being 48% and the man-made fibers 47%.

U.S. PRODUCTION AND DISAPPEARANCE

It is estimated that U.S. wool production in 1980 will be about 104 million pounds (greasy basis), the same as in the past two years.

Of this year's total, shorn wool output is placed at about 102 million pounds or slightly less than 1979. The balance of 2 million pounds this year will be pulled wool. All domestic production is apparel class. U.S. wool production has been declining steadily for many years. The stabilization in U.S. wool output results from a halt to the continuation of the long-term decline in the sheep population in this country. Thus the 1980 shearing is expected to total 13.0 million head or 3% more than the 12.6 million

WORLD RAW WOOL PRODUCTION BY THE PRINCIPAL PRODUCING COUNTRIES[1]

SOURCES: The Commonwealth Secretariat (London); The Wool Bureau, Inc. (NY); and Textile Economics Bureau, Inc., estimates.

1. Apparel plus carpet class shorn wool, as well as pulled wool and wool on skins, mostly at the shorn equivalent.
2. Calendar years for Northern Hemisphere nations; season beginning July first or October first for Southern Hemisphere countries. See text page 197.
3. Excludes Lesotho and South West Africa.
4. Includes U.S.S.R. & Romania only in 1945 and prior years. For 1946 forward, Albania, Bulgaria, People's Republic of China, Czechoslovakia, East Germany, Hungary, Outer Mongolia & Tibet, Poland and Yugoslavia are also included.
5. Includes China and Eastern European countries, except U.S.S.R. & Romania, in 1945 and prior years.
6. Five-year averages.
7. Preliminary estimates.

head sheared in 1979 which, in turn, was 1% over 1978. The 1980 average fleece weight is placed at 7.87 pounds, down from 8.02 pounds in 1979 and 8.08 pounds in 1978.

The first section of the table on page 199 shows that 1979 U.S. mill consumption of apparel-class raw wool totaled 124.6 million pounds or 3% less than the 1978 figure. Mill consumption of carpet class wool in 1979 was 9.9 million pounds, down 24% from 1978. For 1980, on the basis of nine months' actual figures, it is estimated that U.S. consumption of apparel wool will be about 120.5 million pounds, 3½% less than 1979. Consumption of carpet wool this year is estimated at 9.5 million pounds, 4% below 1979.

These consumption data cover mill consumption of shorn and pulled and other wool of the sheep on the woolen spinning system as well as the production of worsted tops. Additional but small quantities of wool are consumed on the cotton system. Finally, there is a fairly substantial amount of reprocessed and reused wool used; most of this goes into non-carpet applications.

The second and third sections of the page 199 table show the wool content of U.S. imports and exports of semimanufactured and manufactured products. The line labeled Total Disappearance is derived as mill consumption plus imports and less exports. The United States remains a net importer of wool and wool products, with the 1979 net import figure of 66.2 million pounds which is projected to remain unchanged for 1980. Expressed in terms of share of the total disappearance, net imports in 1979 were 30% of disappearance, down from 33½% last year. For further details of U.S. foreign trade in wool and wool products, see pages 28-29 of the March 1980 ORGANON issue.

1. Calendar years.
2. Estimates based on 9 months' data for mill consumption and 10 months' data for imports & exports.
3. Agrees with ORGANON's Selected Monthly Data Table.
4. Raw wool consumed on the cotton spinning system.
5. Tops includes advanced wool.
6. Includes pile fabrics & manufactures, blankets, tapestry & upholstery, press & billiard cloths, car robes, etc.
7. Includes knit fabrics in the piece and miscellaneous manufactures not elsewhere specified.
8. March ORGANON page 29 or as revised later.

U.S. WOOL PRICES AND SUPPORT PROGRAMS

The current price of $2.42 per pound for domestic fine graded territory wool for 62s (combing & staple, clean basis, on the open market at Boston) compares with $2.15 a year ago. Prices of foreign wools have also increased. As of December 5th, the price of Australian 62s was $3.02 per pound compared with $2.83 a year ago.

A government wool price support program has been in effect since April 1955 in the form of incentive payments to sheep raisers, the original purpose of which was to encourage an annual shorn wool production of up to 300 million pounds. Authorized by the National Wool Act of 1954, this program guarantees wool growers a minimum price at which they can sell their shorn wool. The Agriculture and Consumer Protection Act of 1973 extended through December 31, 1977, the Federal support program for wool and mohair. In 1978 President Carter signed into law the National Wool Act extension through 1981 as part of the Food and Agriculture Act of 1977.

For 1980, the support price for shorn wool was set at $1.23 per pound, up from $1.15 a pound in 1979. During 1979, sheep producers receiving less than $100 represented 68% of producers receiving payments but only 8% of total support payments. Producers receiving support payments of $1,000 and more represent only 5% of sheep producers receiving payments yet they received 67% of total 1979 payments.

WOOL LABELING ACT AMENDED

On July 4, 1980, the Wool Products Labeling Act was amended. The amendment requires the word "recycled" to be used instead of "reused" or "reprocessed" on labels describing the wool content of the textile product.

MOHAIR SITUATION

The 1980 U.S. fall clip is estimated to have been about 5.0 million pounds. With a carryover of 1.0-1.25 million pounds from the spring clip, total domestic supply is just over 6.0 million pounds this fall.

This fall, mohair prices were in the following ranges: kid $5.00-$5.50 a pound, young goat $3.30-$4.25 a pound and adult $3.00-$3.25 a pound. The average farm price received by farmers in 1980 is around $3.40 a pound and the support price $2.90. These two prices for 1981 are estimated to be $4.50 and $3.72, respectively.

TWO BOOK REVIEWS

CIRFS 1980 YEARBOOK

International Rayon and Synthetic Fibres Committee (CIRFS), 29 rue de Courcelles, Paris 75 008, France. 136 pages. 1980

CIRFS has recently published the 1980 edition of its statistical yearbook. This trilingual booklet (English, French & German) presents statistical data on textile fiber production, consumption and foreign trade, with particular emphasis on the man-made fibers.

Annual production data are shown by country and by cellulosic or non-cellulosic yarn or staple; those data concerning consumption are given by the main utilizing sectors. The section on consumption by secondary or end use covers all the major apparel, home furnishings and industrial uses. Also included is the EEC consumption (by generic fiber) in carpets & rugs and nonwovens, both by fiber and end use.

Imports and exports of yarn, staple, spun yarn and fabrics made of the cellulosic and non-cellulosic fibers in several countries, and in world areas, are found in the chapter dealing with foreign trade in man-made fibers. This expanded section shows the by-country detail of exports from, and imports to, West Europe, Japan and the U.S.A.

TEXTILE FIBER CONSUMPTION IN THE 70s

The table opposite is a modification of the table "U.S. Mill Consumption of Fiber and Domestic Consumption of Fiber & Products," which appears regularly in the March ORGANON issue.

The differences in the tables are:

1) The textile glass fiber totals in Column 23 have been reduced by the amount of the reinforced plastics and electrical uses (see Items 69 & 77 on page 178 of the November ORGANON issue).

2) The poundages of linen, jute, sisal and other hard or leaf fibers have been added to the silk poundages under "Other" in Columns 27 and 38.

When all textile fibers are taken into account (less the aforementioned textile glass fiber for reinforced plastics and electrical uses), it will be seen that the consumption has grown at an annual average rate of 1.2% over the past decade. This compares with a figure of 2.1% when the "other" fibers are omitted and all applications of textile glass are included.

The decline in consumption of "other" fibers (chiefly jute) has been largely offset by increased consumption of olefin fiber.

a. The man-made fiber data include textile glass fiber as shown in Column 23 in the upper section. For producers' total shipments and imports of textile glass fiber, see page 13 of the February 1980 issue.

SOURCES OF DATA, ARRANGED BY COLUMN NUMBER ( )

All Census import commodity numbers are those of January 1978; export commodity numbers are those of January 1978.

1, 4, 7, 12, 15, 18 & 23 - February 1980 ORGANON.

2 - Import Classes 309.0310, .0610. .2000, 310.0106, .0130, .0206, .0230, .0510 & .0610.

5 - Import Classes 309.3010, .3110, .4320 & .4325.

8 - Import Classes 309.6615 & .7510.

9 - Export Classes 309.7400.

13 - Import Classes 309.0200, .0330-.0365, .0500, .0630-.0665, .2100, .2500, 310-.0109-.0114, .0149-.0170, .0209-.0214, .0249-.0270, .0530, .0550, .0630 & .0650.

16 - Import Classes 309.3030-.3065, .3130-.3165, .4338-.4355.

19 - Import Classes 309.6000, .6625-.7000, .7525-.7555.

20 - Export Classes 309.7620, .7630, .7640 & .7660.

23 - Import Classes 309.2800, .2900, .9800 & .9900 plus domestic shipments excluding Reinforced Plastics and Electrical Uses. See text page 200.

25 - U.S. Census Bureau Report M22P.

26 - U.S. Census Bureau Report M22D.

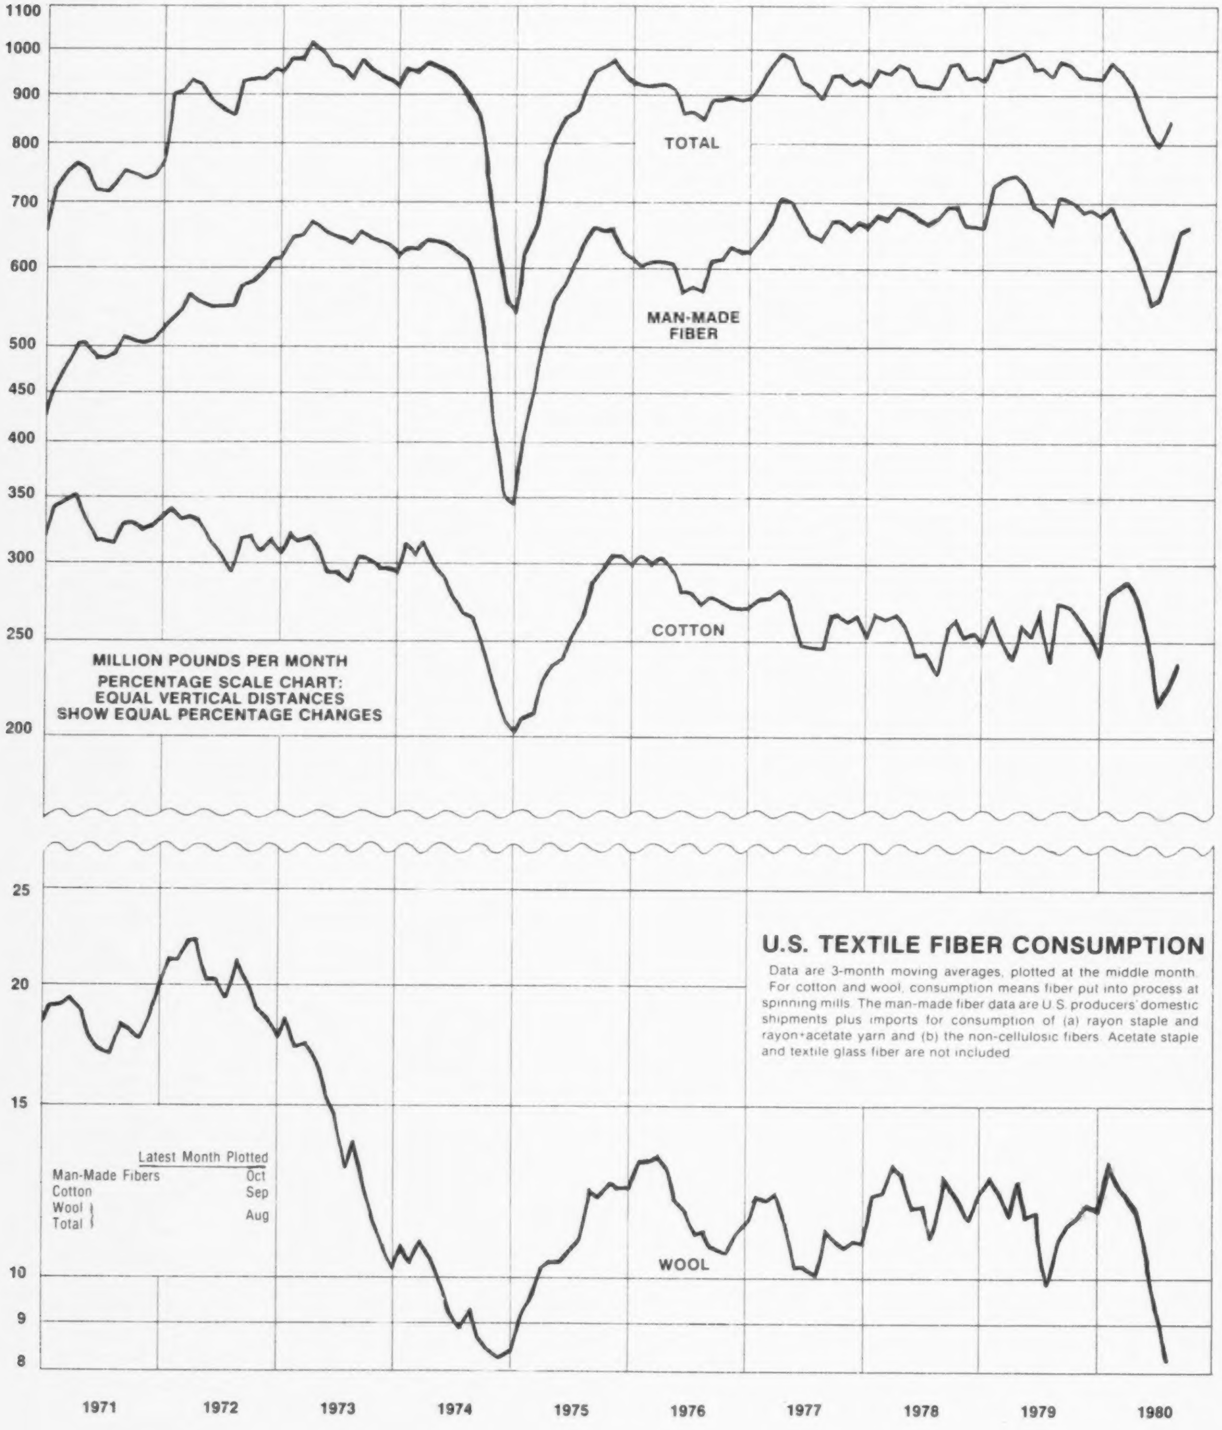
27 - Raw material imports of silk, linen, jute, sisal & other hard or leaf fibers (see page 171 of the November 1980 ORGANON issue). Also see text page 200.

28 - Raw material plus semimanufactured imports of silk, linen, jute, sisal & other hard or leaf fibers (see page 171 of the November 1980 ORGANON issue). Also see text page 200.

29, 30, 32, 33, 35 & 36 - "Cotton and Wool Situation" (U.S. Department of Agriculture).

CERTAIN TOTALS IN THE TABLES (obvious totals such as Columns 1+2=3, 4+5=6, etc., are described here).

10 - Columns7+8-9
21 - Columns 18+19-20
24 - Columns 11+22+23
31 - Columns 24+29-30
34 - Columns 25+32-33
37 - Columns 26+35-36



U.S. TEXTILE FIBER CONSUMPTION

Data are 3-month moving averages, plotted at the middle month. For cotton and wool, consumption means fiber put into process at spinning mills. The man-made fiber data are U.S. producers' domestic shipments plus imports for consumption of (a) rayon staple and rayon+acetate yarn and (b) the non-cellulosic fibers. Acetate staple and textile glass fiber are not included.

	Latest Month Plotted

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census.

The man-made, cotton and wool manufactures data are from "Cotton and Wool Situation," a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and non-cellulosic fibers only; textile glass fiber is excluded.

a. E means a net export balance; I is a net import balance.

b. Acetate tow is excluded.

c. The fibers included are shown as "Total Man-Made Fiber Above" on pages 189 and 190 of the November 1980 ORGANON.

d. Man-made fiber equivalent.

e. Raw cotton equivalent. Data are similar to those on page 29 of the March 1980 ORGANON.

f. Raw wool content. The data differ from those on page 29 of the March 1980 ORGANON to the extent that noils and waste are included here.

[1] Also includes 310.0510 & .0610.

[2] Also includes 310.0530, .0550, .0630 & .0650.

[3] Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

[4] There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

[5] Also includes 310.1110 & .1114.

[6] Also includes 310.2010 & .2110.

[7] Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

[8] Also includes 310.5005 & .5030.

[9] Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

[10] Chiefly roving. Also includes 309.9800 & .9900.

1. Year to date totals except for stock, which is the latest month's data.
2. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.
3. Producers' total domestic plus export shipments.
4. Rayon yarn data are available annually only; see page 13 of the February issue.
5. Data for nylon includes aramid.
6. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.
7. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.
8. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.
9. Saran and spandex data are not included in these totals. See page 13 of the February issue for annual data on these yarns.
10. Acetate staple+tow data are available annually only; see page 13 of the February issue.

ANNUAL BOUND ORGANON EDITION

A limited number of bound copies of the 1980 TEXTILE ORGANON, Volume LI, will be available at $50.00 each (postpaid). Remittance with the order please.

ANNUAL INDEX - VOLUME FIFTY-ONE

The names of U.S. producers of the man-made fibers, together with the products made, are listed on pages 142-146. The corresponding list of world producers is on pages 85-100. Individual producers' names are not shown in this index unless there have been new items concerning them during the year.

Monthly U.S. fiber shipments, stock, etc., are shown in the table "Selected U.S. Monthly Textile Fiber Data," which is usually found on the last page of each ORGANON issue. In the following index, this is called the "Monthly Table."

Each issue of the ORGANON contains one or more principal topics, e.g., the World Man-Made Fiber Survey in June. Following is a brief outline of major subjects covered in the 1980 issues. The numbers in parentheses are the pages of each month's issue.

JANUARY	Commodity Credit Corporation's Annual Report (1-8)
FEBRUARY	Annual Review of the U.S. Man-Made Fiber Producing Industry, incl. Production, Shipments, Stock, etc. Broad Woven Goods Production (9-24)
MARCH	U.S. Mill Consumption and Domestic Consumption of Textile Fibers. Imports, Exports & Balance (25-40)
APRIL	Annual U.S. Man-Made Fiber Import-Export Review (41-56)
MAY	Quarterly U.S. Man-Made Fiber Review. Broad Woven Goods Production (57-72)
JUNE	World Man-Made Fiber Survey. Directory of World Man-Made Fiber Producers. Also see pages 105-115. (73-104)
JULY	World Man-Made Fiber Data in Pounds. U.S. Hosiery Production (105-120)
AUGUST	Quarterly U.S. Man-Made Fiber Review. Broad Woven Goods Production (121-136)
SEPTEMBER	Directory of U.S. Man-Made Fiber Producers. First Half Man-Made Fiber Import-Export Review (137-152)
OCTOBER	World Cotton Review (153-168)
NOVEMBER	Textile Fiber End Use Survey. Quarterly U.S. Man-Made Fiber Review. Estimates of Apparel Market in U.S. (169-192)
DECEMBER	World Wool Review. Producing Capacity of the U.S. Man-Made Fiber Industry (193-206)

FEATURING MAN-MADE FIBERS

VOL. LII • NO. 1

JANUARY
1981

MONTHLY REVIEW

1980 U.S. SHIPMENTS OF NON-CELLULOSIC FIBERS (EXCEPT SARAN AND SPANDEX) WERE 5% BELOW THE PREVIOUS YEAR'S RECORD HIGH LEVELS. ONLY ACRYLIC+MODACRYLIC AND POLYESTER STAPLE+TOW+FIBERFILL EXCEEDED 1979 LEVELS.
PGS 1 & 16

THE COSTS OF U.S. GOVERNMENT-SUPPORTED TEXTILE FIBER & PRODUCT PROGRAMS ARE DETAILED.
PGS 11-13

POLYESTER STAPLE & NYLON CARPET YARN AT RECORD LEVELS

December shipments of polyester staple+tow and BCF nylon carpet yarn were at record levels, surpassing the previous highs set in October and September 1980, respectively. Polyester staple+tow shipments at 250.0 million pounds were 8% above the old record and nylon carpet yarn deliveries, at 76.5 million pounds, were 6% above the previous record high.

NON-CELLULOSIC SHIPMENTS UP 10% IN DECEMBER

December shipments of non-cellulosic fibers (except saran and spandex) were at a new record high level of 756.7 million pounds, 3% above the previous record of 735.2 million pounds delivered during October 1979 and 10% above the 690.0 million pounds shipped last month. However, shipments for the year 1980, at 7,990.4 million pounds were 5% below the record 1979 deliveries of 8,406.6 million pounds. Only acrylic+modacrylic and polyester staple+tow shipments in 1980 exceeded those of a year earlier.

Non-cellulosic yarn+monofilaments (except saran and spandex) deliveries totaled 352.9 million pounds, 6% above November shipments and the highest since March 1980. However, for the year, deliveries of 3,818.1 million pounds were 7% less than those of 1979.

Shipments of non-cellulosic staple+tow during December 1980 were at a new record high level of 403.8 million pounds, 13% above November and 6% above the previous high of 381.2 million pounds set during October 1980. However, 1980 shipments of 4,172.3 million pounds were 3% below the 4,306.7 million pounds shipped during 1979.

NOVEMBER AND DECEMBER SHIPMENTS COMPARED

Following is a comparison of total December shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with November (million pounds), and the percentage change, respectively: nylon industrial 38.1 & 40.2 & -5%; low denier industrial 3.0 & 2.8 & +7%; carpet 76.5 & 68.8 & +11%; textile 42.5 & 38.8 & +9½%; polyester industrial 28.5 & 25.1 & +14%; low denier industrial 2.0 & 2.5 & -20%; textile 104.6 & 97.3 & +7½%; olefin 57.7 & 57.2 & +1% and the total of these fibers 352.9 & 332.7 & +6%.

For non-cellulosic staple+tow+fiberfill, the corresponding data are: nylon 78.2 & 73.5 & +6½%; acrylic+modacrylic 65.1 & 59.4 & +9½%; polyester 250.0 & 213.2 & +17%; olefin+vinyon 10.5 & 11.2 & -6½% and the total 403.8 & 357.3 & +13%.

CELLULOSIC SHIPMENTS DOWN 7½% IN DECEMBER

December shipments of acetate filament yarn and rayon staple+tow totaled 54.8 million pounds, 7½% less than the 59.1 million pounds shipped during the previous month.

Shipments of acetate yarn last month totaled 21.4 million pounds, down 2% from the 21.8 million pounds delivered in November. For 1980, acetate yarn deliveries were 5½% less than 1979 shipments.

Rayon staple+tow shipments during December were 33.4 million pounds, 10% less than the 37.3 million pounds delivered during November. For the year 1980, rayon staple+tow shipments of 451.7 million pounds were 17% below the 542.5 million pounds shipped during 1979.

MONSANTO TO CEASE PRODUCTION OF POLYESTER FILAMENT YARN

Monsanto Company announced on January 14, 1981, that it will cease production of polyester filament yarn at its plants in Sand Mountain, AL, and Fayetteville, NC. Monsanto also announced that it had reached an agreement in principle to sell one of its two plants in Fayetteville to Fiber Industries, Inc., a subsidiary of Celanese Corporation.

Monsanto built the Sand Mountain facility in 1972 and acquired the Fayetteville plants from Rohm and Haas in 1977 for $50 million. In mid-1980, Monsanto announced it would mothball some 100 million pounds of its polyester filament yarn capacity. No exact date for the closures was given. Monsanto also disclosed that it would cease production of *Bidim* spunbonded polyester.

FIBER INDUSTRIES TO ACQUIRE ONE FAYETTEVILLE PLANT

Fiber Industries, Inc., a subsidiary of Celanese Corporation, has reached an agreement in principle with Monsanto Company to purchase one of Monsanto's two Fayetteville, NC, polyester filament yarn plants for $30 million.

In addition, Fiber Industries will also pay $8 million to insure continuation of research and development on Monsanto's in-line texturing technology for one year. Fiber Industries currently produces polyester filament yarn at Salisbury & Shelby, NC, and Darlington & Greenville, SC.

The Fayetteville plant, which was completed in 1976, has a capacity to produce 70 million pounds per year of polyester filament yarn. The net result of these two announcements will be to reduce the textile polyester filament yarn capacity from 1.6 billion pounds per year to 1.5 billion pounds per year when the equipment is dismantled.

THE 1981 U.S. FIBER OUTLOOK

In a departure from our usual procedure, we have distilled all the recent statements and speeches given by U.S. man-made fiber executives on the near-term fiber outlook and present it forthwith.

The recovery of the fiber industry, begun in the 4th quarter 1980, is expected to continue through 1981, setting the stage for a better 1982. The industry expects 1981 to show modest growth, with 1982 being fairly strong. The fiber industry executives see the industry in a slow but steady growth pattern over the next few years.

The biggest problem facing the industry is its escalating raw material and fuel costs. Fiber prices have not increased by the same magnitude as raw material and operating expenses. No supply problem is foreseen for the petrochemicals needed by the industry. However, the industry's inability to fully pass along these increased costs over the past years has resulted in a low rate of return on investments.

The ability (or lack of it) to pass along these energy and raw material costs will affect future investment plans. The executives point out that a better rate of return on investments is needed for new capacity to be built. A need for increased polyester capacity is foreseen within a few years. Polyester filament yarn is looked upon as a problem area - witness Monsanto's recent announcement to withdraw from this product.

The industry expects no new generic fiber to be introduced in the short term. However, it is expected that new variants of existing fibers will be introduced over the next few years. The focus of these new variants will be on improving the processability of man-made fibers and enhancing fiber values.

To recap, the biggest problem facing the domestic fiber industry is its inability to achieve a reasonable rate of return on investments. No shortage of petrochemical feedstocks is anticipated, though their prices are expected to continue to rise. Fiber variants with improved processability, rather than new generic types, are expected to be introduced.

Recently, R. E. Pennell, Director of International Business Intellegence, Monsanto Textiles Company and Dr. David K. Barnes, Vice President, Textile Fibers Department, E.I. du Pont de Nemours & Company gave presentations concerning the fiber outlook. R. E. Pennell took a global view of the situation, whereas Dr. Barnes concentrated on the domestic scene. Their speeches have been summarized and are presented opposite.

TWO SPEECH REVIEWS

"Current and Future Developments in International Trade & Marketing of Textile Products" presented by R. E. Pennell, of Monsanto Chemical Company at a conference sponsored by *Chemical Week* in Houston, TX. November 21, 1980.

In his speech, R. E. Pennell analyzes the current trends in fiber production and consumption and makes projections to 1990. He estimates that the current world fiber per capita consumption is some 15½ pounds per person. He breaks this down into four areas: the USA at some 56 pounds per person, West Europe at some 33 pounds per person, Japan at some 44 pounds per person and the rest of the world at 10 pounds per person.

During the period 1960-1980, fiber consumption grew by 35.3 billion pounds (see Table 1). One-third of this growth was due to world population increases, while the other two-thirds was due to per capita increases. Note that 65% of all growth came from the less developed world areas.

TABLE 1
FIBER CONSUMPTION GROWTH BY AREA
1960-1980
Billion Pounds

AREA	TOTAL GROWTH	GROWTH DUE TO: POPULATION INCREASE	GROWTH DUE TO: PER CAPITA INCREASE
United States	6.0	1.5	4.5
West Europe	4.3	0.9	3.4
Japan	2.2	0.9	1.3
Rest of World	22.8	8.3	14.5
TOTAL	**35.3**	**11.6**	**23.7**

For the period 1980-1990, Mr. Pennell estimates that world fiber consumption will grow at an annual rate of 2½% to 88 billion pounds. The developed nations are expected to consume 38% of the 1990 total and the less developed countries will consume 62%. Table 2 details the 1980-1990 growth in billion pounds by area.

Mr. Pennell estimates that in the 1970s total consumption grew at a compound rate of 3.3% per year. Within this overall average, non-cellulosic fibers grew at an 8.3% rate, natural fibers grew about 1.6% per year and cellulosic fibers declined slowly. The forecast for 1990 implies a continuing growth rate for natural fibers of 1.6%, no growth for cellulosic fibers, and a halving of the previous non-cellulosic growth rate of 4.2% per year.

TABLE 2
FIBER CONSUMPTION GROWTH BY AREA
1980-1990
Billion Pounds

AREA	TOTAL GROWTH	GROWTH DUE TO: POPULATION INCREASE	GROWTH DUE TO: PER CAPITA INCREASE
United States	2.0	1.1	0.9
West Europe	1.7	0.3	1.4
Japan	0.7	0.4	0.3
Rest of World	14.7	8.4	6.3
TOTAL	19.1	10.2	8.9

Table 3 shows current production and capacity of acrylic, nylon and polyester by area. Table 4 shows Monsanto's estimates of the 1990 production and capacity of these fibers. As can be seen from this table, almost two-thirds of the capacity growth is estimated to occur in the less developed countries.

TABLE 3
PRINCIPAL NON-CELLULOSIC FIBERS
(Acrylic/Nylon/Polyester)
1980
Billion Pounds

AREA	PRODUCTION	% CAPACITY	CAPACITY
United States	7.6	87	8.7
West Europe	5.2	70	7.4
Japan	2.9	94	3.1
Rest of World	7.4	79	9.4
TOTAL	23.1	81	28.6

TABLE 4

United States	9.8	92	10.7
West Europe	7.1	92	7.7
Japan	3.8	92	4.1
Rest of World	13.8	92	15.0
TOTAL	34.5	92	37.5

"The Fibers Outlook" presented by Dr. David K. Barnes of E. I. du Pont de Nemours & Company at a seminar sponsored by the American Apparel Manufacturers Association in New York. December 10, 1980.

The theme of Dr. Barnes' talk was that the textile economy is assuming increasingly global proportions. He summed up his message as "we must . . . become more competitive in world markets or be prepared to forego important business opportunities around the world -- ultimately, perhaps even some right here in our own country."

In assessing the current situation, Dr. Barnes said that 1980 fiber consumption was down 7% from 1979. He expected that fiber consumption would grow by 4% in 1981 and that 1982 would be a relatively strong year with growth of perhaps above 5%. However, over the period 1979 to 1982, the cumulative average annual growth would be 1%.

Through the 70s, total U.S. fiber consumption has grown at a 2.1% annual rate. This is projected to grow at a rate of 1.5% over the next five years. Dr. Barnes pointed out that over this period, non-cellulosic fiber consumption grew at a 7.5% rate, paced by penetration of markets formerly held by the natural fibers. He projected this segment to grow at a 3.3% rate over the next five years. He put this down to a slower overall growth of the market and the approaching limit to further displacement of natural fibers. Table 1 shows the growth by major market segments and Table 2 shows the growth by non-cellulosic fiber.

TABLE 1
GROWTH OF DOMESTIC CONSUMPTION BY MAJOR MARKET
(All Fibers)

	Annual Growth (%) 1970-79	Annual Growth (%) 1979-85
Home Furnishings	3.0	1.9
Industrial	1.6	1.5
Apparel	1.7	1.2
TOTAL	2.1	1.5

TABLE 2
GROWTH OF NON- CELLULOSIC FIBER CONSUMPTION
(Domestic Markets)

	Annual Growth (%) 1970-79	Annual Growth (%) 1979-85
Polyester	9.0	3.4
Nylon	7.6	2.8
Acrylic	2.7	2.7
Olefin	11.0	5.3
TOTAL	7.5	3.3

Citing Du Pont's experiences since the oil crisis first began in 1973, Dr. Barnes noted that Du Pont's fiber costs have risen almost threefold, while its fiber price index has increased only 45%. Thus, price increases have covered only 72% of raw material cost increases over this period. Dr. Barnes expects this cost escalation to continue. For internal planning purposes, he said, Du Pont was projecting crude oil prices to reach $73 a barrel by 1985. This inability to pass along raw material price increases poses problems for future investment plans.

Dr. Barnes pointed out that the decision to add new capacity must precede start-up by about three to four years. However, fiber prices must first reach a level which provides an adequate return to support reinvestment in new capacity. To duplicate the Cooper River plant, Du Pont's newest and largest polyester plant, in the mid-1980s would cost double the original mid-1970s investment. A return of 15% would be the minimum Du Pont requires to invest in such a plant in this decade.

BOOK REVIEW

MAN-MADE FIBERS FACT BOOK UPDATES

Man-Made Fiber Producers Association, Inc., 1150 Seventeenth St., NW, Washington, DC 20036. $1.00 Updates only; $1.50 Fact Book & Updates.

The Man-Made Fiber Producers Association has recently released three updates for its Fact Book, the latest of which was released in 1978. These updates cover the statistical, trademark and education sections of the Fact Book.

The statistical update provides information on plant investment, payroll, R & D expenditures, employment and fiber sales data through 1979. Data on production and consumption are also provided as is a listing of MMFPA member companies along with their plant & product listings and foreign subsidiaries.

The trademark and education sections update the MMFPA fiber trademarks and educational literature available.

BROAD WOVEN FABRIC PRODUCTION

Cotton broad woven fabric production during the first six months of 1980 showed an increase of 31.3 million linear yards, or 1½%, to 2,081.9 million linear yards from the 2,050.6 million linear yards produced in the first six months of 1979. The increase in corduroy production, up 19%, to 166.8 million linear yards during the first six months of 1980 from 140.7 million linear yards during the 1979 period and carded colored yarn fabrics and all other fabrics, up 30%, offset losses in all other fabric categories. During the first six months of 1980, as compared with the corresponding 1979 period, duck fabrics production declined 13% to 42.2 million linear yards, sheeting fabrics declined 11% to 338.1 million linear yards, print cloth fabrics declined 3½% to 740.8 million linear yards and toweling declined 2½% to 255.0 million linear yards.

Production of woolen & worsted fabrics in the first half of 1980 increased 6½%, or by 4.3 million linear yards, to 69.1 million linear yards from the 64.8 million linear yards produced during the January-June 1979 period. Men's and boys' clothing was the only category to show an increase in production from the first half of 1979 to the first half of 1980. Production increased 34% from 28.4 million linear yards in the first six months of 1979 to 38.0 million linear yards during the corresponding 1980 period. This more than offset the declines in women's and children's clothing, down 10% to 24.9 million linear yards, and nonapparel fabrics, down 29% to 6.2 million linear yards.

Production of man-made fiber broad woven goods totaled 3,457.2 million linear yards during the first six months of 1980, an increase of 61.7 million linear yards, or 2%, over the 3,395.5 million linear yards produced in the first half of 1979.

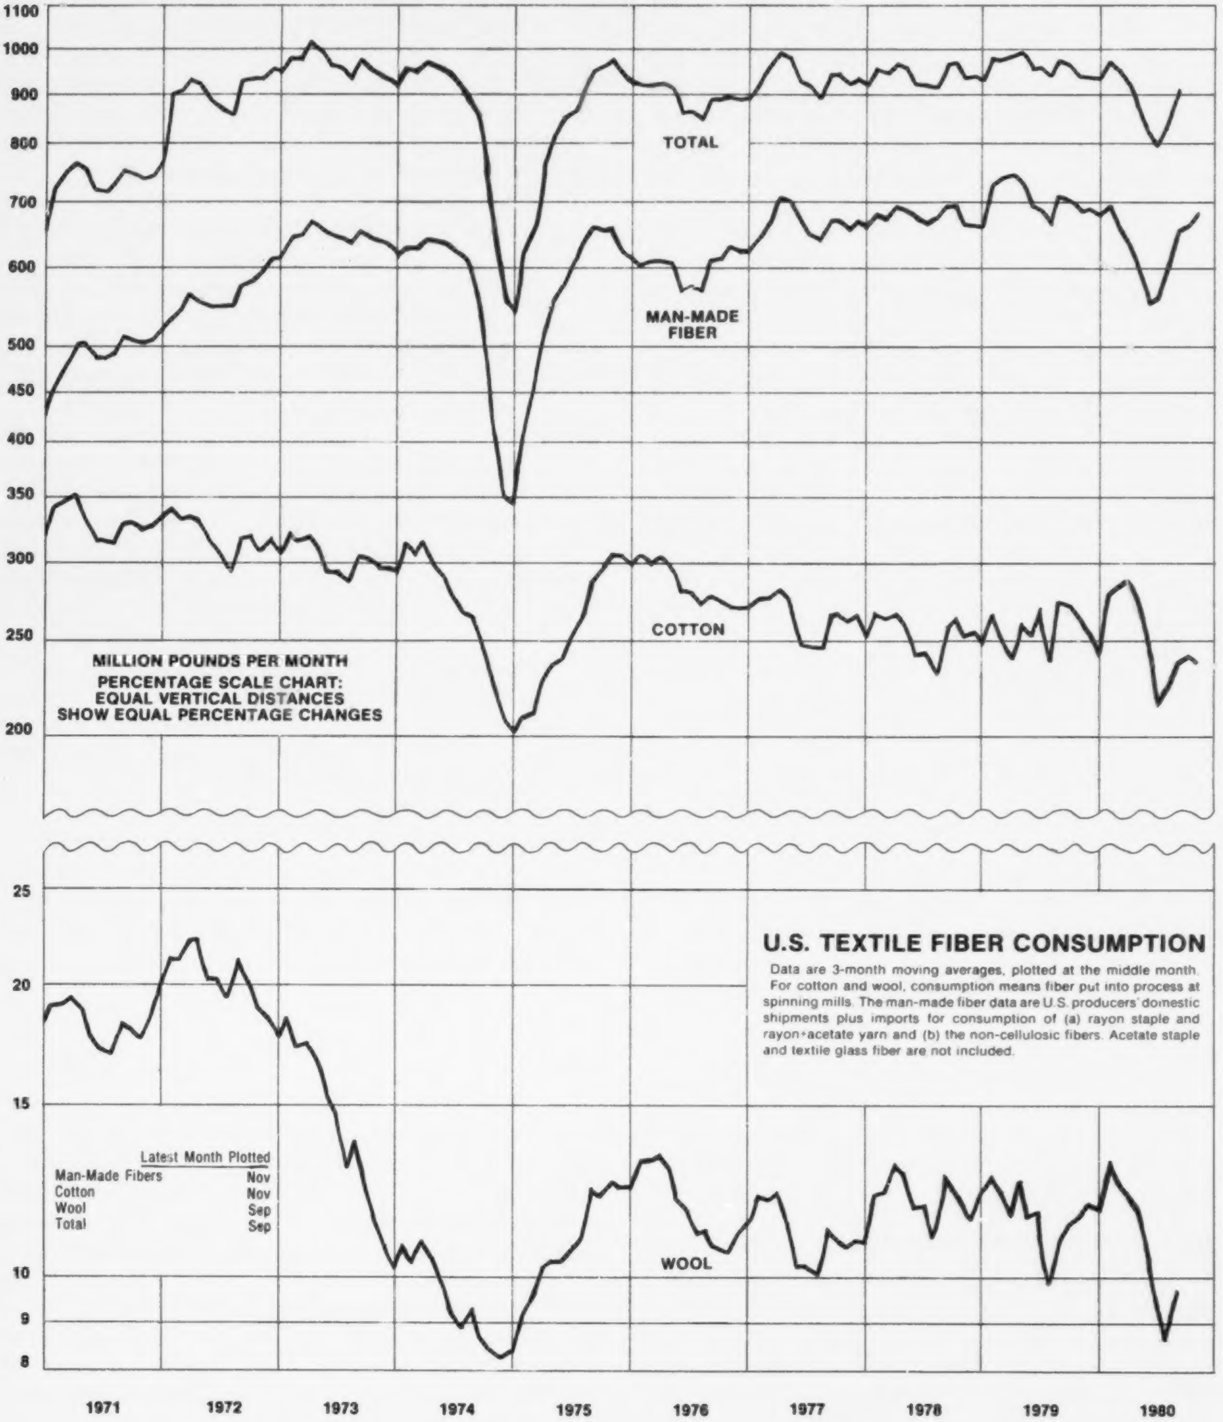
In general, production of 100% filament yarn fabrics, combination fabrics and drapery fabrics increased during the first six months of 1980 as compared with 1979, whereas spun yarn fabrics (except polyester/cotton blends), blanketing and upholstery & drapery fabrics declined.

U.S. COTTON CROP

The Crop Reporting Board of the U.S. Department of Agriculture reported that, as of January first, the 1980 (August 1980-July 1981) cotton crop was expected to total 11,124,500 bales of 480 pounds each, net weight. This is 1,687,800 bales less than the Board's original estimate of 12,812,300 bales as of August first. Thus, the 1980 crop is expected to be 3,504,800 bales, or 24% less than the 14,629,300 bales produced in the 1979 crop year.

The harvested acreage for the 1980 cotton crop is estimated at 12,988,900 acres by the Board, as of January first. This compares with a harvested acreage of 12,815,900 acres for the 1979 crop. The Crop Reporting Board estimates the yield for the 1980 cotton crop to be

(Continued on page 10)



U.S. TEXTILE FIBER CONSUMPTION

Data are 3-month moving averages, plotted at the middle month. For cotton and wool, consumption means fiber put into process at spinning mills. The man-made fiber data are U.S. producers' domestic shipments plus imports for consumption of (a) rayon staple and rayon+acetate yarn and (b) the non-cellulosic fibers. Acetate staple and textile glass fiber are not included.

[a] Felts are not included.

[b] Includes filament & spun yarn fabrics.

[c] Includes bedspread fabric (except glass).

[d] 100% or chiefly man-made fibers; chief fiber not specified. Also includes small poundages of silk, tie, twisted paper yarn and girdle & swimwear fabrics.

[e] Includes a nominal amount of cotton and some steel.

1981 COTTON CROP ACREAGE

The U.S. Department of Agriculture reported that, as of January first, 1981, domestic cotton growers are planning to plant 14,059,000 acres of upland cotton for the 1981 crop year (August 1981-July 1982). The intended 1981 crop plantings compare with a planted acreage of 14,485,300 for the 1980 cotton crop. The

a. Includes the quantity and value of each commodity as pledged for outstanding loans plus that held in price support inventory.

b. As of June 30th, end of old fiscal year. See text below.

c. Book value before the deduction of reserve for losses.

acreage actually planted to the 1980 cotton crop was 357,700 acres less than had been indicated by last year's April first *Intentions to Plant* report of 14,843,000. The planted acreage to American Pima cotton for the 1980 crop year was 73,000 acres.

CCC INVESTMENT & OPERATIONS

The table above shows the Commodity Credit Corporation's investment in raw cotton for each of eleven fiscal years. The data in the first seven columns are for fiscal years ending June 30th, while those in the last five columns are for fiscal years ending September 30th. 1976 (the year the fiscal year was changed) is shown both under the old fiscal year, for comparison with earlier years' data, and the current fiscal year.

The tables on pages 12 and 13 show the relevant costs of U.S. Government programs in support of price and/or consumption of American cotton and wool since the programs began in 1933. These programs are discussed in the October and December ORGANON issues.

The CCC has had no investment in wool since 1957, i.e., the wool price support monies shown in the page 12 table are paid directly to growers.

a. Old fiscal year ending June 30th (12 calendar months in 1976).

b. New fiscal year ending September 30th (15 calendar months in 1976).

c. Inventory Operations means sales less the cost of sales and less storage, handling & transportation expense.

d. Direct Payments means cash or in-kind price support payments to farmers.

e. Diversion Payments means payments to farmers for acreage diversions under the 1966-1968 Upland programs.

f. The Equalization Program, which began April 11, 1964, was mainly replaced by other programs as of August 1, 1966.

g. Data for 1953-1955 include cottonseed meal under the Emergency Feed Program.

h. Data through 1956 include price support programs only. For 1957 forward, incentive payments are also included in the year in which they became payable.

SOURCE: *CCC Report,* same as above.

a. Old fiscal year ending June 30th (12 calendar months in 1976).

b. New fiscal year ending September 30th (15 calendar months in 1976).

c. The Cotton Programs' data are from the table above.

d. Program began in 1954.

e. Program began in 1961.

f. Program began in 1954.

g. Partially estimated.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. non-cellulosic. Any separation between cellulosic and non-cellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 13 of the February issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 13 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 13 of the February issue.

Textile ORGANON

FEATURING MAN-MADE FIBERS

VOL. LII • NO. 2

FEBRUARY 1981

MONTHLY REVIEW

1980 U.S. MAN-MADE FIBER OUTPUT DECREASED 8% TO 9,566 MILLION POUNDS COMPARED TO 1979. CELLULOSIC FIBERS WERE DOWN 13%, NON-CELLULOSIC FIBERS DECREASED 6½% AND TEXTILE GLASS FIBER PRODUCTION WAS DOWN 15% PG 20

WORLD 1980 OUTPUT OF MAN-MADE FIBERS (EXCEPT ACETATE CIGARETTE TOW, OLEFIN & TEXTILE GLASS FIBER) WAS ESTIMATED AT 30,550 MILLION POUNDS, 1% BELOW 1979'S RECORD HIGH 30,851 MILLION POUNDS PG 17

PRELIMINARY ESTIMATE OF 1980 WORLD MAN-MADE FIBER PRODUCTION

The Textile Economics Bureau's preliminary estimate of world man-made fiber production (except acetate cigarette tow, olefin and textile glass fiber) put the 1980 total at 30,550 million pounds, 1% below the record 1979 output of 30,851 million pounds.

Non-cellulosic staple+tow was the only category to post a year-to-year increase in output, rising ½% to 12,650 million pounds in 1980 from 12,582 million pounds in 1979. As a whole, non-cellulosic fiber output declined 1% in 1980, to 23,130 million pounds from the 23,399 million pounds produced during 1979. Cellulosic fiber production declined ½% in 1980, to 7,420 million pounds, from the previous year's output of 7,452 million pounds.

The center table opposite shows the variations in the 1979-1980 growth rates of the various fibers in the United States as compared with the rest of the world.

WORLD PRODUCTION BY AREA

The lowest of the three tables on the front page of this issue shows world production of man-made fibers for 1977-1980 as divided by producing region and product. It is of interest to note that in the two largest fiber producing areas, the USA and West Europe, both cellulosic and non-cellulosic fiber production declined, whereas in all other areas fiber production increased except for a decline in cellulosic fiber production in the Other Africa, Asia & Oceania countries.

Following is a comparison of 1980 and 1979 fiber production (million pounds) by area and the percentage change, respectively: West Europe 6,760 & 7,077 & -4½%; East Europe 5,100 & 4,909 & +4%; USA 7,954 & 8,610 & -7½%; Other Americas 2,050 & 1,926 & +6½%; Japan 4,010 & 3,897 & +3%; Other Africa, Asia & Oceania 4,676 & 4,432 & +5½% and the World total 30,550 & 30,851 & -1%.

1980 MAN-MADE FIBER PRODUCTION DECLINES 8%

Last year, U.S. production of man-made fibers totaled 9,565.8 million pounds, 8% below the record 10,380.3 million pounds produced during 1979. Cellulosic production totaled 806.0 million pounds during 1980, down 13% from the 929.8 million pounds produced during the previous year. Non-cellulosic fiber production, at 7,892.5 million pounds, was 6½% below that produced during 1979 and textile glass fiber output declined 15% in 1980 to 867.3 million pounds.

The only fibers to show an increase in 1980 production over 1979 output were polyester staple+tow+fiberfill (up 2½%), acrylic+modacrylic staple+tow (up 2½%) and saran & spandex yarn+monofilaments (up 5½%). These fibers all achieved new record high production levels.

NON-CELLULOSIC OUTPUT DECLINED 6½% IN 1980

Production of non-cellulosic fibers declined 6½% last year, to 7,892.5 million pounds, from the record 8,436.6 million pounds produced in 1979. Last year's output of non-cellulosic yarn+monofilaments totaled 3,744.3 million pounds, a decline of 10% from the record 4,154.3 million pounds produced during 1979. Non-cellulosic staple+tow+fiberfill production during 1980 declined 3% to 4,148.2 million pounds from the record 4,282.3 million pounds produced in 1979.

COMPARISON OF 1980 AND 1979 PRODUCTION OF NON-CELLULOSIC FIBERS

Following is a by-fiber comparison of 1980 and 1979 production of non-cellulosic fibers and the percentage change thereof.

For yarn+monofilaments the respective data (in million pounds) are: nylon+aramid 1,631.1 & 1,781.6 & -8½%, polyester 1,462.0 & 1,715.6 & -15%, olefin 632.2 & 639.1 & -1%, saran & spandex 19.0 & 18.0 & +5½% and total non-cellulosic yarn+monofilaments 3,744.3 & 4,154.3 & -10%.

For staple+tow+fiberfill the corresponding data are: nylon+aramid 726.6 & 938.8 & -23%, acrylic+modacrylic 779.2 & 761.1 & +2½%, polyester 2,526.7 & 2,462.2 & +2½%, olefin+vinyon 115.7 & 120.2 & -3½% and total non-cellulosic staple+tow+fiberfill 4,148.2 & 4,282.3 & -3%.

1980 CELLULOSIC FIBER PRODUCTION DOWN 13%

In 1980, the United States produced 806.0 million pounds of cellulosic fibers, down 13% from the 929.8 million pounds produced in 1979 and the lowest since the 1975 output of 749.0 million pounds.

All categories of cellulosic fibers declined, except acetate staple+tow which remained unchanged at 7.0 million pounds. Rayon yarn+monofilaments production declined 17% in 1980 to 47.2 million pounds. Output of acetate yarn fell by 2½% last year to 308.5 million pounds and rayon staple+tow production during 1980 declined 19% to 443.3 million pounds.

DOMESTIC CONSUMPTION OF MAN-MADE FIBERS DECLINED 7% DURING 1980

Domestic consumption of man-made fibers, i.e., domestic shipments plus imports for consumption, totaled 8,676.9 million pounds in 1980. Thus 1980 domestic consumption declined 7% from the 1979 figure of 9,315.6 million pounds. All categories of man-made fibers, except saran & spandex yarn+monofilaments and acrylic+modacrylic staple+tow, registered declines.

Cellulosic yarn+monofilaments domestic consumption fell by 9% to 325.0 million pounds in 1980 and cellulosic staple+tow domestic consumption, at 408.0 million pounds, was 12% below 1979 levels. Domestic consumption of non-cellulosic yarn+monofilaments, at 3,551.6 million pounds, were 7% below last year's levels, while consumption of non-cellulosic staple+tow+fiberfill declined 6½%, to 3,517.9 million pounds, during 1980. Textile glass fiber consumption declined 5% to a 1980 total of 874.4 million pounds.

U.S. MAN-MADE FIBER EXPORTS INCREASED BY 6½% in 1980

According to the U.S. Census Bureau, exports of man-made fibers in 1980 totaled 1,362,715 thousand pounds, an increase of 6½% from the 1,281,242 thousand pounds exported during 1979.

Exports of cellulosic yarn+monofilaments decreased 13% in 1980 to 26,930 thousand pounds and those of cellulosic staple+tow declined 33% to 71,072 thousand pounds from the 106,507 thousand pounds exported during 1979. Exports of non-cellulosic yarn+monofilaments increased 22% to 355,323 thousand pounds in 1980 while exports of non-cellulosic staple+tow increased 11% to 732,473 thousand pounds for the year 1980.

QUARTERLY MAN-MADE FIBER DATA

The tables on pages 22 & 23 detail U.S. man-made fiber producers' production, domestic shipments, direct export shipments and stock of man-made fibers (except rayon and saran & spandex yarn+monofilaments and acetate staple+tow) on a quarterly basis for the most recent years.

The difference between the exports reported by the U.S. Census Bureau and those reported on pages 22 & 23 are due to exports other than those shipped directly by the fiber producer. For example, if the fiber producer sells filament yarn to a texturizer to be textured, it is reported as a domestic shipment. Then, after texturing, if the texturizer exports the textured yarn, the Census Bureau reports it as an export shipment. Thus, the exports reported by the U.S. Census Bureau consist of both direct exports from the fiber producer and indirect exports from throwsters, texturizers, etc.

SHIPMENTS BY TRADE OR END USE

The tables on pages 24 & 25 present details of domestic filament yarn and staple+tow shipments by primary trade or end use for recent periods.

A comparison of 1980 filament yarn domestic shipments with 1979 shows the biggest year-to-year declines were registered by the tire trades. Polyester yarn shipments fell by 29% to 161.0 million pounds and nylon yarn shipments fell by 23% to 220.3 million pounds. Polyester yarn shipments to the other circular

a. Rayon yarn includes industrial (high tenacity) yarn and textile (regular+intermediate tenacity) yarn+monofilaments. Beginning January 1965, the high tenacity rayon yarn of 900 denier & finer is tabulated with regular tenacity yarn.

b. Acetate includes diacetate and triacetate. The acetate staple+tow data do not include the poundages thereof produced for cigarette filtration purposes.

c. Nylon includes aramid.

d. Olefin includes polypropylene yarn+monofilaments+spunbonded+film fiber and polyethylene monofilaments+film fiber.

e. Ester means polyester.

f. Other yarn is chiefly saran and spandex in recent years.

g. Acrylic includes modacrylic.

h. Other staple+tow includes only olefin and vinyon for recent years.

Earlier years' data are on pages 8 & 9 of the January 1962 ORGANON Base Book issue and page 4 of the January-February 1971 issue.

Domestic consumption (CONS) means the sum of producers' domestic shipments and imports for consumption.

Imports for consumption (IMPORTS): yarn+monofil includes yarn singles, monofilaments & strips; staple+tow includes grouped filaments. Not included here are plied, spun, & handwork yarns; sewing thread; sliver, tops & roving and waste.

a-h. See these lettered footnotes on the opposite page.

Non-cellulosic data from 1940 are on page 5 of the January-February 1971 issue. Rayon+acetate data from 1911 are on page 9 of the January 1962 ORGANON Base Book.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" non-cellulosic yarns (chiefly saran & spandex) are available annually only; see pages 20 & 21 herewith for further details on these yarns.

b. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

c. Yarn imports include singles and plied.

d. Acetate staple+tow data are available annually only; see pages 20 & 21 herewith for further details.

e. These figures are composites of the nylon, acrylic+modacrylic and polyester staple imports, i.e., Commodity Numbers 309.4338, .4342 & .4345.

(Continued from page 19)

knit trades fell by 19% to 498.5 million pounds in 1980 from the 615.4 million pounds shipped in 1979. Even though there were strong fourth quarter shipments of nylon carpet face yarn, 1980 shipments declined 2½% from those of the year 1979. Shipments of olefin yarn for carpet face increased 5% to 89.5 million pounds.

a. Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.

b. Small poundages of polyester are included in All Other

c. Small poundages of olefin are included in All Other.

d. Small poundages of nylon and polyester are included in All Other.

e. Other Broad Woven except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e. industrial applications are in All Other.

f. Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.

g. Small poundages of olefin are included in All Other.

h. All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing.

i. These poundages are included in the total domestic area above.

(Continued from page 22)

Deliveries of polyester and olefin yarn to the other broad woven trades increased during 1980.

A similar comparison for domestic staple+tow shipments shows that deliveries of acrylic+modacrylic to the hosiery, sweater and craft yarn trades increased 15% to 275.7 million pounds in 1980. Shipments of both acrylic+modacrylic and polyester staple to the other knit trades increased during 1980. However, shipments of nylon staple for carpet face yarns fell by 24%

SOURCE: U.S. Census Bureau, *Current Industrial Report MQ-22T.*

[a] Includes data from all types of broad woven fabric mills, i.e., cotton, man-made, woolen & worsted and tire cord & fabric mills.

[b] Includes 100% spun rayon and acetate as well as rayon and/or acetate/cotton blends regardless of blend level.

[c] Regardless of blend level.

[d] All Other Yarns includes spun nylon, other blends, silk and paper.

a. Felts are not included.

b. Includes polyester blanketing.

c. Includes filament & spun yarn fabrics.

d. Polyester blanketing is included with polyester/wool blend fabrics above.

e. Includes bedspread fabric (except glass).

f. 100% or chiefly man-made fibers; chief fiber not specified. Also includes small poundages of silk, tie, twisted paper yarn and girdle & swimwear fabrics.

g. Includes a nominal amount of cotton and some steel.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. non-cellulosic. Any separation between cellulosic and non-cellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

SOURCE: U.S. Census Bureau Report.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of non-cellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

a. Year totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 herewith for annual data.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 herewith for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 herewith for annual data.

Textile ORGANON

FEATURING MAN-MADE FIBERS

VOL. LII • NO. 3

MARCH
1981

MONTHLY REVIEW

U.S. MILL CONSUMPTION OF THE PRINCIPAL TEXTILE FIBERS IN 1980 TOTALED 11,983 MILLION POUNDS, 663 MILLION POUNDS, OR 5% BELOW THE 1979 LEVEL. MAN-MADE FIBER AT 8,784 MILLION POUNDS WAS DOWN 660 MILLION POUNDS, OR 7%. COTTON DECREASED 2 MILLION POUNDS AND WOOL 1 MILLION POUNDS. PG 36

FIBER AVAILABILITY PER CAPITA IN THE U.S. DURING 1980 TOTALED 53.3 POUNDS, 5.4 POUNDS, OR 9% LESS THAN THE 58.7 POUNDS OF 1979. PG 43

ORGANON PRICES TO INCREASE ON JULY FIRST

Due to increased costs, we are forced to raise the price of a subscription to the TEXTILE ORGANON by 25% as of July 1, 1981. Mailing costs alone have increased 40% since the beginning of this year.

The new subscription rates will be $125.00 for domestic and $187.50 for foreign. The single copy price will be $10.00 if sent within the United States and $15.00 if sent outside the U.S.A., with the exception of the June and November issues which will be $12.50 for domestic and $18.75 for foreign.

NON-CELLULOSIC SHIPMENTS UP MARGINALLY IN FEBRUARY

Producers' shipments of non-cellulosic fibers (except saran and spandex) last month were 665.5 million pounds, slightly above the 664.1 million pounds shipped during January this year. Deliveries of non-cellulosic fiber (except saran and spandex) for the year to date were 1,329.6 million pounds, 5½% less than the 1,406.0 million pounds shipped during January-February 1980.

NON-CELLULOSIC YARN SHIPMENTS UNCHANGED IN FEBRUARY

February shipments of non-cellulosic yarn+monofilaments (except saran and spandex), at 314.4 million pounds, were virtually unchanged from the 314.7 million pounds delivered during January 1981. However, for the first two months of 1981, shipments of 629.1 million pounds were 6% less than the 670.8 million pounds delivered during the corresponding 1980 period.

NON-CELLULOSIC STAPLE SHIPMENTS INCREASE ½% IN FEBRUARY

Shipments of non-cellulosic staple+tow+fiberfill increased ½% last month, to 351.1 million pounds from the 349.4 million pounds shipped during the month of January 1981. However, January-February 1981 deliveries of 700.5 million pounds were 4½% below the 735.2 million pounds shipped in the corresponding 1980 period.

JANUARY AND FEBRUARY SHIPMENTS COMPARED

Following is a comparison of total February shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with January (million pounds), and the percentage change, respectively: nylon industrial 34.4 & 34.2 & +½%; low denier industrial 3.0 & 3.0 & unchanged; carpet 63.8 & 67.1 & -5%; textile 36.6 & 33.7 & +8½%; polyester industrial 24.7 & 25.9 & -4½%; low denier industrial 2.1 & 2.1 & unchanged; textile 96.0 & 94.8 & +1½%; olefin 53.8 & 53.9 & unchanged and the total of these fibers 314.4 & 314.7 &

unchanged.

Similarly, for non-cellulosic staple+tow+fiberfill, the corresponding data are: nylon 67.5 & 70.7 & -4½%; acrylic+modacrylic 62.2 & 59.3 & +5%; polyester 211.1 & 208.6 & +1%; olefin+vinyon 10.3 & 10.8 & -4½% and the total 351.1 & 349.4 & +½%.

CELLULOSIC SHIPMENTS DECLINE 8% IN FEBRUARY

February shipments of acetate filament yarn and rayon staple+tow totaled 56.9 million pounds, 8% less than the 61.8 million pounds delivered during January 1981. Deliveries for the first two months of 1981, at 118.7 million pounds, were 15% below the 139.1 million pounds shipped during the corresponding 1980 period.

Rayon staple+tow deliveries during February were 35.4 million pounds, 13% less than the 40.9 million pounds shipped during January. Year-to-date shipments of 76.3 million pounds were 9½% less than the 84.3 million pounds delivered during January-February 1980.

TEXTILE FIBER CONSUMPTION

Annual data on three principal aspects of U.S. fiber consumption from 1970 through 1980 (mill consumption, domestic consumption and per capita consumption) are presented herewith. Earlier data on these series back to 1920 were given on pages 26-27 of the January 1962 ORGANON issue and subsequent revisions for the years 1955-1964 are shown on page 22 of the March 1971 issue. Those for the years 1965-1969 are shown on page 28 of the March 1980 issue.

MILL CONSUMPTION - METHOD

The data of columns 1, 4, 12 and 15 presented in the page 36 table show U.S. fiber producers' domestic shipments of the specified man-made fibers. To each of these appropriate categories, there is added the corresponding man-made fiber imports of raw materials such as yarn, staple and tow, the import classes being detailed in the table footnote. The sum of the domestic shipments plus raw fiber imports gives the domestic mill consumption of these fibers shown in columns 3, 6, 14 and 17.

Imports of textile glass fiber are not shown separately in the page 36 table. Thus, column 23 represents mill consumption of textile glass fiber. For greater detail of domestic shipments and imports of textile glass fiber see page 22 of the February 1981 ORGANON issue.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census.

The man-made, cotton and wool manufactures data are from *Cotton and Wool Situation,* a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and non-cellulosic fibers only; textile glass fiber is excluded.

a. E means a net export balance; I is a net import balance.

b. Acetate tow is excluded.

c. The fibers included are shown as "Total Man-Made Fiber Above" on page 46 herewith.

d. Man-made fiber equivalent.

e. Raw cotton equivalent. Data are similar to those on page 37 herewith.

f. Raw wool content. The data differ from those on page 37 herewith to the extent that noils and waste are included here.

SOURCE: U.S. Department of Agriculture, *Cotton and Wool Situation.*

a. Includes sliver, tops, roving, plied (textured and other), thrown and spun yarn, sewing thread and handwork yarns. Yarn singles (textured and other) are not included here; rather they are included in Column 13 on page 36 above.

b. Includes broad & narrow woven fabrics and knit cloth, except that cotton narrow fabrics and wool knit fabrics are included in All Other.

c. Wool includes lace & lace articles, veils & veilings and nets & nettings.

d. The man-made fiber data are tire cord & tire cord fabric.

e. Includes carpets & rugs. Lace window curtains are in All Other.

f. Includes such products as lace & lace articles, lace window curtains, braids, tassels, polishing & dustcloths, etc. Wool includes knit fabric in the piece, but not lace & lace articles, which are in Wearing Apparel.

g. Includes broad & narrow woven fabrics and knit cloth. Cotton also includes table damask, tire cord & fabric. Cotton knit fabrics and narrow fabrics are included in All Other.

h. Includes carpets & rugs.

i. Includes such products as lace & lace articles, polishing & dustcloths, braids, tassels, etc. Cotton also includes knits and narrow fabric.

Note: In the case of blended or mixed fiber products, the poundages of each of the component fibers have been estimated and included in the proper category, e.g., in a polyester and cotton fabric, the polyester portion is tabulated with man-made fiber and the cotton portion with cotton. A waste factor has been included to bring the data to the equivalent raw fiber consumption; see text page 41.

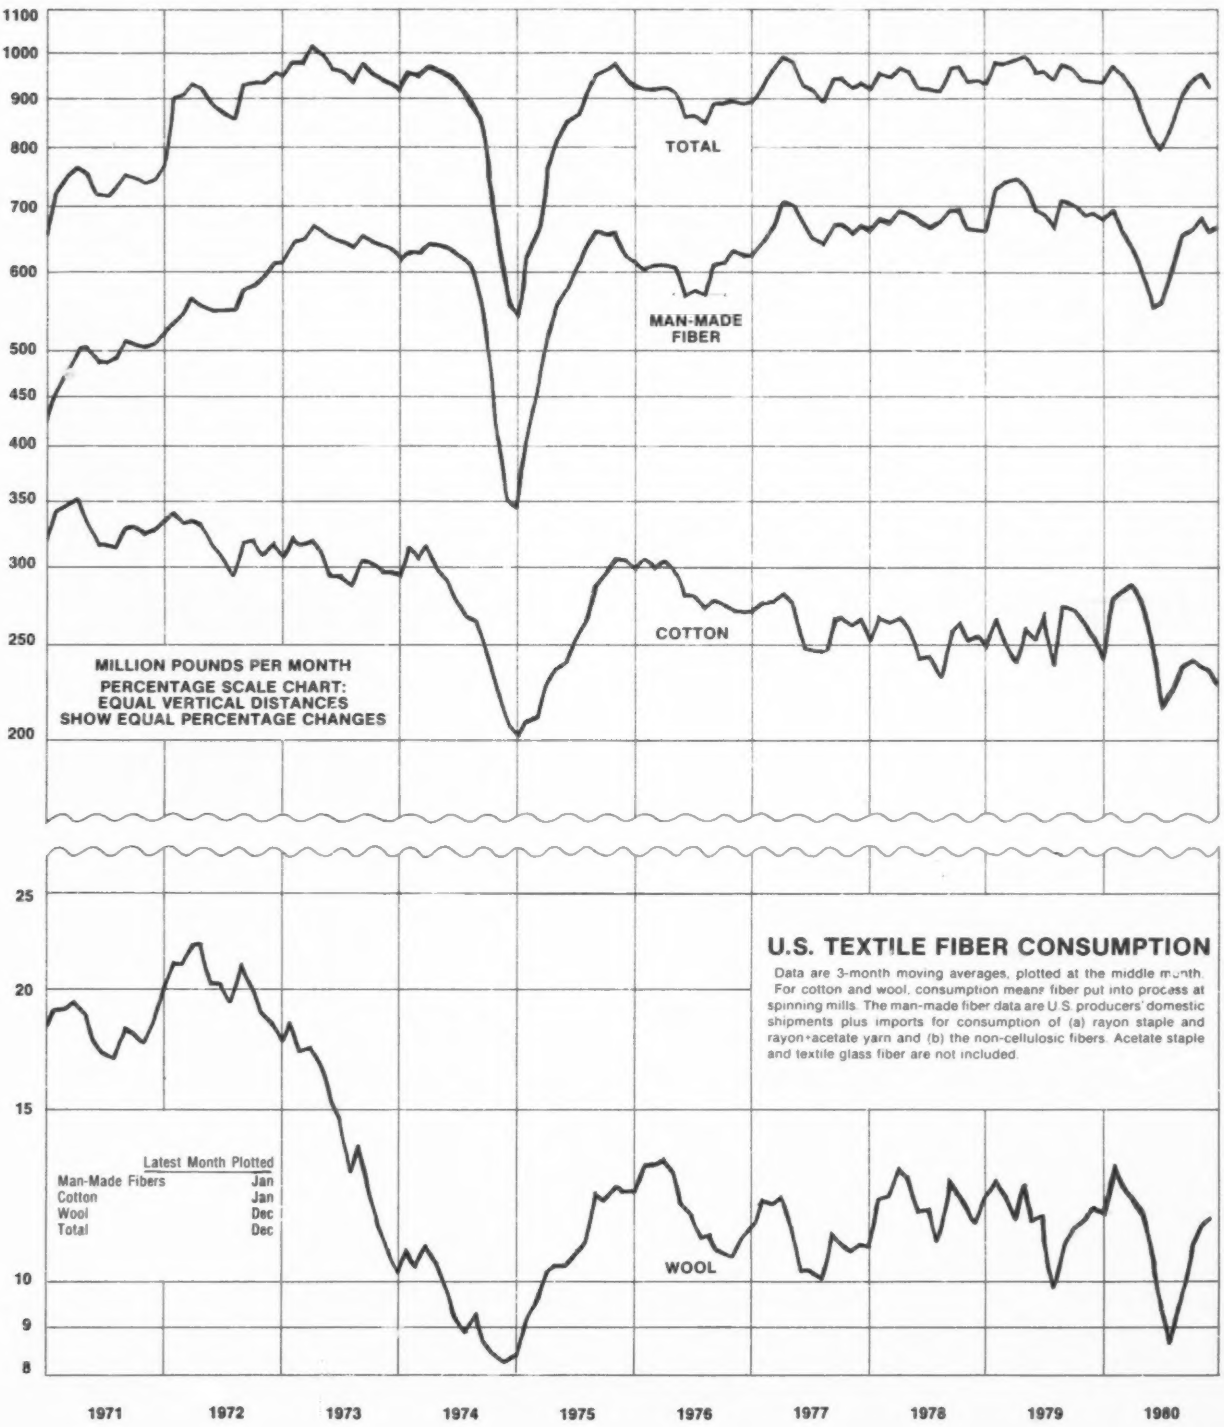
PERCENTAGE SCALE CHART



U.S. TEXTILE FIBER CONSUMPTION

Data are 3-month moving averages, plotted at the middle month. For cotton and wool, consumption means fiber put into process at spinning mills. The man-made fiber data are U.S. producers' domestic shipments plus imports for consumption of (a) rayon staple and rayon+acetate yarn and (b) the non-cellulosic fibers. Acetate staple and textile glass fiber are not included.

(Continued from page 34)

The yarn+monofilaments imports as shown in columns 2 and 13 on page 36 herewith comprise yarn singles, monofilaments and strips. Plied yarns are **not** included here because they are considered a semimanufactured product and thus are counted as part of **domestic** consumption rather than **mill** consumption.

Producers' waste shipments are handled differently in that columns 7 and 18 represent the producers' **total** shipments of waste fiber rather than **domestic** shipments. This is because the producer sends his waste to a waste processor who reclaims the waste and either ships it to a domestic customer or exports it. Thus, at the time a producer makes a waste shipment, he does not know its ultimate destination. Thus, the producers' total waste shipments are added to the imports of waste and the exports of waste are subtracted to give mill consumption of waste.

The sum of columns 11 (3+6+10), 22 (14+17+21) and 23 gives the total deliveries of man-made fiber to domestic mills, as presented in column 24. In this survey, these deliveries are considered as the equivalent of mill consumption or the fibers put into process by mills. Any change in mill holdings of unopened cases or bales is not taken into account.

The cotton data of column 25 agree with those presented in these series in the usual monthly ORGANON table, i.e., pages 48 herewith and 31 of the February 1981 issue. The December 1980 cotton consumption figure has been revised to 236.7 and for the year 1980 to 3,064.4 from the figures published in the February 1981 issue. Cotton is regarded as consumed when the bale is opened at the spinning mill. The data are based on Census Series M22P figures, adjusted to a calendar-month basis. Through 1970, the data are based on the relationship between the number of running bales and the equivalent 480-pound net weight bales. Beginning August 1972, the M22P reports show both bales and pounds.

The silk data of column 27 comprise imports for consumption of raw silk, as well as tussah, cocoons, noils & waste, i.e., reexports are not taken into account.

The scoured-basis wool data presented in column 26 consist of carpet class wool plus the following components of apparel class wool: the production of apparel wool tops combed or worsted combs; shorn & pulled wool of the sheep (domestic and foreign duty-paid) consumed in spinning other than carpet yarns on the woolen system; and other wool of the sheep (tops, noils, etc.) consumed for spinning into other than carpet & rug yarns on the woolen system. These data are the same as those presented in the monthly ORGANON table.

Not included here, nor in the monthly ORGANON data, are imported wool tops and yarns; wool consumed in spinning on systems other than the woolen & worsted, e.g., the cotton spinning system; reprocessed & reused wool; and animal hair other than the fleece of the sheep or lamb, i.e., hair of the Angora goat (mohair), cashmere goat, camel, alpaca, llama, vicuna, etc.

MILL CONSUMPTION DECLINED 5% IN 1980

Mill consumption of man-made fibers, cotton, wool and silk totaled 11,982.6 million pounds, a decline of 5% from the record 12,646.1 million pounds consumed by U.S. mills in 1979. The 1980 total comprised of 8,784.3 million pounds of man-made fibers, 3,064.4 million pounds of cotton and 133.9 million pounds of wool. Silk usage was less than 50,000 pounds. Thus, man-made fibers comprised 73.3% of fiber usage, cotton 25.6% and wool 1.1%.

MILL CONSUMPTION OF MAN-MADE FIBERS DECLINED 7% IN 1980

Consumption of man-made fibers in 1980 by domestic mills totaled 8,784.3 million pounds, 7% less than the record 9,443.8 million pounds consumed during 1979. Thus, in 1980, man-made fibers represented 73.3% of mill usage of fibers, down from 74.7% in 1979.

Mill consumption of cellulosic fibers in 1980 totaled 740.7 million pounds, 11% less than the 831.0 million pounds used by mills in 1979. This represented 6.2% of 1980 mill consumption as against 6.6% in 1979. The 740.7 million pounds of cellulosic fibers used by US mills was the least used since 769.9 million pounds were consumed in 1945.

In 1980, US mills consumed 7,169.2 million pounds of non-cellulosic fibers, 7% less than the record 7,690.2 million pounds used in 1979. This 1980 usage figure represented 59.8% of all fibers used as compared with 60.8% the previous year.

Textile glass fiber consumption in 1980 totaled 874.4 million pounds, 5% below the record 922.6 million pounds consumed in 1979.

MILL CONSUMPTION BY FIBER

The table at the top of page 41 details US mill consumption (billion pounds) by generic fiber type for the 11-year period 1970-1980. A comparision of 1980 with 1979 shows that the level of usage remained unchanged for all fibers except nylon and polyester.

MILL CONSUMPTION BY FIBER

BILLION POUNDS

YEAR	RAYON	ACETATE[a]	NYLON[b]	ESTER[c]	ACRYLIC[d]	OLEFIN	GLASS	COTTON	WOOL	TOTAL
1970	0.9	0.5	1.3	1.6	0.5	0.2	0.4	3.8	0.3	9.5
1971	1.0	0.5	1.7	2.0	0.5	0.3	0.5	4.0	0.2	10.7
1972	1.0	0.4	2.1	2.5	0.6	0.4	0.6	3.9	0.2	11.7
1973	1.0	0.4	2.3	3.1	0.7	0.5	0.7	3.6	0.2	12.5
1974	0.8	0.3	2.0	2.9	0.6	0.5	0.6	3.3	0.1	11.1
1975	0.5	0.3	2.0	3.1	0.5	0.5	0.5	3.1	0.1	10.6
1976	0.6	0.3	2.1	3.3	0.6	0.5	0.7	3.4	0.1	11.6
1977	0.6	0.3	2.3	3.6	0.7	0.6	0.8	3.2	0.1	12.2
1978	0.6	0.3	2.5	3.7	0.6	0.7	0.9	3.0	0.1	12.4
1979	0.5	0.3	2.7	3.8	0.6	0.7	0.9	3.1	0.1	12.7
1980	0.5	0.3	2.3	3.5	0.6	0.7	0.9	3.1	0.1	12.0

a. Acetate includes triacetate. Cigarette tow is excluded.
b. Nylon includes aramid.
c. Ester means polyester.
d. Acrylic includes modacrylic.

Nylon usage declined 15% to 2.3 billion pounds and polyester usage declined 8% to 3.5 billion pounds.

Polyester surpassed cotton as the most widely used textile fiber in 1977 after equaling cotton usage in 1975. In 1980, polyester was the most widely used fiber, followed by cotton and nylon. These three fibers alone represent some 74% of mill usage of all fibers.

DOMESTIC CONSUMPTION - METHOD

The domestic consumption of cotton, wool and the man-made fibers is calculated by adjusting mill consumption for the net imports or exports of semimanufactured goods (yarn, thread, cloth, etc.) and manufactured goods (wearing apparel, carpets, draperies, etc.). The import-export trade data for such items as tire cord, plied yarns, spun yarns and such are already available in pounds. But with products such as shirts, sweaters, hosiery, certain piece goods, etc., the import and export data of which are reported in yards, dozens, etc., appropriate conversion factors must be applied to obtain the poundage equivalents.

The U.S. Department of Agriculture makes studies of these import and export conversion factors and, based on special surveys made in conjunction with the Census Bureau, has calculated the import and export poundage series shown in the Domestic Consumption section of the page 36 table.

For these import and export data calculations, the Department has added certain waste factors to the derived poundages, so as to bring them to the same raw fiber basis used in the mill consumption section.

Details of the raw fiber equivalent of the imports and exports of man-made fiber, cotton and wool semimanufactures and manufactures are presented in the table on page 37 as annual averages for the 5 years 1970-1974 and 1975-1979, as well as for the single years 1975 through 1980.

Details of imports and exports of raw fiber, semimanufactures and manufactures of man-made fiber on a quarterly basis are also shown on page 35 herewith.

Note that the domestic consumption of man-made fibers is overstated to the extent that exports of throwster-textured yarn are included. When a shipment of feed yarn is made to a throwster, it is recorded as a domestic shipment and included in mill consumption. However, textured yarn exports are considered fiber exports rather than semimanufactured exports by the U.S.D.A. Census data do not distinguish between producer-textured yarn exports (not included in mill consumption) and throwster-textured yarn exports. Thus domestic consumption is overstated by this difference (total textured yarn exports less producer-textured yarn exports).

DOMESTIC CONSUMPTION OF FIBERS DECLINED 6½% IN 1980

The lower right-hand section of the page 36 table shows that domestic consumption of cotton, wool and man-made fibers in 1980 totaled 12,100.8 million pounds. The 1980 total was 6½% less than the 12,907.7 million pounds consumed in 1979. The 1980 total consisted of mill consumption (silk excluded) at 11,982.6 million pounds (down 662.0 million pounds) plus imports of 1,436.6 million pounds of semimanufactured and manufactured textile products (up 84.9 million pounds) less record exports of 1,318.4 million pounds of these products (up 229.8 million pounds). Thus, the 1980 net import balance for these semimanufactured and manufactured textile products amounted to 118.2 million pounds, the lowest import balance since 1964.

Domestic consumption of man-made fibers in 1980 declined 8½%, to 8,553.4 million pounds from 9,372.2 million pounds in 1979. Man-made fibers had an export balance of 230.9 million pounds for semimanufactured and manufactured products in 1980 as compared with an export balance of 71.6 million pounds the previous year.

Domestic consumption of cotton increased by ½% in 1980, to 3,352.2 million pounds as the import balance of semimanufactured and manufactured textile products increased by 19.7 million pounds (offsetting the 2.0 million pound decline in mill consumption) to 287.8 million pounds. Domestic consumption of wool declined 3% in 1980 to 195.2 million pounds.

DOMESTIC CONSUMPTION EXAMINED

The small text table below shows the 3-fiber (cotton+wool+man-made) mill consumption, the imports and exports of semimanufactured and manufactured products and their export balance (-) or import balance(+) amd the net domestic consumption for selected years, as drawn from the page 36 table.

MILLION POUNDS	1975	1976	1977	1978	1979	1980
MILL CONSUMPTION	10,617	11,587	12,191	12,410	12,645	11,983
IMPORTS	950	1,255	1,286	1,580	1,352	1,436
EXPORTS	695	779	748	809	1,089	1,318
IMPORT BALANCE	+255	+476	+538	+771	+263	+118
DOMESTIC CONS.	10,872	12,063	12,729	13,181	12,908	12,101

The table below shows the percentages of domestic consumption (at 100%) accounted for by mill consumption and by the imports, exports and net import of semimanufactured and manufactured goods for selected years. It will be noted that in 1980 man-made fibers again showed an export balance.

PERCENT		MILL CONS	IMP	EXP	NET IMP	DOM CONS
MAN-MADE FIBER	1975	99	+5	-4	+1	100
	1976	98	+6	-4	+2	100

	1977	96	+10	-6	+4	100
	1978	94	+12	-6	+6	100
	1979	98	+10	-8	+2	100
	1980	99	+12	-11	+1	100

LOWEST IMPORT-EXPORT BALANCE SINCE 1964

The U.S. import balance of semimanufactures and manufactures for 1980, at 118.2 million pounds, was the lowest import balance in recent years. In fact, one has to go back to 1964, when the import balance was 76.4 million pounds, to find a lower import balance.

Last year's imports of semimanufactured and manufactured textile products, at 1,436.6 million pounds, were 84.9 million pounds, or 6½%, above the 1,351.7 million pounds imported during 1979. Exports of these products during 1980 were a record 1,318.4 million pounds, 21% above 1979 exports.

RECORD MAN-MADE FIBER EXPORT BALANCE

In 1980, imports of man-made fiber semimanufactures and manufactures were 540.6 million pounds, 3% above the 525.0 million pounds brought in the year before. Exports of these products, at 771.5 million pounds, were at a new record high level, 29% above the corresponding 1979 figure. Thus, for the second year in a row there was an **export balance.** For 1980, this export balance amounted to a record 230.9 million pounds, 222% above the 1979 export balance.

The imports and exports of man-made fiber yarn (except textile glass fiber), staple and waste are detailed in the upper section of the page 35 table.

In the case of cotton, 1980 imports of all types of semimanufactured and manufactured textile products were at a level of 810.9 million pounds. 1980 imports were 8½% above the 746.1 million pounds imported during 1979. Exports of cotton manufactures and semimanufactures increased 45.1 million pounds, or by 9½%, in 1980 to a record 523.1 million pounds from the 478.0 million pounds exported in 1979. However, the 1980 import balance of these cotton products increased 19.7 million pounds from the 1979 level of 268.1 million pounds to 287.8 million pounds.

Last year's imports of semimanufactured and manufactured wool products increased by 4.5 million pounds and exports increased by 9.8 million pounds, thereby yielding an import balance of 61.3 million pounds for 1980.

UTILITY POUNDAGE

The greater use of man-made fibers, with their high utility value per pound as compared with cotton and wool, has had the effect of reducing the overall per capita poundage series. Put another way, if all the products currently made of man-made fibers were produced from cotton or wool, larger poundages of fiber would be required.

Utility poundage takes into account (1) differences in processing losses between the various fibers, (2) differences in fabric weights or "covering power," (3) variations in the useful life of products made from individual fibers or blends thereof and (4) consumers' premature discarding of textile products because of appearance and/or style obsolescence.

FIBER AVAILABILITY PER CAPITA

The chart on page 45 and the table below show the availability per capita of man-made, cotton and wool fibers in the United States. The 1980 total of 53.3 pounds was 9% below the previous year's 58.7 pounds.

Availability of man-made fiber decreased to a level of 37.7 pounds per capita in 1980, or 5.0 pounds below the 42.7 pounds the year before. Cotton decreased by 0.3 pounds and wool by 0.1 pound.

The per capita series is obtained by dividing domestic consumption by the resident population each year.

AVERAGE ANNUAL FIBER AVAILABLE FOR CONSUMPTION - POUNDS

PERIOD[a]	POPULATION	PER CAPITA				PER CONSUMING UNIT TOTAL[b]
		MAN-MADE FIBER	COTTON	WOOL	TOTAL	
	(41)	(42)	(43)	(44)	(45)	(46)
1920-1924	110.2	0.2	23.8	4.0	28.0	34.2
1925-1929	118.9	0.7	26.0	3.6	30.3	36.8
1930-1934	124.9	1.4	20.5	2.6	24.5	29.5

1974	211.4	36.3	16.2	0.7	53.2	64.1
1975	213.1	35.2	15.1	0.7	51.0	61.4
1976	214.7	38.1	17.2	0.9	56.2	67.4
1977	216.4	41.8	16.0	1.0	58.8	70.4
1978	218.2	43.2	16.2	1.0	60.4	72.1
1979	220.1	42.7	15.1	0.9	58.7	70.0
1980	227.1	37.7	14.8	0.8	53.3	66.3

a. Five-year averages for 1920-1979 and annual data for 1965-1980.

b. For meaning of "per consuming unit", see text opposite.

Column 41. U.S. population as of July first; 1950 forward data include Alaska and Hawaii. Puerto Rico is excluded.

Columns 42 to 45. Columns 31, 34, 37 and 40 respectively on page 36 herewith divided by column 41.

PER CAPITA AVAILABILITY OF APPAREL

The table below, from the February issue of the ORGANON, shows domestic shipments of man-made fibers by their major end use area; i.e., apparel, home furnishings and industrial.

	1976	1977	1978	1979	1980
Apparel	2959	3186	3165	3153	3193
Home Furnishings	2362	2693	2887	3034	2688
Industrial	1543	1645	1814	2038	1775
	6864	7524	7866	8225	7656

As can be seen from this table, shipments of man-made fibers to the apparel area increased in 1980, whereas shipments to the home furnishings and industrial areas declined. These declines were mainly attributable to drops in carpet & rug and tire & tire cord fabric shipments.

It is believed that similar trends held true for cotton and wool shipments. The table below details TEB estimates of the domestic apparel market (domestic production plus imports less exports) for 1979 and 1980.

ESTIMATED DOMESTIC APPAREL MARKET

MILLION POUNDS

	1979	1980
Domestic Production	5,005	5,060
Imports	825	885
Exports	158	323
Domestic Market	5,672	5,622
Per Capita (pounds)	25.8	24.8

It should also be noted that the 1980 population figures are based on the April first, 1980, Census count. It is possible that earlier years' population figures may be revised at a later date.

CONSUMPTION PER CONSUMING UNIT

Another concept of fiber consumption is the per-consuming-unit approach. This method arbitrarily assumes that the per capita use of fiber by the population of ages up to 17 years and of 65 years and older, is one-half that of the consuming-unit population of ages 17 to 64 years. Per-consuming-unit data are presented in the table opposite.

Notable changes in the population mix, especially since World War II, have tended to affect the growth in straight per capita fiber consumption which might otherwise have been expected. Thus, it will be seen that the difference between the per-consuming-unit and the per capita series increased from an average of 6.4 pounds per year during the 1920-1929 period to 8.9 pounds over the decade 1950-1959, 10.9 pounds average during 1960-1969 and to 11.7 pounds average in the ten years 1970-1979. In 1980 this difference was 13.0 pounds, up from 11.3 pounds in 1979.

MAN-MADE FIBER PRODUCERS' HANDBOOK SERVICE

The Textile Economics Bureau, Inc., is offering its Man-Made Fiber Producers' Handbook service to subscribers for an annual fee of $1,000 ($1,250 as of July first), payable in four quarterly installments.

The service consists of loose-leaf pages of U.S. man-made fiber data collected directly from U.S. producers. These data serve as the base from which the U.S. man-made fiber data published in the ORGANON are derived.

The pages are 8½" x 11", three-hole punched and ready for insertion in a binder, which is provided. The pages are updated monthly, quarterly, semiannually and/or annually.

Monthly data are issued about the 20th of each month, covering production, domestic shipments, exports and ending stock for acetate yarn, rayon staple and the major non-cellulosic fibers (acrylic, nylon, olefin and polyester). Nylon yarn shipments are broken down between industrial, carpet and textile types, and textile types are further divided as feed or producer-textured. Polyester yarn shipments are divided between industrial and textile types, with the latter further divided into seven denier classes and also between feed and producer-textured. Deliveries of acrylic+modacrylic, nylon and polyester staple+tow are divided between carpet and other types as well as by denier classes.

Quarterly data are issued from six to eight weeks following the end of each quarter for acetate yarn, rayon staple, the major non-cellulosic fibers and textile glass fiber. These data also cover production, shipments and stock, with shipments divided into the primary and secondary trades or end uses within the broad areas of apparel, home furnishings and industrial uses. The three sectors are also divided between woven, knit and other. Waste shipments are also handled on a quarterly basis.

Current and projected producing capacity for all types of man-made fibers are covered semiannually.

The annual pages summarize the aforementioned monthly and quarterly series, while also including data on rayon yarn, acetate staple and the smaller volume non-cellulosic fibers, such as saran, spandex and vinyon. The annual pages on secondary trade or end use go into considerably more detail than the quarterlies and include a page on shipments of man-made fiber waste by end use.

The service fee of $1,000 includes the new Handbook and the latest bound Base Book 1971-1975. Limited quantities of earlier Base Books are available for an additional fee.

For further information on the service, write or telephone Textile Economics Bureau, Inc., 489 Fifth Avenue, New York, NY 10017 (212) 661-5166.

RAW COTTON AND SILK DELIVERIES

The two tables on the lower half of page 45 detail monthly shipments of raw cotton and silk (in bales) for recent years. The monthly shipments of cotton (in bales) are not adjusted to the calendar month as are the monthly shipments in pounds. See page 40 herewith.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. non-cellulosic. Any separation between cellulosic and non-cellulosic is estimated, based mainly on average declared value.

[a] Also includes 310.0510 & .0610.

[b] Also includes 310.0530, .0550, .0630 & .0650.

[c] Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

[d] There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

[e] Also includes 310.1110 & .1114.

[f] Also includes 310.2010 & .2110.

[g] Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

[h] Also includes 310.5005 & .5030.

[i] Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

[j] Chiefly roving. Also includes 309.9800 & .9900.

a. Year totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February 1981 issue for annual data.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February 1981 issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February 1981 issue for annual data.

FEATURING MAN-MADE FIBERS

VOL. LII • NO. 4

APRIL
1981

MONTHLY REVIEW

U.S. EXPORTS OF MAN-MADE FIBERS & MANUFACTURES (EXCEPT TEXTILE GLASS) LAST YEAR TOTALED A RECORD HIGH 2,079,313,000 POUNDS, 14% MORE THAN THE 1979 LEVEL OF 1,830,331,000 POUNDS.

IMPORTS TOTALED 636,319,000 POUNDS. THE RESULTING 1980 ***EXPORT BALANCE*** OF 1,442,994,000 POUNDS WAS THE HIGHEST IN HISTORY. PG 58

IMPORT DATA BY COUNTRY OF ORIGIN AND EXPORT DATA BY COUNTRY OF DESTINATION ARE PRESENTED. PGS 54&56

March deliveries of non-cellulosic fiber (except saran and spandex) totaled 692.6 million pounds, 4% above the previous month's 665.1 million. January-March 1981 shipments of 2,021.7 million pounds were 3% less than the 2,089.0 million pounds shipped during the corresponding 1980 period.

Last month's deliveries of non-cellulosic yarn+monofilaments (except saran and spandex) were at a level of 341.2 million pounds, 8½% more than the 314.0 million pounds shipped in February and the highest since December of last year. January-March shipments of 969.8 million pounds this year were 4½ below those of the corresponding 1980 period.

March deliveries of non-cellulosic staple+tow+fiberfill totaled 351.4 million pounds compared with February shipments of 351.1 million pounds. Deliveries of all non-cellulosic staple+tow+fiberfill totaled 1,051.9 million pounds during the first quarter of this year or 2% less than the corresponding 1980 deliveries.

March shipments of non-cellulosic yarn+monofilaments exceeded production by 23.6 million pounds. Thus producers' stocks decreased by the same amount to 291.7 million pounds on March 31st. Last month's output of non-cellulosic staple+tow+fiberfill exceeded shipments by 5.2 million pounds. Thus producers' stocks rose by the same amount to 318.1 million pounds as of the end of the month.

Shipments of acetate yarn totaled 21.5 million pounds in March, virtually unchanged from February. January-March deliveries of 64.0 million pounds this year were 21% less than those of the corresponding 1980 period.

Last month's output of acetate yarn exceeded shipments by 0.4 million pounds. Thus producers' stock increased by the same amount to 15.8 million pounds on March 31st.

Deliveries of rayon staple+tow in March totaled 37.9 million pounds, 7% more than the 35.4 million pounds shipped during February but 14% below March 1980 shipments. January-March shipments of 114.2 million pounds were 11% below those of the same 1980 period.

Last month's output of rayon staple+tow exceeded shipments by 4.2 million pounds. Thus producers' stock increased by the same amount to 29.3 million pounds at March end.

T.E.B. TO MOVE TO NJ

The Textile Economics Bureau, Inc., which has been located in New York since its founding in 1935, will be moving to New Jersey in the near future.

While plans are incomplete at this time, they call for a move to 101 Eisenhower Parkway, Roseland, NJ 07068. The building is located at the intersection of Eisenhower Parkway and Interstate 280.

IMPORT-EXPORT REVIEW

The principal data sources for this annual article and accompanying tables on U.S. exports and imports of the man-made fibers and products are the U.S. Census Bureau and the Department of Agriculture.

Import data are given on pages 52, 53, 58 and 61, while the details of country of origin for selected fiber imports are on pages 51, 53 and 54. Additional country-of-origin details on certain man-made fiber imports were given on page 28 of the recent February issue.

Export data are covered on pages 55 and 58, together with the detail of certain export items by country of destination on pages 56 and 57.

EXPORTS, IMPORTS & BALANCE

U.S. exports of man-made fibers and products during 1980 totaled 2,079,313,000 pounds, a new record high, or 14% more than the 1,830,331,000 pounds sent abroad in 1979.

The 1980 imports of man-made fibers and manufactures totaled 636,319,000 pounds, as compared with the 636,025,000 pounds brought in the previous year. Reference may be made to the page 58 table.

As is customary in these annual export-import reviews, the foreign trade data of the Census Bureau, which may be reported in units other than pounds (dollars, dozens, yards, etc.), have been converted to their poundage equivalents so as to afford a single, overall annual figure showing the balance of trade. Data of the Department of Agriculture are used for this purpose.

As shown on page 58, the 1980 ***export*** balance was 1,442,994,000 pounds, which compares with the previous high of 1,194,306,000 pounds set in 1979. Thus a net U.S. export balance was obtained for the eighth consecutive year, following seven consecutive years of import balances.

The export, import and balance data of the page 58 table cover the cellulosic and non-cellulosic man-made fibers only; textile glass fiber is excluded.

THE IMPORT SITUATION

The principal man-made fiber items imported into the United States prior to 1969 were in the form of raw materials, i.e., filament yarn, staple, etc. Since 1969, imports of man-made fiber semi-manufactures and manufactures have exceeded these raw material items on a poundage basis except for 1971, when they

The three section totals on this page agree with the corresponding data on pages 52 and 53 herewith.

The by-country data in the "Imports of Man-Made Fiber" table above include singles, monofilaments & strips (see page 28 of the February 1981 and the corresponding pages of earlier February ORGANON issues), plied filament yarn, staple, grouped filaments, waste, spun yarns and textile glass fiber. The "products not detailed" in the above table comprise handwork yarns & sewing thread, other yarns - NES and sliver, tops & roving.

NOTE: Imports of man-made fiber apparel by country of origin are shown on page 53.

NES - Not elsewhere specified.

NA - Not available.

* These items are not reported by the Census as cellulosic vs. non-cellulosic. Any separation between cellulosic and non-cellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

were about equal.

The poundage of man-made fiber yarn, monofilaments, staple, tow and waste brought into this country last year totaled 95,675,000, which was 14% less than the 111,052,000 pounds brought in the previous year. Imports of non-cellulosic fibers totaled 76,728,000 pounds or 4½% less than the 80,449,000 pounds of 1979. Rayon+acetate imports at 18,947,000 pounds fell by 38% from 30,603,000 pounds.

Imports of man-made fiber apparel increased by 18,913,000 pounds, or 5½%, last year. The 1980 total of 378,521,000 pounds represented about 59% of all imports of man-made fiber & manufactures.

A summary of these total imports for consumption is given on page 58.

U.S. IMPORTS OF APPAREL

The table opposite shows U.S. general imports of man-made fiber apparel in millions of equivalent square yards of fabric.

Asia continues to dominate the apparel import picture for man-made fibers, with 87% of the 1980 total having come from that region. The Americas accounted

SOURCE: U.S. Census Bureau Report.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of non-cellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. This figure is an obvious misclassification. Most of this poundage should be included in filament yarn.

(Continued from page 53)

for 12% last year, with the balance of 1% coming from Europe.

Four Asian countries, i.e., Taiwan, Korea, Hong Kong and the Philippines, account for 76% of all U.S. imports of man-made fiber apparel last year. In 1979 those countries represented 71% of the total.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census.

The man-made, cotton and wool manufactures data are from *"Cotton and Wool Situation"*, a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and non-cellulosic fibers only; textile glass fiber is excluded.

a. E means a net export balance; I is a net import balance.

b. The fibers included are shown as "Total Man-Made Fiber Above" on pages 52 and 55 herewith.

c. Man-made fiber equivalent.

d. Raw cotton equivalent. Data are similar to those on page 37 of the March 1981 ORGANON.

e. Raw wool content. The data differ from those on page 37 of the March 1981 ORGANON to the extent that noils and waste are included here.

(Continued from page 55)

In the Americas, Mexico, Haiti and the Dominican Republic accounted for 71% of the apparel imported from the Americas into the United States.

Europe remains a minor supplier. Within the small European total, the largest supplier is Italy.

EXPORTS BY DESTINATION

A picture of the by-country and regional distribution of the principal man-made exports in 1979 and 1980 is afforded by the table on pages 56 and 57. It will be noted that China is the largest importer of U.S. man-made fibers, followed by Canada, Belgium/Luxembourg and the United Kingdom.

Exports of rayon+acetate yarn, monofil & strips decreased by 3,862,000 pounds from 1979 to 1980. According to Census data, Belgium/Luxembourg is the largest customer of these products, taking 9,474,000 pounds in 1979 and 8,529,000 in 1980. However, the official Belgian data show imports of rayon+acetate yarn from the United States as being only a fraction of these totals. In view of this, it must be adduced that Belgium was largely a sales or billing address and/or port of entry for a majority of these poundages reported as being exported there.

Cellulosic staple+tow exports (excluding exports of acetate cigarette filtration tow) decreased 33% to a level of 71,072,000 pounds, with the Philippines and Venezuela the largest customers.

Non-cellulosic textile yarn exports increased by 50,688,000 pounds from 1979 to 1980. The most significant increases were in exports to China, Belgium/Luxembourg and the United Kingdom, three of the largest customers. Last year's exports of non-cellulosic industrial yarn, monofil & strips at 127,388,000 pounds were 12% higher than the previous year.

Exports of non-celluslosic staple+tow at 732,474,000 pounds were 11% more than the previous year. Exports to China, the largest customer of these products at 314,004,000 pounds, more than doubled from 1979 to 1980.

THE EXPORT PICTURE

The page 58 table shows that cellulosic and non-cellulosic fiber exported from the United States last year constituted 63% of the total man-made fiber and products export poundage. Man-made fiber apparel accounted for only 6% of the total. As noted, exports of textile glass fiber, which are shown in the page 55 table, are excluded from the page 58 table.

ESTIMATED U.S. APPAREL MARKET

According to preliminary calculations, the total fiber available for apparel consumption in the United States in 1980 was the equivalent of 5,622 million pounds of cotton, wool and man-made fibers. This represents a decrease of 1% from 1979 levels. The import share of the U.S. apparel market in 1980, based on the assumptions detailed below, is estimated at 22.7%, an increase of 1.8 percentage points from 1979.

To be noted in the following description of the methodology, all figures represent poundages **available** for consumption rather than actual consumption within any specific calendar year.

In the case of the man-made fibers, the starting point is the total domestic shipments for apparel uses reported to this Bureau by U.S. man-made fiber producers. That portion of the known imports of man-made fibers which goes into apparel applications is then estimated. The sum of these two figures represents the equivalent of mill consumption of man-made fibers for apparel.

Then, the portion of known fabric imports which is consumed in apparel uses is estimated and added, while the corresponding exports are deducted. The total of domestic shipments plus imports of fiber and net imports of fabric represents apparent consumption of fiber and fabric at the garment cutting level. Finally, by adding in the known data on imports of garments and subtracting the corresponding exports, the figure labeled Total Available for Domestic Consumption is derived.

In the case of cotton, the government series on cotton consumption in the United States is the starting point. The proportion of raw cotton consumption destined for apparel uses is then estimated on the basis of the ratios of recent years and the resulting figure appears on the line labeled Fabric from U.S. Mills. Then the apparel component of imported yarn and fabric is estimated and added. The sum of these three items becomes the line ORGANON End Use Survey in the table. Finally, the known imports and exports of garments are factored in and the result is the Total Available figure.

For 1979, the data have been revised as between cotton and man-made fiber, although the total remains the same at 5,672 pounds.

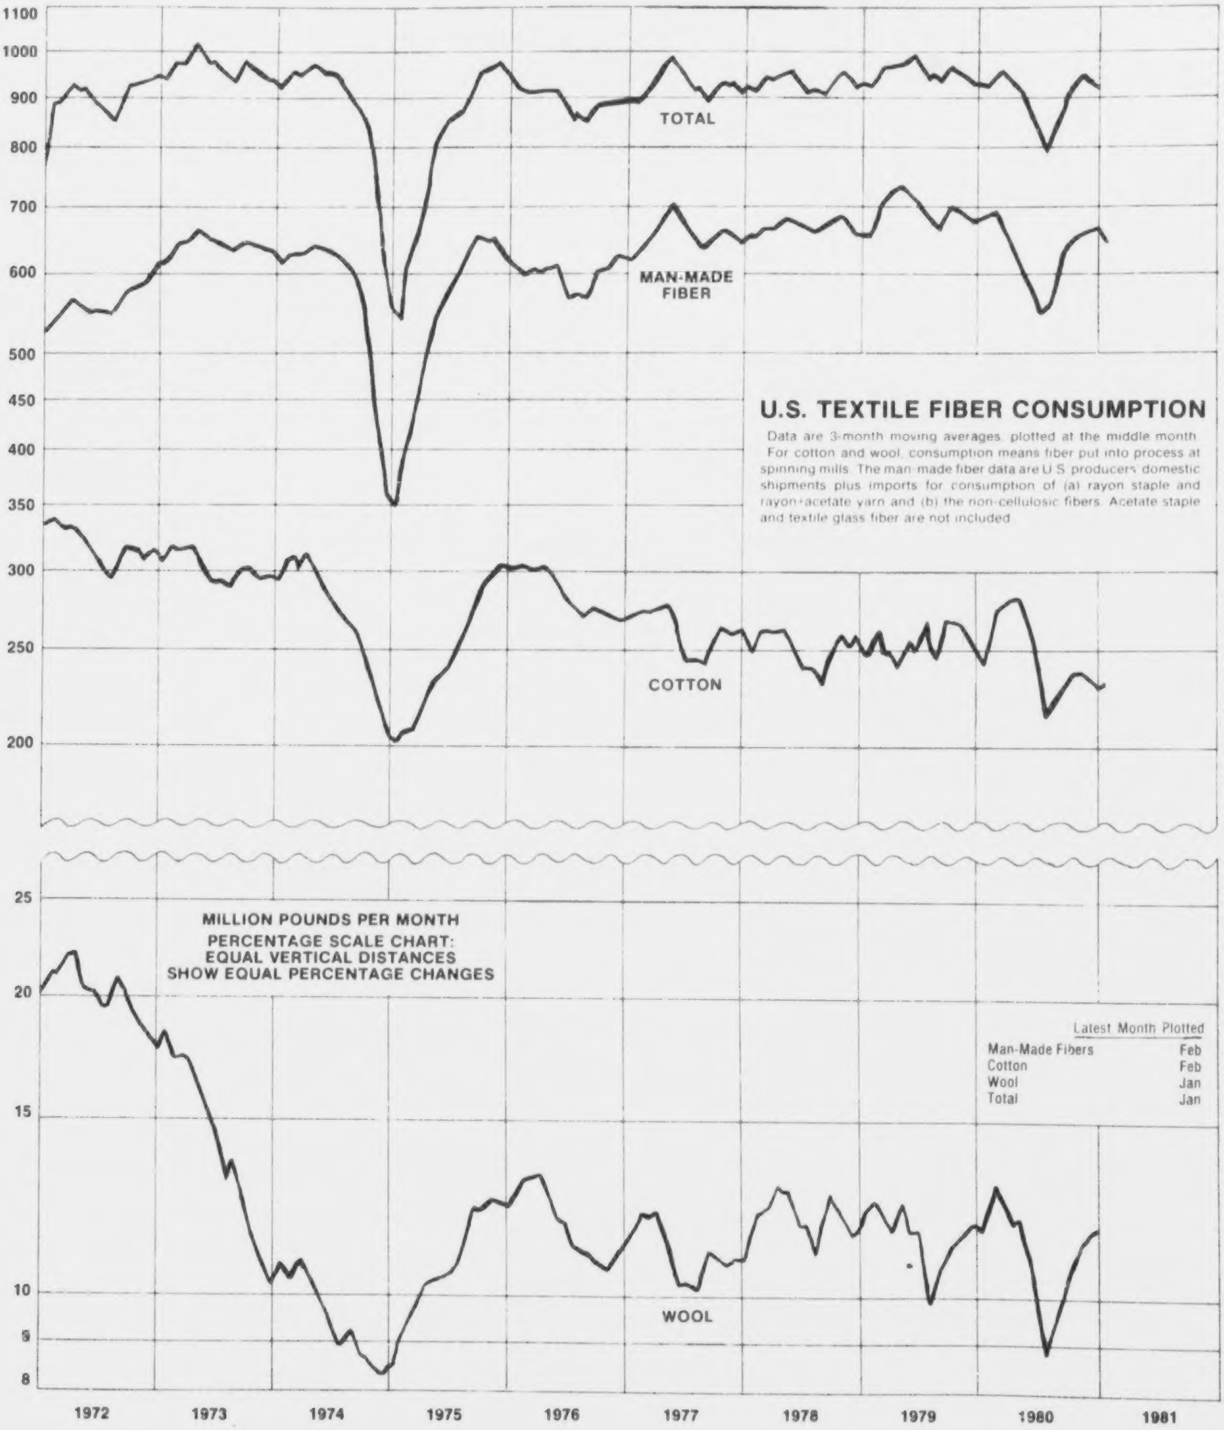
3. See page 174 of the November 1980 ORGANON issue.
4. Domestic shipments of man-made fibers used in calculating apparel end uses.
5. Grand Total man-made fiber imports from page 52 herewith less estimated poundages for nonapparel uses.
6. Total man-made fiber fabric imports from page 37 of the March 1981 ORGANON issue less estimated poundages for nonapparel uses.
7. Exports of spun yarn, thread and fabric from page 37 of the March 1981 ORGANON issue less estimated poundages for nonapparel uses.



U.S. TEXTILE FIBER CONSUMPTION

Data are 3-month moving averages, plotted at the middle month. For cotton and wool, consumption means fiber put into process at spinning mills. The man-made fiber data are U.S. producers' domestic shipments plus imports for consumption of (a) rayon staple and rayon+acetate yarn and (b) the non-cellulosic fibers. Acetate staple and textile glass fiber are not included.

MAY
1981

MONTHLY REVIEW

FIRST QUARTER U.S. MAN-MADE FIBER OUTPUT (EXCEPT ACETATE STAPLE+TOW AND RAYON, SARAN & SPANDEX YARN+MONOFILAMENTS) TOTALED 2,476.8 MILLION POUNDS. FOLLOWING IS THE FIRST QUARTER 1981 AND THE FOURTH QUARTER 1980 PRODUCTION (MILLION POUNDS) AND THE PERCENTAGE CHANGE: ACETATE YARN 61.4 & 68.9 & -11%; RAYON STAPLE 116.3 & 102.0 & +14%; NON-CELLULOSIC FIBER 2,062.2 & 2,145.4 & -4%; TEXTILE GLASS FIBER 236.9 & 217.7 & +9%; AND THE TOTAL OF THESE FIBERS 2,476.8 & 2,534.0 & -2½%. PG 67

NON-CELLULOSIC SHIPMENTS AT RECORD HIGH IN APRIL

Producers' shipments of non-cellulosic fibers (except saran and spandex) were at a new record high level of 760.1 million pounds, 1% more than the previous record of 753.8 million pounds delivered in December 1980 and 9½% above the 694.6 million pounds shipped in March this year. Shipments of polyester filament yarn, at 123.6 million pounds, were at their highest level since March 1977.

NON-CELLULOSIC YARN SHIPMENTS UP 4½% IN APRIL

April deliveries of non-cellulosic yarn+monofilaments (except saran and spandex) totaled 359.5 million pounds, 4½% more than the 343.2 million pounds shipped last month and the highest monthly total since the record 361.9 million pounds delivered during May 1979. However, for the first four months of 1981, shipments totaled 1,335.4 million pounds or 1% less than the 1,346.5 million pounds delivered during the corresponding January-April period last year.

NON-CELLULOSIC STAPLE+TOW SHIPMENTS INCREASED 14% LAST MONTH

Shipments of non-cellulosic staple+tow+fiberfill totaled 400.6 million pounds in April, an increase of 14% over March shipments of 351.4 million pounds and only 1% below the record shipments of 403.8 delivered during December 1980. January-April 1981 deliveries totaled 1,452.5 million pounds, an increase of 3½% over the 1,402.9 million pounds shipped during the same 1980 period.

APRIL AND MARCH SHIPMENTS COMPARED

Following is a comparison of total April shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with March (million pounds), and the percentage change, respectively: nylon industrial 35.9 & 37.2 & -3½%; low denier industrial 2.8 & 3.8 & -26%; carpet 73.4 & 65.3 & +12%; textile 37.3 & 38.4 & -3%; polyester industrial 29.0 & 27.3 & +6%; low denier industrial 2.9 & 2.5 & +16%; textile 123.6 & 111.3 & +11%; olefin 54.6 & 57.4 & -5%; and the total of these fibers 359.5 & 343.2 & +4½%.

Similarly, for non-cellulosic staple+tow+fiberfill, the corresponding data are: nylon 80.0 & 73.9 & +8½%; acrylic+modacrylic 65.3 & 63.8 & +2½%; polyester 243.6 & 202.5 & +20%; olefin+vinyon 11.7 & 11.2 & +4½%; and the total 400.6 & 351.4 & +14%.

CELLULOSIC SHIPMENTS 10% HIGHER IN APRIL

April shipments of acetate filament yarn and rayon staple+tow totaled 65.4 million pounds, 10% greater than the 59.4 million pounds delivered during

March. However, deliveries for the first four months of 1981, at 243.6 million pounds, were 13% below the 279.5 million pounds shipped during January-April 1980.

Acetate filament yarn shipments in April totaled 27.1 million pounds, 26% above March shipments and the highest monthly total since April 1980. For the year to date, shipments of 91.1 million pounds are 17% below those of January-April 1980.

Rayon staple+tow shipments during April totaled 38.3 million pounds, 1% more than the 37.9 million pounds delivered during March. However, January-April 1981 shipments of 152.5 million pounds were 10% below the 169.2 million pounds shipped during the first four months of 1980.

NON-CELLULOSIC STOCKS DECLINE 7½%

Stocks of non-cellulosic fibers (except saran and spandex) as of April 30th totaled 563.4, 7½% less than the level of 610.7 million pounds on March 31st. Assuming a 30-day month, end-of-April stocks represented a 22-day supply as compared with the end-of-March supply of 26 days.

On a by-fiber basis, the number of days supply on hand as of April 30th was: nylon yarn 23; polyester yarn 18; olefin yarn 33; nylon staple 13; acrylic+modacrylic staple 31; polyester staple 22; and olefin+vinyon staple 39.

APRIL ORGANON CORRECTION

On page 55 of the April ORGANON, the following changes should be made to the 1980 exports of man-made fibers in Thousand Dollars:

ITEM	WAS	TO BE
Acetate - Other Rayon - High Tenacity - Other	28155	28135
Subtotal R+A Yarn	32133	32113
Nylon Textured Yarn	19723	72940
Subtotal NC Yarn	435334	488551
TOTAL MAN-MADE ABOVE	1099492	1152689
GRAND TOTAL ABOVE	1153761	1206958

U.S. COTTON CROP

The USDA has recently released its final report on the 1980 (season 1980-1981) domestic cotton crop, putting it at 11,122,100 bales of 480 pounds net weight. Relative to the initial August first forecast, the final crop turned out to be 1,690,200 bales smaller. The 1980 crop was 3,507,200 bales, or 24% smaller than last year's 14,629,300 bales and 629,300 bales less than the average

2

output of 11,751,400 bales for the preceding 5-year period (1975-1979).

The final report also shows that of the 14,533,800 acres planted, 1,319,000 acres, or 9%, had been abandoned, resulting in a harvested acreage of 13,214,800 acres. This compares with the acreage planted to the 1979 crop of 13,947,500 acres, abandonment of 1,116,600 acres, or 8%, and a harvested acreage of 12,830,900 acres. The harvest acreage for the preceding five years has averaged 11,638,600 acres. The yield of 404 pounds per acre in 1980 compares with 547 pounds per acre last year and an average yield of 481 pounds per acre over the past five years.

1981 COTTON CROP PLANTINGS

As of March first, the USDA reported that domestic cotton growers intended to plant 14,483,800 acres of cotton for the 1981 (1981-1982) crop year. This compares to the 14,533,800 acres planted to the 1980 crop.

If the abandonment rate approximated the average of the past five years, or some 7¼%, then the harvested acreage would be some 13,433,700 acres. This would yield a crop of some 13.2 million bales at the average yield of the past five years (471 pounds per acre). If the yield were equal to the low of the past five years (404 pounds per acre in 1980), then the crop would be 11.3 million bales. If the yield were equal to the high of the past five years (547 pounds per acre in 1979), then the crop would be 15.3 million bales.

MAN-MADE FIBER OUTPUT DECLINED 2½% IN FIRST QUARTER

Production of man-made fibers (except rayon, saran & spandex yarn and acetate staple) totaled 2,476.8 million pounds in the latest quarter, a decline of 2½% from the 2,534.0 million pounds produced during the fourth quarter of 1980 and 3½% less than that produced during the first quarter of 1980.

First quarter 1981 production comprised 61.4 million pounds acetate yarn+monofilaments, 116.3 million pounds rayon staple+tow, 979.2 million pounds non-cellulosic yarn+monofilaments (except saran and spandex), 1,083.0 million pounds non-cellulosic staple+tow+fiberfill and 236.9 million pounds of textile glass fiber.

Deliveries of man-made fibers (except rayon, saran & spandex yarn and acetate staple) totaled 2,438.2 million pounds in the January-March 1981 quarter, 6½% less than the 2,608.3 million pounds shipped the previous quarter and 5½% less than deliveries during the corresponding 1980 period.

NON-CELLULOSIC YARN+MONOFILAMENT PRODUCTION OFF 2% IN LATEST QUARTER

Production of non-cellulosic yarn+monofilaments (except saran and spandex) in the first quarter of 1981 fell 2%, to 979.2 million pounds, from fourth quarter 1980 output of 1,001.5 million pounds. Compared with a year ago, production in the January-March 1981 quarter was 3½% less than the 1,017.4 million pounds produced in the first quarter of 1980.

Deliveries of non-cellulosic yarn+monofilaments (except saran and spandex) totaled 975.9 million pounds during the first quarter of 1981, 5% below the 1,024.9 million pounds shipped during fourth quarter 1980 and 4% below the level of the corresponding 1980 quarter.

PRODUCTION OF NON-CELLULOSIC STAPLE+TOW DECLINED 5½% LAST QUARTER

January-March 1981 output of non-cellulosic staple +tow+fiberfill totaled 1,083.0 million pounds, a decline of 5½% from the 1,143.9 million pounds produced during the fourth quarter of 1980. First quarter 1981 production was 2% below the 1,105.4 million pounds produced during the corresponding 1980 period.

Shipments of non-cellulosic staple+tow+fiberfill during the first quarter of 1981 fell by 8%, to 1,051.9 million pounds, from the 1,142.3 million pounds shipped during the October-December quarter last year. January-March 1981 shipments were 2% below the 1,071.1 million pounds shipped during the first quarter of 1980.

ACETATE YARN PRODUCTION DECLINED 11% IN FIRST QUARTER

Acetate yarn production totaled 61.4 million pounds in the January-March 1981 quarter, 11% less than the 68.9 million pounds produced during the previous quarter and 23% less than that produced during the corresponding 1980 quarter.

Shipments of acetate yarn totaled 64.0 million pounds during the first quarter of 1981, a decline of 6% from fourth quarter 1980 levels. Compared to first quarter 1980, deliveries declined 21% in this latest quarter.

PRODUCTION OF RAYON STAPLE+TOW INCREASED 14% IN FIRST QUARTER

First quarter 1981 production of rayon staple+tow, at 116.3 million pounds, increased 14% from the fourth quarter 1980 level of 102.0 million pounds. However, first quarter 1981 output was 8½% less than the 126.9 million

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" non-cellulosic yarns (chiefly saran & spandex) are available annually only; see pages 20 & 21 of the February ORGANON for further details on these yarns.

b. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

c. Yarn imports include singles and plied.

d. Acetate staple+tow data are available annually only; see pages 20 & 21 herewith for further details.

e. These figures are composites of the nylon, acrylic+modacrylic, polyester and olefin staple imports, i.e., Commodity Numbers 309.4338, .4342, .4345 & .4346.

---

pounds produced during the corresponding 1980 period.

Shipments of rayon staple+tow during the January-March 1981 quarter were 114.2 million pounds, an increase of 4% over the 109.6 million pounds delivered in the fourth quarter of 1980. Compared with first quarter 1980 shipments of 128.2 million pounds, shipments of rayon staple+tow during the January-March 1981 quarter declined 11%.

a. Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.

b. Small poundages of polyester are included in All Other

c. Small poundages of olefin are included in All Other.

d. Small poundages of nylon and polyester are included in All Other.

e. Other Broad Woven–except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e., industrial applications are in All Other.

f. Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.

g. All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing. Also includes Indirect Exports starting 1st Quarter 1980.

h. These poundages are included in the total domestic area above.

TEXTILE GLASS PRODUCTION INCREASED 9% IN FIRST QUARTER

Output of textile glass fiber in the first quarter of 1981 totaled 236.9 million pounds, an increase of 9% over the 217.7 million pounds produced during the previous quarter. However, first quarter 1981 production was 2% below the 242.3 million pounds produced during the corresponding 1980 period.

quarter totaled 232.2 million pounds, 12% below shipments of the fourth quarter of 1980 and also first quarter 1980.

FILAMENT YARN SHIPMENTS BY TRADE OR END USE

The table on page 70 details domestic filament yarn shipments by primary trade or end use for the most recent periods.

A comparison of first quarter 1981 shipments with those of fourth quarter 1980 shows that only polyester shipments to the flat knit trades, olefin shipments for carpet backing and other broad woven trades, nylon shipments to the narrow woven trades and nylon, polyester+olefin shipments for rope, cordage & fishlines increased.

The biggest declines were in shipments to the knit trades, particularly circular knit. Shipments of nylon to the circular knit trades declined 24% to 12.3 million pounds and polyester shipments fell by 26% to 93.7 million pounds. Acetate shipments to circular knits were unchanged at 0.7 million pounds. Deliveries of

SOURCE: U.S. Census Bureau, *Current Industrial Report MQ-22T.*

a. Includes data from all types of broad woven fabric mills, i.e., cotton, man-made, woolen & worsted and tire cord & fabric mills.

b. Includes 100% spun rayon and acetate as well as rayon and/or acetate/cotton blends regardless of blend level.

c. Regardless of blend level.

d. All Other Yarns includes spun nylon, other blends, silk and paper.

acetate to the flat knit trades declined 16% to 26.7 million pounds and nylon shipments fell by 11% to 43.3 million pounds. However, polyester flat knit shipments increased by 1½% to 23.4 million pounds.

Nylon carpet face yarn shipments declined 10% in the first quarter of 1981 to 184.0 million pounds from the 204.2 million pounds shipped during the fourth quarter of 1980. Similarly, olefin carpet face yarn deliveries were off 10% in the latest quarter. First quarter 1981 shipments of nylon tire cord fell 5% to 51.8 million pounds and polyester tire cord deliveries were 8½% less than the 47.2 million pounds shipped during the fourth quarter of 1980.

Shipments of feed and producer-textured (non-carpet) yarns during the latest quarter were below their fourth quarter 1980 totals. Nylon shipments fell 15% to 39.0 million pounds, polyester deliveries were 1½% less, at 248.3 million pounds, and olefin shipments declined 24% to 9.7 million pounds.

STAPLE+TOW SHIPMENTS BY TRADE OR END USE

The table on page 71 shows domestic shipments of staple+tow by primary trade or end use for the most recent periods.

Comparing first quarter 1981 with fourth quarter 1980 shows that acrylic+modacrylic pile fabrics, rayon broad woven, polyester fiberfill and olefin broad woven goods all recorded significant gains.

Shipments of acrylic+modacrylic to the sweater trades declined 11% to 63.9 million pounds whereas those of nylon, polyester and rayon increased 83% to 4.2 million pounds. Acrylic+modacrylic pile fabrics increased 26%, but polyester pile fabrics shipments declined 7%. Deliveries of polyester to the other knit trades declined 5% to 76.8 million pounds and shipments of acrylic+modacrylic fell by 14% to 24.1 million pounds.

Polyester shipments to the broad woven trades declined 17% to 268.4 million pounds. For nylon, the decline was 28% to 12.4 million pounds and for acrylic+modacrylic the decrease was 18% to 9.5 million pounds. However, rayon shipments to these trades increased 8½% to 57.5 million pounds.

Deliveries of nylon, polyester and olefin carpet face yarns all declined in the latest quarter as compared with the preceding quarter. For nylon, the decline was 5% to 185.7 million pounds, polyester shipments fell by 30% to 27.0 million pounds and olefin deliveries declined by 7½% to 16.1 million pounds.

Polyester fiberfill shipments increased 9% to 57.1

a. Felts are not included.

b. Includes polyester blanketing.

c. Includes filament & spun yarn fabrics.

d. Polyester blanketing is included with polyester/wool blend fabrics above.

e. Includes bedspread fabric (except glass).

f. 100% or chiefly man-made fibers; chief fiber not specified. Also includes small poundages of silk, tie, twisted paper yarn and girdle & swimwear fabrics.

g. Includes a nominal amount of cotton and some steel.

(Continued from page 72)

million pounds and nylon+polyester flock shipments were 36% higher at 3.8 million pounds. Deliveries of rayon to the nonwovens trades fell by 2½% in the latest quarter, totaling 32.7 million pounds, and polyester shipments to nonwovens decreased 5½% to a first quarter 1981 level of 36.1 million pounds.

Drawing the yarn and staple data together, from pages 70 and 71, the distribution between apparel, home furnishings and industrial is as follows:

	1977	1978	1979	1980	1st Q 1981
Apparel	3186	3165	3153	3195	750
Home Furnishings	2693	2887	3034	2687	704
Industrial	1645	1814	2038	1774	460
Total	**7524**	**7866**	**8225**	**7656**	**1914**

FIRST QUARTER 1981 EXPORTS INCREASE 6%

The table on page 77 details U.S. man-made fiber exports as reported by the U.S. Census Bureau. These differ from the exports shown on pages 68 and 69 in that they are exports from all sources (not just fiber producers) and in timing. The exports on pages 68 and 69 are direct export shipments by the fiber producer and were shipped by the fiber producer during that quarter. These shipments, plus any from other sources such as yarn texturizers, throwsters, etc., are counted by the Census in the quarter they are shipped from a U.S. port, which may or may not coincide with the shipping quarter.

The U.S. Census Bureau reports that 363,619 thousand pounds of man-made fibers were exported

SOURCE: U.S. Census Bureau, *Current Industrial Report MQ-22T.*

a. Includes flat, faille and canton crepes.
b. Includes marquisettes, ninons, sheers, industrials and satins.
c. Includes overdyed fabrics.
d. Includes seersucker.
e. Includes bedspread fabric (except glass).
f. Includes tie, girdle & swimwear and twisted paper yarn fabrics.

during the first quarter of 1981, an increase of 6% over the 343,093 thousand pounds exported during the fourth quarter of 1980. Exports of rayon+acetate filament yarn increased 18% to 8,397 thousand pounds and rayon+acetate staple+tow exports, at 15,914 thousand pounds, increased 23%. The only cellulosic category to show a decline was textured filament yarn.

U.S. exports of non-cellulosic yarn+monofilaments increased 26% to 115,733 thousand pounds in the latest quarter. However, exports of non-cellulosic staple+tow declined 4½% to 187,034 thousand pounds during first quarter 1981. Most of this decline was for polyester staple which fell 14% to 108,893 thousand pounds.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census.

The man-made, cotton and wool manufactures data are from *Cotton and Wool Situation*, a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and non-cellulosic fibers only; textile glass fiber is excluded.

a. E means a net export balance; I is a net import balance.

b. Acetate tow is excluded.

c. The fibers included are shown as "Total Man-Made Fiber Above" on page 79 herewith.

d. Man-made fiber equivalent.

e. Raw cotton equivalent. Data are similar to those on page 37 of the March 1981 ORGANON issue.

f. Raw wool content. The data differ from those on page 37 of the March 1981 ORGANON issue to the extent that noils and waste are included here.

SOURCE: U.S. Census Bureau Report.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of non-cellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

TWO BOOK REVIEWS

SHUTTLELESS WEAVING MACHINES

O. Talavasek and V. Svaty. Elsevier Scientific Publishing Company, P.O. Box 211, Amsterdam, The Netherlands. 626 pages. 1981, $109.75 (Dfl 225.00). Distributed in the U.S. and Canada by Elsevier North-Holland, Inc., 52 Vanderbilt Avenue, New York, NY 10017.

This book represents the third in the Textile Science and Technology Series and provides a comprehensive review of shuttleless weaving machines. The previous two volumes dealt with open-end spinning and the processing of polyester fibers.

The book begins with a historical review of the development of weaving and the basic weaving mechanisms. Covered in this part of the book are such subjects as: the weaving technique; weaving machines; drive, clutch & brake; warp let-off; fabric draw-off; cam-operated shedding

13

motions; dobbies; jacquards; and weft beat-up mechanisms.

The main section of the book deals with various methods of shuttleless weaving such as: yarn preparation for shuttleless weft insertion; ballistic weft insertion; weft insertion by gripper projectiles; shuttle picking; jet picking; air-jet picking; rapier insertion; and multiphase weaving machines.

Next, the authors discuss the combined weaving and knitting systems and several practical aspects of weaving using shuttleless machines. The topics covered include weft change motions, stop motions, fabric selvedges and weaving machine accessories.

The last few chapters in the book deal with manufacture and economics of shuttleless looms. The aspects covered in this section include the operation of the looms in the mill, the weaving mill itself, loom output, weaving economics and trends in the weaving industry.

The book will prove useful to anyone involved in the weaving field, from student to loom designer. The material has been arranged to make the information readily accessible.

PROCEEDINGS OF FIBER PRODUCER CONFERENCE 1980

Edited by D. D. Edie & J. K. Johnson. Continuing Engineering Education, Clemson University, P.O. Drawer 1607, Clemson, SC 29631. 170 pages. $25.00.

This book contains the papers presented at the Fiber Producer Conference 1980, which was held at the Textile Hall, Greenville, SC, on July 15-17, 1980. The conference was cosponsored by Clemson University, *Fiber Producer* magazine and Textile Hall Corporation.

The book is divided into twelve sections which deal with various aspects of fiber production. The topics covered include: pump maintenance & wear surface treatment; polymerization; waste reclamation; polymer distribution; fundamentals of fiber formation; inverters & drives; computer control; finishes; high-speed winding; staple processing; and fiber texturing.

Most of the papers are technical in nature, dealing with specific aspects of fiber production. The final paper, on air-texturing, deals with both the technical aspects of that process as well as possible uses for the finished yarn.

Overall, the papers presented at this conference give the reader an overview of the current technology as it applies to fiber production.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. non-cellulosic. Any separation between cellulosic and non-cellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February 1981 issue for annual data.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February 1981 issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February 1981 issue for annual data.

FEATURING MAN-MADE FIBERS

VOL. LII • NO. 6

JUNE 1981

WORLD MAN-MADE FIBER SURVEY

This issue features our annual survey of the world man-made fiber producing industry.

Earlier years' world data for most of the tables presented in this issue will also be found in the January 1962 ORGANON Base Book and in the June 1966, June 1970, June 1979 and June 1980 issues.

It will be noted that, again this year, all data in this issue are in *metric tons* except for the U.S. data on pages 110-112. Several tables of this issue will also be published in the July issue showing data in *millions of pounds*, i.e., pages 81, 83-88, 91 and 92.

ACKNOWLEDGEMENTS

The cooperation of more than 100 foreign man-made fiber associations, producing companies and individuals, as well as the U.S. Foreign Service posts reporting through the Office of Textiles, Domestic and International Business Administration, U.S. Department of Commerce, is acknowledged with thanks. If readers find any data omitted or incorrect, the editors will welcome information on them.

The silk and man-made fiber data are on a calendar-year basis, while the figures for cotton and wool are on a seasonal basis.

MAN-MADE FIBERS: Data are from pages 86 and 88, as noted. Textile glass fiber and olefin production on page 92 are not included.

COTTON: International Cotton Advisory Committee. Also see October 1980 ORGANON.

WOOL: Commonwealth Secretariat. The data are on a scoured basis. Also see the December 1980 ORGANON issue.

SILK: International Silk Association; Food and Agriculture Organization of the United Nations.

OLEFIN DATA PRESENTATION

The method of presenting world olefin data in recent June issues is continued this year, i.e., all olefin data are presented separately from the other non-cellulosic fibers.

The U.S. olefin production data published regularly in the ORGANON include yarn, monofil, staple, film fiber and spunbonded polypropylene. Published Italian and Japanese olefin data show the production of yarn+monofilaments and staple+tow. But data from these countries on the production of film fiber, such as is used in sacks, fishing nets and carpet backing, are not available.

On the other hand, the published man-made fiber data of many other countries show little or no olefin fiber production at all, e.g., France, West Germany, the United Kingdom.

To accommodate this problem, the non-cellulosic data except olefin are presented on pages 83-86.

Then in the table on page 84, the olefin data of most countries are shown. These data consist of (a) the "official" country data published by a government, an association or other statistical agency. Then added thereto is (b) an estimate of the olefin fiber (mainly slit and split film fiber) believed to have been produced in the country.

IMPORTS, EXPORTS & BALANCE

The by-country production, import, export and net available or retained supply of four categories of man-made fiber are tabulated on pages 90 and 91 covering calendar 1979 and 1980. The 1979 data presented in the June 1980 ORGANON issue have been revised for a number of countries owing to more complete data at this time.

In the page 90 and 91 tables, "yarn" includes tire cord and tire cord fabric, filament yarn and monofilaments. Staple includes tow, fiberfill, tops and advanced waste. Unprocessed waste is not included.

In a few cases where a country's import or export data could not be accurately separated as rayon+acetate vs. non-cellulosic fiber, a division was estimated.

Except for spun yarn imports and exports, imports and exports of manufactured and semimanufactured man-made fiber products (e.g., fabric dresses, hosiery, etc.) are not included in the data.

The tables show the net import-export tonnage of spun yarn under the "Total Man-Made Fiber" columns; space does not permit the presentation of the import and export data separately.

Y means yarn+monofilaments. S means staple+tow+fiberfill. TOT means total.

The producing capacity, in operable condition, is shown on an annual basis as of March 1981 (1981) and December 1982 (1982).

These totals do not contain data for the fibers produced in North Korea.

a. Benelux includes Belgium, Netherlands and Luxembourg.

Textile glass fiber is defined on page 93. The textile glass fiber producing capacity, in operable condition, is shown on an annual rate basis as of March 1981 (1981) and December 1982 (1982).

a. The data for East Europe do not include estimates for the U.S.S.R.

b. The Other Africa, Asia & Oceania countries are Australia, India and South Africa.

Y means yarn+monofilaments. **S** means staple+tow. **TOT** means total.

The producing capacity, in operable condition, is shown on an annual basis as of March 1981 (1981) and December 1982 (1982).

These totals do not include data for the Indonesian pilot plant nor production of cellulosic fibers in North Korea.

Production and producing capacity by country, divided as between rayon and acetate yarn, is given on page 89. Also note page 86 for data on production of acetate staple and cigarette tow.

H means high tenacity (tire & industrial type) viscose rayon yarn. **R** means regular+intermediate tenacity viscose rayon yarn. **C** means cuprammonium rayon yarn. **A** means acetate+triacetate yarn.

[a] "Other West Europe" comprises Finland, Greece, Portugal, Switzerland and Turkey.

[b] "Other Africa, Asia & Oceania" comprises Bangladesh, People's Republic of China, Republic of China (Taiwan), Egypt and Iraq.

The olefin data shown comprise (a) the tonnages of yarn, monofilaments and staple plus film fiber reported by official sources, such as governments, trade associations or other statistical agents plus (b) estimates of the additional tonnages of olefin fiber not included in the aforementioned data. Note text on page 82.

No attempt is made to strike a world total inasmuch as data are incomplete for a number of countries, particularly in Latin America, East Europe and Other Africa, Asia & Oceania.

* Data for People's Republic of China, North Korea & U.S.S.R. are not included here.

a. Acetate includes triacetate.

b. Acrylic includes modacrylic.

c. All Other includes 3 aramid, 1 azlon, 2 biconstituent, 4 fluorocarbon, 1 polycarbonate, 1 polychlal, 1 polyesteramide, 1 polyvinylfluoride, 1 promix, 8 saran, 19 spandex or elastomer, 4 vinal and 8 vinyon plants, for a total of 54 plants producing these other fibers.

WORLD MAN-MADE FIBER PRODUCERS

ARGENTINA

COAFI S.A.
Polyester Buenos Aires (yarn)

DUCILO S.A.I.C.
Nylon 66 Berazategui & Mercedes *Nylon Ducilo* (yarn)
Spandex Mercedes (fused multifil or coalesced monofil)

FIBRAS INDUSTRIALES S.A.C. e I.
Nylon 6 Quilmes *Caprolan* (yarn & staple)

HISISA ARGENTINA S.A.I.C.I.F.
Acrylic Baradero *Cashmilon* (staple)

MITEXTIL S.A.
Nylon 6 Buenos Aires (yarn)

M. NAHMIAS S.A.C.I.
Polyester Buenos Aires (yarn)

NICIEZA y TAVERNA HNOS. S.A.
Nylon 6 Chivilcoy *Grilon* (monofil)

PETROQUIMICA SUDAMERICANA S.A.
Nylon 6 Olmos-La Plata (yarn & staple)
Polyester Olmos-La Plata *Dicrolene* (yarn & staple)

RHODIA ARGENTINA QUIMICA e TEXTIL
Acetate Quilmes (yarn)
Polyester Quilmes *Tergal* (yarn)

SOCIEDAD NUEVAS INDUSTRIAS ARGENTINAS FIBRAS ARTIFICIALES S.A.I.C.F.I. (SNIAFA)
Nylon 6 Hernández-La Plata *Snialon* (yarn)
Rayon Plátanos (reg yarn & staple)

SUDAMTEX S.A. TEXTIL SUDAMERICANA
Polyester Azul *Acrocel* (staple)

VALENCIANA ARGENTINA S.A.
Nylon 6 Buenos Aires (yarn)

OLEFIN FIBER

MANUFACTURA FORTI ARGENTINA S.A.C.I.A.F.I. Buenos Aires (P yarn & staple)

PANAMERICA DE PLASTICOS S.A.I.C Olivos (P staple)

TEXTILYUTE S.A.I.C. Isidro Casanova (P film)

VINISA S.A.I.C. Buenos Aires *Rafistal, Strofil* (E & P monofil)

TEXTILE GLASS FIBER

VIDRIERIA ARGENTINA S.A. (VASA)
Llavallol *Texover*

AUSTRALIA

FIBREMAKERS LTD.
Nylon 66 Bayswater, Victoria *Bri-Nylon* (yarn & monofil)
Penrith, N.S.W. (tire cord)
Biconstituent Mulgrave, Victoria *Front Runner* (melded fabric)
Polyester Bayswater *Terylene* (yarn, staple & tow)

NOTES & DEFINITIONS FOR THIS WORLD DIRECTORY

This directory of producers separates the listing for each country into: (1) the cellulosic plus the non-cellulosic fibers (except olefin), (2) olefin fiber and (3) textile glass fiber.

● means that the company produces olefin fiber as well as other man-made fiber(s). For example, Brasil Viscose S.A. produces olefin fiber in Brazil as well as nylon and rayon. The nylon and rayon entries for this company are in one section and the olefin entry is shown in the Olefin Fiber section.

* indicates that a new plant, or facilities for producing a new product at an existing plant, is in the planning or construction stage; such facilities are not expected to be operable before 1982 or later. Other product-plants are operable today or are expected to be operable during 1981.

The locality shown is the plant site.

Yarn means filament yarn.

Monofil means an extruded monofilament and may be either a round or a rectangular (ribbon) cross-section. Monofilaments for bristles are excluded.

Film includes **Slit**: tape produced by slitting an already-attenuated wide sheet of olefin film; and **Split**: fibrillated slit film.

Not included in this survey is the slit film used for decorative or tying ribbon and such.

Captive means that most or all of the fiber produced is consumed by the company in a vertical operation.

GENERIC NAMES & TRADEMARKS

The generic fiber names used in this survey are mainly those promulgated by the U.S. Federal Trade Commission (FTC). Following are those generic names (in **bold** type) and a brief description of the fibers covered by each name.

The *italicized* words are trademarks. All other fiber names are generic and are shown in regular type.

TEXTILE GLASS FIBER

A fiber made in two primary forms, namely continuous strand and staple sliver. Continuous strand is drawn fiber (i.e., from a textile-type bushing), while staple sliver, which is produced in relatively small amounts, is a blown fiber.

Textile glass fiber is produced and sold as filament yarn, strand, roving, mat, chopped strand, milled fiber and staple yarn & sliver. See the complete definition on page 142 of the September 1980 ORGANON.

CELLULOSIC (ARTIFICIAL) FIBERS

Acetate. Cellulose acetate. Cigarette filtration tow is excluded.

Triacetate. Cellulose acetate, wherein not less than 92% of the hydroxyl groups are acetylated.

Rayon. Regenerated cellulose, including substitutions for not more than 15% of the hydrogens of the hydroxyl groups. Includes high wet modulus fiber.

Cupra means cuprammonium rayon.

The viscose rayon yarns are identified as ind (industrial or high tenacity yarn) and reg (regular or textile yarn).

NON-CELLULOSIC (SYNTHETIC) FIBERS

Acrylic. At least 85% acrylonitrile by weight.

Modacrylic. 35% to 84% acrylonitrile by weight, except when it qualifies as rubber.

Azlon. Regenerated natural protein.

Nylon. A long-chain synthetic polyamide in which less than 85% of the amide linkages are attached directly to two aromatic rings. The types are identified as 6, 66, etc. Where a company produces both type 6 and type 66, the designation 6/66 is used.

Aramid. A long-chain synthetic polyamide in which at least 85% of the amide linkages are attached directly to two aromatic rings. In this survey, any aramid data are included with nylon.

Olefin. At least 85% ethylene, propylene or other olefin units by weight, except amorphous (noncrystalline) polyolefins qualifying as rubber. E means Polyethylene and P means Polypropylene. Also see adjoining notes on olefin fiber.

Polyester. At least 85% by weight of an ester of a substituted aromatic carboxylic acid, including but not restricted to substituted terephthalate units, and parasubstituted hydroxybenzoate units.

Saran. At least 80% vinylidene chloride by weight.

Spandex. At least 85% of a segmented polyurethane.

Vinal. At least 50% by weight vinyl alcohol and wherein the vinyl alcohol plus acetal units are at least 85% by weight.

Vinyon. At least 85% vinyl chloride by weight.

Other man-made fibers included in this survey, but not listed by the FTC, are **Polycarbonate** (U.S.A.), **Polychlal** (Japan), **Promix** (Japan) and **TFE- & FEP-fluorocarbon** (Fluoro) (Japan, U.S.A. & U.S.S.R.).

Not covered in this survey are fibers which would fall under the FTC's generic designations of rubber, lastrile, metallic and novoloid. Fibers falling under the FTC designations of anidex and nytril are no longer produced.

International Standard #2076, "Generic Names of Man-Made Fibres," as promulgated by the International Organization for Standardization, lists some 23 names, of which the following are similar to the FTC designations: cupro, viscose, acetate, triacetate, acrylic, modacrylic, nylon or polyamide, polyester and glass. ISO also lists modal (regenerated cellulose obtained by processes giving a high tenacity and a high wet modulus), alginate (metallic salts of alginic acid), chlorofibre (similar to the FTC's saran and vinyon), elastane (similar to the FTC's spandex), elastodiene, fluorofibre, polycarbamide, polyethylene & polypropylene (similar to the FTC's olefin), polyurethane, trivinyl and vinylal (similar to the FTC's vinal).

AUSTRALIA *(Continued)*

UNITED CARPET MILLS PTY. LTD.

Nylon 6 Thomastown, Victoria *Unilon* (yarn)

Polyester Thomastown (yarn)

In addition to the above, VILENE AUSTRALIA reportedly produces spunbonded products at Minto, N.S.W.; these are believed to be principally based on cellulosic fiber, but some polypropylene may be used.

OLEFIN FIBER

AMOCO FABRICS COMPANY, PATCHOGUE PLYMOUTH DIVISION

Liverpool, N.S.W. *Poly Bac, Propex* (P film)

SARLON INDUSTRIES PTY. LTD. Punchbowl, N.S.W.

(E & P monofil & film)

The following companies produce olefin film fiber: A. ABRAHAMS & SONS PTY. LTD., Clayton, Victoria (*Koala, Polytex*); CORDEX INDUSTRIES PTY. LTD., Gladesville, N.S.W.; GEO. KINNEAR & SONS PTY. LTD., Footscray, Victoria (*Emu*); H. J. PENNO, Adelaide, South Australia; and TAPEX PTY. LTD., Sydney, N.S.W.

TEXTILE GLASS FIBER

AUSTRALIAN FIBREGLASS PTY. LIMITED

Dandenong, Victoria *A.C.I. Fibreglass*

AUSTRIA

AUSTRIA FASERWERKE G.m.b.H.

Polyester Lenzing *Trevira* (staple)

CHEMIEFASER LENZING A.G.•

Rayon Lenzing (staple)

Fluoro Lenzing (yarn & staple)

ERSTE ÖSTERREICHISCHE GLANZSTOFF-FABRIK A.G.

Rayon St. Pölten (ind & reg yarn)

OLEFIN FIBER

CHEMIE LINZ A.G. Linz *Asota, Linz-PP-Multifil, Linz-PP-Vlies*

(P yarn, staple & spunbonded)

The following companies produce olefin film fiber: CHEMIEFASER LENZING A.G., Lenzing; M. TEUFELBERGER, Wels; and SEUTTER, Unter Eggendorf.

BANGLADESH

ASHUGANJ PETROCHEMICAL COMPLEX

Acrylic Ashuganj* (staple)

KARNAPHULI RAYON AND CHEMICALS LIMITED

Rayon Chandraghona, Chittagong (reg yarn & staple*)

PYLON INDUSTRIES LIMITED

Nylon 6 Fouzdarhat Industrial Estate, Chittagong *Pylon* (yarn)

BELGIUM

AMCEL EUROPE, S.A.

Acetate Lanaken, Limburg (yarn)

Triacetate Lanaken (yarn)

N.V. BAYER S.A.

Nylon 6 Antwerpen - *Dorix* (staple)

BEAULIEU-NYLON S.A.•

Nylon 6 Kruishoutem, East Flanders (yarn)

FABELTA NINOVE S.A.

Rayon Ninove, East Flanders (reg yarn)

FABELTA TUBIZE S.A.

Acrylic Tubize, Brabant *Acribel* (staple)

FABELTA ZWIJNAARDE S.A.

Nylon 66 Zwijnaarde, East Flanders *Fabelnyl* (yarn)

Rayon Zwijnaarde (staple)

OLEFIN FIBER

DELOTEX (P staple)

N.V. FIBRILO Zele, East Flanders (P staple & film)

S.A. LA LOKEROISE Lokeren, East Flanders (P staple)

OSTEND STORES & ROPEWORKS S.A. Ostend, West Flanders

POLYFIL N.V. (subsidiary of Beaulieu) Wielsbeke (P yarn)

CHINA, PEOPLE'S REPUBLIC OF (MAINLAND)

Reliable information on locations of man-made fiber plants in the People's Republic of China is not available.

Rayon plants have been reported at Amoy, Antung, Canton, Foshan, Kirin, Nanchang, Nanking, Paoting and Shanghai. However, only the plants at Antung and Shanghai can be confirmed.

Non-cellulosic plants are reported at Canton (vinyon), Chungking (vinyon), Foochow (vinyon), Liaoyang (nylon & polyester), Lanchow (olefin & vinal), Peking (nylon, polyester & vinal), Pingtingshan (nylon), Shanghai (acrylic, polyester & vinyon), Shengli (vinyon), Shenyang (nylon & polyester) and Tientsin (polyester & vinyon). Others have been reported at Chenchiang, Harbin (acrylic), Hsinhsiang, Paoting (nylon), Sian and Sining (vinyon).

The following three plants have been reported as producing textile glass fiber: Shanghai Glass Fiber Plant, Shanghai Tungfanghung Glass Fiber Plant and Tientsin Glass Fiber Plant.

The incomplete and perhaps inaccurate plant listings shown on page 93 of the June 1971 issue are not repeated here.

Rayon plants have been reported at Balakovo, Barnaul, Cherkassy (Ukraine), Kalinin, Kamensk, Kiev, Klin, Krasnoyarsk, Leningrad, Mogilev, Ryazan, Saratov, Sokol, Sverdlovsk and Svetlogorsk.

Acetate plants have been reported at Engels, Fergana, Kaunas, Kirovakan and Moscow.

Nylon plants are reported at Barnaul, Chernigov, Daughavpils, Engels, Grodno, Kemerovo, Kiev, Klin, Kursk, Leningrad, Rustavi, Shchekino and Zhitomer.

Other non-cellulosic fiber plants are located at Kustanay (vinyon), Minsk (polyester), Mogilev (polyester), Navoi, Polotsk (acrylic+modacrylic) and Saratov.

Textile glass fiber plants are reported at Astrakhan Kalinin, Khabarovsk, Leningrad, Mingechaur, Moscow, Polotsk, Salavat, Saratov, Sevan and Severodonetsk.

LAWRENCE HOSE COMPANY (a Consolidated Foods Company) Burlington, NC (E monofil - captive)

LORETEX, DIVISION OF OIVIND LORENTZEN, INC. Guilderland Center, NY (E film - captive)

MONTAIR CORPORATION - see Wellington Puritan Mills

NSI, INC. Soperton, GA (P film - captive)

NEWTON FILAMENTS, INC. (an Albany International Company) Homer, NY (E & P monofil)

THE OSTERNECK COMPANY Lumberton, NC (P film)

PHILLIPS FIBERS CORPORATION (subsidiary of Phillips Petroleum Company) Rocky Mount, NC & Spartanburg, SC *Marvess* (P yarn, staple & tow)

SHUFORD MILLS, INC. Hickory, NC (P film)

SUNSHINE CORDAGE CORPORATION Miami, FL *Cala-Line, Oletex, Poncar, Sunshine, Sunylon, Sunypool* (E & P monofil)

SYNTHETIC INDUSTRIES (includes former Plant Industries [Texas] Inc., facilities) Chickamauga, GA & Houston, TX (P film - captive)

TUBBS CORDAGE COMPANY Orange, CA *Loktite* (P monofil & film) Also see Jackson Rope Company

TWINE PRODUCTS CORPORATION New Orleans, LA (P film)

UNITED STATES ROPE COMPANY Menlo Park, CA (P monofil)

WALL INDUSTRIES, INC. Beverly, NJ (E & P monofil)

WALTRICH PLASTIC CORPORATION Tennent, NJ (P monofil)

WAYN-TEX, INC. Waynesboro, VA *Beamette, Waynfil* (E & P yarn & monofil & P film)

WELLINGTON PURITAN MILLS (MONTAIR DIV.) (formerly Montair Corporation) Pilot Mountain, NC *Welltite, Pur-Ty* (E & P monofil and film)

WELLINGTON SYNTHETIC FIBRES, INC.
PLASTIC WOVEN PRODUCTS DIVISION
Leesville & Summerville, SC (P yarn, E & P monofil)

The following companies are also producing a variety of textile products from olefin: CONWED CORP. *Conwed Plastic Netting* (P embossed film for netting); E. I. DU PONT DE NEMOURS & COMPANY (INC.) (E & P embossed film for netting); HERCULES INCORPORATED, POLYMERS DIVISION *Delnet* (E embossed film for netting); NALLE INC. (P embossed film for netting); RIEGEL PRODUCTS CORPORATION *Polyweb* (P meltblown); and THE 3M COMPANY (P spunbonded).

TEXTILE GLASS FIBER

CERTAINTEED CORPORATION,
FIBERGLASS REINFORCEMENTS DIVISION
Wichita Falls, TX (roving, woven roving, mat, chopped strand & combination product)

JOHNS-MANVILLE SALES CORPORATION, FILTRATION & MINERALS DIVISION Waterville, OH & Etowah, TN *Chop-Pak* (chopped strand)

LUNDY TECHNICAL CENTER
Pompano Beach, FL *RoMHOglas* (metallized glass fiber roving, strand & mat)

NICOFIBERS INC.
Shawnee, OH *Conformat, Consurmat, Surmat* (mat)

OWENS-CORNING FIBERGLAS CORPORATION
Huntingdon, PA, Ashton, RI, Aiken & Anderson, SC, Jackson, TN and Amarillo, TX *Activa, Araton, Beta, Bi-Ply, Fiberglas, S-Glass, S-2 Glass* (yarn, roving, spun roving, woven roving, mat, chopped strand, milled and staple yarn & sliver)

PPG INDUSTRIES, INC., FIBER GLASS DIVISION
Lexington & Shelby, NC *Azdel* (yarn, roving, woven roving, mat, chopped strand & rubber reinforcements)

REICHHOLD CHEMICALS, INC.
CHEMGLASS DIVISION Irwindale, CA *Chemglass* (roving)
FIBERGLASS DIVISION Nashville, TN (roving, woven roving, mat, chopped & milled)
GLASS FIBER DIVISION Bremen, OH *Modiglass* (mat)

WORLD MAN-MADE FIBER PRODUCER AFFILIATIONS & PERCENTAGE OF CAPITAL OWNERSHIP

Licensing and royalty agreements are ot taken into account. The ownership of companies other than man-made fiber producers is not listed, e.g., weaving mills, chemical producers, etc.

For each country, the percentage following the first-named producer is the portion owned by the captioned company; the remainder of the entry shows other ownership. For example, Akzo N.V. owns 25% of Cyanenka of Spain, while American Cyanamid owns 40% and La Seda de Barcelona owns 35%. Also note that Akzo owns 57% of La Seda de Barcelona.

AKZO N.V. (NETHERLANDS)

Argentina	Petroquimica Sudamerica 40%
Austria	Erste Österreichische Glanzstoff-Fabrik 93%
Brazil	Companhia Bahiana de Fibras 45%; others 55%

a. Year totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February 1981 issue for annual data.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February 1981 issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February 1981 issue for annual data.

Textile ORGANON

FEATURING MAN-MADE FIBERS

VOL. LII • NO. 7

JULY
1981

MONTHLY REVIEW

CURRENT U.S. MAN-MADE FIBER PRODUCING CAPACITY (MILLION POUNDS PER YEAR) AT 11,857 IS EXPECTED TO INCREASE 5½% TO 12,497 BY MAY 1983. THE LATTER TOTAL WILL BE COMPRISED OF 908 CELLULOSIC FIBERS, 9,962 NON-CELLULOSIC FIBERS AND 1,627 TEXTILE GLASS FIBERS.
PG 125

A REVIEW OF WORLD MAN-MADE FIBER DATA IN MILLION POUNDS IS PRESENTED. DATA ARE SHOWN ON PRODUCTION, CAPACITY, IMPORTS AND EXPORTS.
PGS 115-124

FIRST HALF 1981 NON-CELLULOSIC FIBER SHIPMENTS INCREASE 6%

Non-cellulosic fiber shipments (except saran and spandex) totaled 4,163.6 million pounds for the first six months of 1981, an increase of 6% over the 3,935.4 million pounds delivered during the corresponding 1980 period. First half shipments of olefin+vinyon staple+tow, at 68.1 million pounds, were at record levels.

Non-cellulosic yarn+monofilament shipments (except saran and spandex) for the January-June 1981 period totaled 1,987.8 million pounds, an increase of 4½% over the 1,903.7 million pounds delivered during the corresponding 1980 period. Nylon yarn shipments increased 1% to 842.4 million pounds, polyester yarn shipments increased 7½% to 811.7 million pounds and olefin yarn shipments increased 7% to 333.7 million pounds during the first half of 1981 as compared with the same 1980 period.

Non-cellulosic staple+tow+fiberfill shipments for the first six months of 1981 totaled 2,175.8 million pounds, 7% above the 2,031.7 million pounds shipped during the corresponding 1980 period. Compared with first half 1980 shipments, nylon staple+tow increased 36% to 436.1 million pounds, acrylic+modacrylic staple +tow decreased 9½%, polyester staple+tow+fiberfill increased 4½% and olefin+vinyon staple+tow increased 19% during first half 1981.

JUNE AND MAY SHIPMENTS COMPARED

Following is a comparison of total June shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with May (million pounds), and the percentage change, respectively: nylon industrial 34.3 & 32.3 & +6%; low denier industrial 3.3 & 2.3 & +43%; carpet 61.3 & 65.3 & -6%; textile 37.3 & 36.1 & +3½%; polyester industrial 25.4 & 24.7 & +3%; low denier industrial 2.5 & 2.7 & -7½%; textile 108.6 & 106.4 & +2% and the total of these fibers 326.5 & 325.9 & unchanged.

For non-cellulosic staple+tow+fiberfill, the corresponding data are: nylon 69.2 & 74.8 & -7½%; acrylic+modacrylic 60.1 & 61.9 & -3%; polyester 213.2 & 220.0 & -3%; olefin+vinyon 11.7 & 12.4 & -5½% and the total 354.2 & 369.1 & -4%.

CELLULOSIC SHIPMENTS DECLINE 6% DURING FIRST HALF 1981

Deliveries of acetate yarn+monofilaments and rayon staple+tow for the first six months of 1981 totaled 376.6 million pounds, a decline of 6% from the 399.9 million pounds shipped during the first half of 1980. Shipments of acetate yarn+monofilaments declined 12% to 142.7 million pounds and rayon staple+tow deliveries declined 2% to 233.9 million pounds for the first six months of 1981.

June deliveries of acetate yarn+monofilaments declined 4½% to 25.2 million pounds from May shipments of 26.4 million pounds. For rayon staple+tow, the June-to-May decline was 8%, to 37.5 million pounds from 40.8 million pounds.

U.S. MILL CONSUMPTION DECLINED 1½% DURING JANUARY-JUNE 1981

Preliminary estimates of the Textile Economics Bureau put U.S. mill consumption at 5,630 million pounds for the first half of 1981. This is a 1½% decline from the January-June 1980 figure of 5,708 million pounds. A breakdown of these figures between man-made, cotton and wool shows that man-made and wool increased whereas cotton declined, as the following table shows.

	1st HALF 1981	1st HALF 1980	% CHANGE
Man-Made	4,150	4,025	+3%
Cotton	1,405	1,610	-13%
Wool	75	73	+2½%
TOTAL	**5,630**	**5,708**	-1½%

Thus, man-made fibers' share of U.S. mill consumption was 74% for the first half of 1981 as compared with 71% during the first half of 1980. For cotton, the comparable figures are 25% and 28% respectively, the other 1% being wool.

T.E.B. RELOCATED

Textile Economics Bureau, Inc., publisher of the ORGANON, this month moved to new quarters at 101 Eisenhower Parkway, Roseland, NJ 07068. The new telephone number is (201) 228-1107.

Concurrent with the move, there have been some changes in the T.E.B. staff.

Michael R. Kemp has been named managing editor of the ORGANON and editor of the Man-Made Fiber Review, a new monthly scheduled for publication in September.

Robert P. Antoshak, a recent addition to the staff, succeeds analyst David P. Harrison, who has gone with INDA in the capacity of manager of membership promotion.

Rosemarie D. Frick has been named head statistician and Dorothy A. Driscoll will continue as circulation manager of all T.E.B. publications.

Colin L. Robinson joined T.E.B. in June as a compositor, succeeding Lillian Medwed. Mrs. Medwed retired at the end of June after more than 30 years' service with the Bureau.

WORLD DATA IN MILLION POUNDS

The tables on pages 115-124 of this issue show data in million pounds for the tables on pages 81, 83-88, 91 and 92 of the June 1981 ORGANON issue.

Certain corrections for Greece, Hungary and Spain (see below) have been carried through in these tables.

JUNE ORGANON CORRECTIONS

Greece. On page 87, 1980 rayon yarn production should read 7.2 and the 1982 rayon yarn capacity should be 8.5

Hungary. On page 84, 1980 non-cellulosic yarn and staple should read 3.7 and 13.8, respectively.

Spain. On page 84, 1980 non-cellulosic yarn and staple and 1981 and 1982 capacities should be 64.9 & 142.5, 105.3 & 205.8 and 106.3 & 207.0, respectively.

TEXTILE, CARPET & INDUSTRIAL YARN

Viable information allows us to present the following breakdown of West European production of nylon and polyester yarn for 1978, 1979 and 1980 (million pounds):

	NYLON			POLYESTER		
	1978	1979	1980	1978	1979	1980
Textile	694	721	649	737	752	629
Carpet	333	313	290	--	--	--
Industrial	220	225	202	130	145	142
TOTAL	**1247**	**1259**	**1141**	**867**	**897**	**771**

Comparative U.S. data for the three years are as follows (million pounds):

	NYLON			POLYESTER		
	1978	1979	1980	1978	1979	1980
Textile	503	527	466	1209	1343	1176
Carpet	713	755	728	--	--	--
Industrial	438	499	437	355	373	286
TOTAL	**1654**	**1781**	**1631**	**1564**	**1716**	**1462**

IMPORTS, EXPORTS & BALANCE

The by-country production, import, export and net available or retained supply of four categories of man-made fiber are tabulated on page 123 covering calendar 1980.

In the page 123 table , "yarn" includes tire cord and tire cord fabric, filament yarn and monofilaments.

(Continued on page 124)

The silk and man-made fiber data are on a calendar-year basis, while the figures for cotton and wool are on a seasonal basis.

MAN-MADE FIBERS: Data are from pages 118 and 120, as noted. Textile glass fiber and olefin production on pages 118 and 124 respectively are not included.

COTTON: International Cotton Advisory Committee. Also see October 1980 ORGANON.

WOOL: Commonwealth Secretariat. The data are on a scoured basis. Also see the December 1980 ORGANON issue.

SILK: International Silk Association; Food and Agriculture Organization of the United Nations.

Y means yarn+monofilaments. **S** means staple+tow+fiberfill. **TOT** means total.

The producing capacity, in operable condition, is shown on an annual basis as of March 1981 (1981) and December 1982 (1982).

These totals do not contain data for the fibers produced in North Korea.

a. Benelux includes Belgium, Netherlands and Luxembourg.

Textile glass fiber is defined on page 93 of the June ORGANON. The textile glass fiber producing capacity, in operable condition, is shown on an annual rate basis as of March 1981 (1981) and December 1982 (1982).

a. The data for East Europe do not include estimates for the U.S.S.R.

b. The Other Africa, Asia & Oceania countries are Australia, India and South Africa.

Y means yarn+monofilaments. **S** means staple+tow. **TOT** means total.

The producing capacity, in operable condition, is shown on an annual basis as of March 1981 (1981) and December 1982 (1982).

These totals do not include data for the Indonesian pilot plant nor production of cellulosic fibers in North Korea.

Production and producing capacity by country, divided between rayon and acetate yarn, is given on page 121. Also note page 118 for data on production of acetate staple and cigarette tow.

Y means yarn+monofilaments. **S** means staple+tow+fiberfill. The regional totals here are the same as those on pages 116-118.

a. Other fibers are alginate, azlon, spandex or elastomer, saran, TFE-fluorocarbon, vinal and vinyon.

The olefin data shown comprise (a) the poundages of yarn, monofilaments and staple plus film fiber reported by official sources, such as governments, trade associations or other statistical agents plus (b) estimates of the additional poundages of olefin fiber not included in the aforementioned data. Note text on page 82 of the June ORGANON.

No attempt is made to strike a world total inasmuch as data are incomplete for a number of countries, particularly in Latin America, East Europe and Other Africa, Asia & Oceania.

(Continued from page 115)

Staple includes tow, fiberfill, tops and advanced waste. Unprocessed waste is not included.

In a few cases where a country's import or export data could not be accurately separated as rayon+acetate vs. non-cellulosic fiber, a division was estimated.

Except for spun yarn imports and exports, imports and exports of manufactured and semimanufactured man-made fiber products (e.g., fabric dresses, hosiery, etc.) are not included in the data.

The tables show the net import-export poundage of spun yarn under the "Total Man-Made Fiber" columns; space does not permit the presentation of the import and export data separately.

U.S. MAN-MADE FIBER PRODUCING CAPACITY

As of the end of May, the U.S. man-made fiber producing industry had the capacity to produce 11,857 million pounds of fiber per year. This is the second consecutive decline in fiber capacity. Thus May 1981 capacity is 1½% lower than the November 1980 capacity of 12,029 million pounds.

By May 1983, total man-made fiber producing capacity is expected to expand by 5½% to 12,497 million pounds annually. Non-cellulosic fiber capacity is expected to increase by 5% to 9,962 million pounds over the 2-year span, while textile glass fiber capacity is projected to grow by 13% to 1,627 million pounds. The cellulosic fibers remain unchanged at 908 million pounds over this 2-year period.

NON-CELLULOSIC PRODUCING CAPACITY

As of the end of May 1981, the U.S. fiber industry had the capability to produce 9,509 million pounds of non-cellulosic fibers, a decline of 1½% from its November 1980 capacity of 9,647 million pounds. The capacity is projected to increase by 5% to 9,962 as of May 1983.

Non-cellulosic yarn+monofilament capacity currently stands at 4,748 million pounds and is expected to increase by 3½% to 4,921 million pounds by May 1983. Over this 2-year period, nylon yarn is projected to increase by 4½% to 2,038 million pounds, polyester yarn to decrease by 2% to 1,805 million pounds, olefin to increase by 13% to 1,058 million pounds and saran and spandex to remain unchanged at 20 million pounds.

Non-cellulosic staple+tow+fiberfill capacity, as of the end of May 1981, is 4,761 million pounds and is projected to grow by 6% to 5,041 million pounds by May 1983. Following is the May 1981 and May 1983 capacity (million pounds) and the percentage change, respectively, for non-cellulosic staple+tow+fiberfill: nylon 970 & 1,072 & +11%; acrylic+modacrylic 830 & 857 & +3½%;

a. The non-cellulosic fibers included are those listed in the September ORGANON issues each year. Yarn+mono includes olefin film fiber and spunbonded polypropylene. Staple +tow includes fiberfill.

b. The acetate production and producing capacity data include diacetate and triacetate. The acetate staple+tow data do not include the large poundages for cigarette filtration.

c. Textile glass fiber, all types.

d. Grand Total Yarn means the yarn+mono shown **plus** all textile glass fiber.

e. Actual producing capacity as of the date shown.

f. Future producing capacity planned for certain dates as of May 1981.

IND means industrial yarn and monofil, i.e., 500 denier & coarser, with an Instron tenacity of 7 grams per denier or more; CARP means bulked continuous filament yarn for carpets; TEXTILE means yarn & monofil for other (textile) applications. Low denier industrial yarn is tabulated here also.

g. Olefin includes polyethylene & polypropylene. Not included here are data on spunbonded polyethylene, monofilament bristles, film fiber used for decorative or tying ribbons, etc.

h. Olefin monofil includes the circular and rectangular (ribbon) cross sections plus spunbonded polypropylene. Olefin film fiber includes slit and split or fibrillated fiber.

i. Other yarn & monofil is chiefly saran and spandex. Aramid data are included with nylon.

(Continued from page 124)

polyester 2,716 & 2,822 & +4% and olefin+ vinyon 245 & 290 & +18%

SURVEY COVERAGE & DEFINITIONS

The survey figures shown in the upper section of the table on page 125 cover the man-made fibers in all their primary forms, i.e.. filament yarn, monofilaments, polypropylene spunbonded and film fiber are tabulated as filament yarn+monofil, while staple, tow and fiberfill are tabulated as staple+tow. The glass fiber data cover all primary forms of that fiber (yarn and strand, staple yarn and sliver, roving and cake, chopped and milled fiber and mat). The "capacity" to produce waste is not included in the survey data.

Capacity is based on the current and projected "mix" of deniers, filament counts, packages, etc. It is emphasized that all figures refer to current and planned capacity. They are not a production forecast.

Under the survey definitions, all productive equipment which is currently, or is projected to be, in operable condition is counted as capacity, regardless of whether it is actually producing fiber at the time the capacity measurement is taken. On the other hand, equipment which is definitely scheduled for scrapping, or which has been scrapped since the last survey, is excluded from the capacity tabulation. Thus, the capacity data reflect operable, rather than operating, capacity.

a. Year to date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 13 of the February issue.

e. Data for nylon includes aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 13 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 13 of the February issue.

Textile ORGANON
FEATURING MAN-MADE FIBERS

VOL. LII • NO. 8

AUGUST
1981

MONTHLY REVIEW

APRIL-JUNE PRODUCTION OF MAN-MADE FIBERS (EXCEPT RAYON YARN, ACETATE STAPLE, SARAN & SPANDEX) WAS 4% ABOVE FIRST QUARTER OUTPUT.

THE RESPECTIVE SECOND AND FIRST QUARTER 1981 PRODUCTION (MILLION POUNDS) AND PERCENT CHANGE FOLLOWS: RAYON STAPLE 114.1 & 116.3 & -2%; ACETATE YARN 75.0 & 61.4 & +22%; NON-CELLULOSIC FIBERS 2,127.1 & 2,062.2 & +3% AND TEXTILE GLASS FIBER 260.2 & 237.1 & +9½%. PG 131

NON-CELLULOSIC SHIPMENTS DECLINE 5% IN JULY

July shipments of non-cellulosic fibers (except saran and spandex) totaled 643.5 million pounds, a 5% decrease from the 677.7 million pounds delivered in June but 14% above July 1980 shipments of 565.7 million pounds. However, for the first seven months of 1981, shipments totaled 4,804.3 million pounds, an increase of 6½% over the 4,501.1 million pounds shipped during the corresponding 1980 period.

Non-cellulosic yarn+monofilament deliveries for July (except saran and spandex) were 306.1 million pounds, 5% less than the 324.8 million pounds shipped in June but 13% more than the 270.1 million pounds delivered during July last year. For the January-July period, however, 1981 shipments, at 2,293.8 million pounds, were 5½% above 1980 deliveries.

Shipments of non-cellulosic staple+tow for July totaled 337.4 million pounds, 4½% less than June deliveries but 14% more than the 295.6 million pounds shipped during July 1980. For the year to date, shipments totaled 2,510.5 million pounds, 8% above the 2,327.3 million pounds delivered during January-July 1980.

JULY AND JUNE SHIPMENTS COMPARED

Following is a comparison of total July shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with June (million pounds) and the percentage change, respectively: nylon industrial 31.5 & 34.3 & -8%; low denier industrial 2.5 & 3.3 & -24%; carpet 55.9 & 61.3 & -9%; textile 31.7 & 37.3 & -15%; polyester industrial 26.9 & 25.5 & +5½%; low denier industrial 2.5 & 2.5 & unchanged; textile 102.1 & 108.6 & -6%; olefin 53.0 & 52.0 & +2% and the total of these fibers 306.1 & 324.8 & -5%.

For non-cellulosic staple+tow+fiberfill, the corresponding data are: nylon 62.2 & 69.2 & -10%; acrylic+modacrylic 51.7 & 60.1 & -14%; polyester 212.8 & 211.9 & +½%: olefin+vinyon 10.7 & 11.7 & -8½% and the total 337.4 & 352.9 & -4½%.

CELLULOSIC SHIPMENTS INCREASE 2% IN JULY

July shipments of acetate yarn and rayon staple+tow totaled 64.0 million pounds, an increase of 2% over the 62.7 million pounds delivered in June, but were 12% above the 57.1 million pounds shipped during July 1980. January-July deliveries, at 440.6 million pounds, were 3½% less than the 457.0 million pounds shipped during the corresponding 1980 period.

July deliveries of acetate yarn+monofilaments declined 2½% to 24.6 million pounds from June shipments of 25.2 million pounds and deliveries for the first seven months of 1981 were 10% less than the corresponding 1980 period. For rayon staple+tow, July shipments

BEST AVAILABLE COPY

increased 5% to 39.4 million pounds from June, and January-July 1981 deliveries were 1% above the same 1980 period.

END-OF-MONTH STOCKS INCREASE 8½%

Stocks of non-cellulosic fibers (except saran and spandex), as of July 31st, stood at 657.0 million pounds, an increase of 8½% over June's ending stocks of 604.8 million pounds. Based on July shipment levels of 643.5 million pounds, this represents just over a month's supply. The biggest increases occurred in nylon carpet yarn, which increased 21% to 47.9 million pounds and nylon staple+tow (used mainly in carpets), which increased 26% to 61.0 million pounds. Polyester textile yarn stocks increased 18% to stand at 89.4 million pounds as of the end of July.

JULY COTTON CONSUMPTION LOWEST SINCE JULY 1935

U.S. domestic cotton consumption in July, at 191.1 million pounds (preliminary), was the lowest monthly total since July 1935 when 190.5 million pounds were consumed. The July 1981 consumption figure was slightly below the 192.1 million pounds consumed in July 1978. January-July 1981 cotton consumption totaled 1,595.8 million pounds, 12% less than that consumed during the corresponding 1980 period.

U.S. COTTON CROP ESTIMATE

Based on conditions as of August first, the Crop Reporting Board estimated the 1981 (season 1981-1982) cotton crop at 14,789,300 bales of 480 pounds net weight. This would be 3,667,200 bales, or 33% more than last year's crop of 11,122,100 bales and 2,473,900 bales larger than the average outturn of 12,315,400 bales for the preceding five years. The cotton acreage for harvest was estimated to be 14,305,500 acres as against 13,214,800 acres in 1980 and an average of 12,519,400 acres for the 5-year period from 1976 through 1980. The estimated yield of 515 pounds per acre compares with 404 pounds per acre last year and an average of 472 pounds per acre in the past five years.

NEW ORGANON FORMAT

The ORGANON will have a new look commencing with the September issue. The new format is part of a continuing effort to identify the family of publications of the Textile Economics Bureau, Inc., including the new "Man-Made Fiber Review" and the "Man-Made Fiber Producers' Handbook."

CONTENTS

Monthly Review 129
  U.S. Cotton Crop Estimate 130

Textile ORGANON

CHARLES A. WHITEHEAD, *EDITOR & PUBLISHER*
MICHAEL R. KEMP, *MANAGING EDITOR*
DOROTHY A. DRISCOLL, *CIRCULATION MGR.*

PUBLISHED BY
TEXTILE ECONOMICS BUREAU, INC.
101 EISENHOWER PARKWAY, ROSELAND, NJ 07068

An arrangement of authentic market data, especially important to the United States Man-Made Fiber industry, published monthly in the interest of good business.

Copyright 1981 by Textile Economics Bureau, Inc. All rights reserved. This booklet may be reproduced in part if credit is given.

Subscription rates as of July 1981 (payable in U.S. dollars or equivalent, with order):

	U.S.A.	OTHER
Annually (1 yr. only)	$125.00	$187.50
Schools & Non-Profit	25.00	25.00
Single Issues:		
June	12.50	18.75
November	12.50	18.75
All Others	10.00	15.00

All issues will be sent to U.S. subscribers by first class mail and those to all other countries by airmail.

Although its logo and typeface will be changing, the general content of the ORGANON will continue. We will strive to bring you the latest statistical information on the man-made fiber industry, both at home and abroad.

"MAN-MADE FIBER REVIEW" DEBUT IN SEPTEMBER

A new publication of the Textile Economics Bureau, Inc., will make its debut in September.

Designed to provide up-to-the-minute coverage of the U.S. man-made fiber industry, the new monthly will be published on or about the 17th of each month and feature the monthly data familiar to subscribers of the "Man-Made Fiber Producers' Handbook."

The four-page publication will present more detailed information than generally found in the ORGANON's familiar "back page." This will include monthly data on production, exports, domestic shipments by denier, etc.

The annual subscription rate is $250.

ORGANON readers are invited to request a copy of the Preview Issue at no charge.

BOOK REVIEW

ILLUSTRATED GUIDE TO TEXTILES

Marjory L. Joseph and Audrey Gieseking-Williams. Burgess Publishing Company, 7108 Ohms Lane, Minneapolis, MN 55435, 160 pages. 1981. $10.95.

As a supplement to any basic textiles text, this manual is designed to aid students in an understanding of the numerous textile products available on the consumer market.

Divided into six chapters, the first introduces the five basic components of the textile manufacturing process: fibers, yarns, fabric structure, coloring procedures and finishing techniques. Each of the ensuing chapters offers an overview of one of the specific components. Included are exercises for the examination of actual fabric samples.

The manual offers an opportunity for students to utilize a framework for the study and evaluation of textiles, their applications and characteristics.

Included is a rather extensive bibliography of textile textbooks published in the U.S. over the past 45 years.

SECOND QUARTER PRODUCTION INCREASES 4%

Production of man-made fibers (except acetate staple+tow and rayon, saran & spandex yarn+monofilaments) totaled 2,576.4 million pounds in the April-June quarter this year, an increase of 99.4 million pounds or 4% above the 2,477.0 million pounds produced during the first quarter of 1981. Second quarter 1981 output was 327.6 million pounds, or 15% above the 2,248.8 million pounds produced during the second quarter of 1980. April-June production of non-cellulosic staple+tow (1,116.0 million pounds) and olefin+vinyon staple+tow (35.1 million pounds) were at new record high levels.

Non-cellulosic yarn+monofilament production (except saran and spandex) totaled 1,011.1 million pounds during the second quarter, 3½% above first quarter output of 979.2 million pounds and 14% above that produced during the corresponding 1980 quarter. April-June 1981 output of non-cellulosic staple+tow was a record 1,116.0 million pounds, 3% above first quarter 1981 and 19% above the 939.5 million pounds produced during the second quarter of 1980. Nylon+aramid yarn+monofilaments and acrylic+modacrylic staple+tow were the only non-cellulosic fibers to show a production decline between first and second quarter 1981.

Second quarter 1981 production of acetate yarn+monofilaments totaled 75.0 million pounds, 22% above the previous quarter's level of 61.4 million pounds, but 8½% below the 82.1 million pounds produced during the April-June 1980 quarter. Rayon staple+tow production during the second quarter of 1981 declined 2% to 114.1 million pounds from the January-March level, but was ½% above the 113.4 million pounds produced during the corresponding 1980 quarter.

Output of textile glass fiber during the latest quarter totaled 260.2 million pounds, an increase of 9½% over first quarter 1981 production of 237.1 million pounds and 16% above the output level of the corresponding 1980 quarter.

SECOND QUARTER SHIPMENTS UP 7%

Shipments of man-made fibers (except acetate staple+tow and rayon, saran & spandex yarn+monofilaments) totaled 2,612.7 million pounds during the second quarter this year, an increase of 7% over the previous quarter's deliveries of 2,438.2 million pounds and 17% above the corresponding 1980 quarter.

April-June 1981 deliveries of non-cellulosic yarn+monofilaments (except saran and spandex) were 1,011.8 million pounds, 3½% more than the 975.9 million pounds shipped during the first quarter and 14% more than deliveries during the second quarter of 1980. Non-cellulosic staple+tow shipments during the latest quarter totaled a record 1,121.2 million pounds, 6½% more than first quarter 1981 and 17% above the same 1980 quarter.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" non-cellulosic yarns (chiefly saran & spandex) are available annually only; see pages 20 & 21 of the February ORGANON for further details on these yarns.

b. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

c. Yarn imports include singles and plied.

d. Acetate staple+tow data are available annually only; see pages 20 & 21 of the February ORGANON for further details.

e. These figures are composites of the nylon, acrylic+modacrylic, polyester and olefin staple imports, i.e., Commodity Numbers 309.4338, .4342, .4345 & .4346.

Second quarter 1981 shipments of acetate yarn+monofilaments totaled 78.7 million pounds, an increase of 23% over the previous quarter, but 2½% less than deliveries during the April-June quarter last year. Rayon staple+tow shipments during the latest quarter stood at 119.7 million pounds, 5% more than first quarter 1981 and 8½% above the corresponding 1980 quarter.

(Continued on page 134)

a. Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.

b. Small poundages of polyester are included in All Other.

c. Small poundages of olefin are included in All Other.

d. Small poundages of nylon and polyester are included in All Other.

e. Other Broad Woven except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e., industrial applications are in All Other.

f. Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.

g. Small poundages of olefin are included in All Other.

h. All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing. Also includes indirect exports starting 1st Quarter 1980.

i. These poundages are included in the Total Domestic area above.

Textile glass fiber deliveries during the April-June quarter of 1981 totaled a record 281.3 million pounds, an increase of 21% from first quarter shipments of 232.2 million pounds and 44% above second quarter 1980 deliveries of 195.0 million pounds.

SHIPMENTS BY PRIMARY TRADE OR END USE

by primary trade or major end use for the most recent periods.

Domestic shipments of filament yarn (except rayon, saran and spandex) totaled 1,008.6 million pounds during the latest quarter, an increase of 5½% from the previous quarter and 15% above the corresponding 1980 quarter. Significant increases in second quarter shipments were shown by acetate yarn deliveries to the flat knit trades (up 39% to 37.2 million pounds) and polyester yarn to the broad woven trades (up 34% to 138.4 million pounds). On the other hand, shipments of olefin to the rope and cordage industry declined 20% to 22.8 million pounds. Deliveries to the apparel and home furnishings industries increased during the latest quarter, whereas shipments to the industrial area declined.

Staple+tow shipments (except acetate) to the domestic industries increased 6% during the April-June 1981 quarter to 1,018.8 million pounds from the first quarter level. Second quarter 1981 deliveries were 14% above April-June 1980 shipments of 891.6 million pounds. Second quarter 1981 increases were registered by acrylic+modacrylic staple+tow to the hosiery, sweater

BROAD WOVEN FABRICS PRODUCTION

The broad woven fabrics production data shown in this issue of the ORGANON, as compiled from the U.S. Census Bureau's Current Industrial Report MQ-22T, are in millions of square yards, except for the Tire Cord & Tire Fabrics and Yarn Consumed tables, which continue to be shown in million pounds.

For the last two quarters of 1980, the fabric production data are shown in both linear *and* square yards in MQ-22T. But for 1981 and subsequent years, data are collected and published in square yards only to provide comparability between imports, exports and domestic output. Production in linear yards was last shown in the May 1981 ORGANON, pages 73-75.

a. For 1980 includes velvets only.

b. Felts are not included.

c. Includes polyester blanketing.

d. Includes filament & spun yarn fabrics.

e. 100% or chiefly man-made fibers; chief fiber not specified. Also includes upholstery & tapestry, and small poundages of silk, tie, twisted paper yarn and girdle & swimwear fabrics.

The aggregates published in this report have been compiled from a sample of approximately 650 respondents accounting for 95% of the total U.S. production of broad woven fabrics in 1977. The universe for this sample was the 1977 Census of Manufactures.

BROAD WOVEN GOODS PRODUCTION

First quarter 1981 production of broad woven fabrics totaled 3,975.1 million square yards, a decrease of 116.5 million square yards or 3% from the fourth quarter 1980 level of 4,091.6 million square yards. Woolen and worsted fabrics was the only category to show a quarter-to-quarter increase.

Cotton broad woven fabric production declined 7½% between fourth quarter 1980 and first quarter 1981 to 992.5 million square yards. The biggest declines were registered in print cloth fabrics (down 63.4 million square yards to 354.2 million square yards), corduroys (down 12.1 million square yards to 75.8 million square yards) and denims (down 2.9 million square yards to 146.1 million square yards). Production of sheeting & allied fabrics, drapery & bedspread fabrics and toweling all increased during the first quarter of 1981.

First quarter 1981 production of woolen & worsted fabrics increased 34% to 53.7 million square yards from the 40.0 million square yards produced the

See footnotes on opposite page.

previous quarter. All categories of woolen & worsted fabric production increased, except for nonapparel fabrics.

Man-made fiber production during the January-March 1981 quarter totaled 2,928.9 million square yards, a decline of 1½% from fourth quarter 1980 levels. All categories of filament yarn fabrics increased from their fourth quarter 1980 levels except for 100% nylon and others. For spun yarn fabrics the pattern was similar with only acrylic+modacrylic and others declining from their fourth quarter 1980 level. Specialty fabrics, except for silk and velvets, registered increases during the latest quarter.

YARNS CONSUMED IN BROAD WOVEN FABRIC MILLS

During the first quarter of 1981, broad woven fabric mills consumed 1,183.6 million pounds of yarn according to the U.S. Census Bureau, an increase of 1½% over fourth quarter 1980 consumption of 1,167.9 million pounds, but 4% below the level of a year ago.

Filament yarn consumption during the first quarter of 1981 totaled 381.8 million pounds, 4½% above the previous quarter and 8% above first quarter 1980 levels. All categories of filament yarn increased during the first quarter of 1981 as compared with fourth quarter 1980 and only nylon and textile glass filament yarn declined as compared with first quarter 1980.

January-March 1981 consumption of spun yarn, at 779.0 million pounds, though slightly above the 777.7 million pounds consumed the previous quarter, was 8½% below the 851.1 million pounds used during the first quarter of 1980. Consumption of 100% spun cotton yarns in the latest quarter, at 322.7 million pounds, declined 2½% from fourth quarter 1980 levels and was 12% below year-ago levels. Spun polyester/cotton yarn consumption in the first quarter of 1981 declined 1% to 330.3 million pounds from the fourth quarter 1980 level and was 8% below first quarter 1980 levels.

U.S. EXPORTS

Second quarter exports of man-made fibers totaled 385,143 thousand pounds, an increase of 6% over the 363,619 thousand pounds exported during the first quarter of 1981 and 7% above that exported during the second quarter of 1980. First half 1981 exports totaled 748,762 thousand pounds, an increase of 9½% over the 683,210 thousand pounds exported during the first six months of 1980.

Cellulosic yarn exports during the second quarter of 1981 decreased 28% to 6,013 thousand pounds from first quarter 1981, and were 4½% below the 6,297 thousand pounds exported during the corresponding 1980 quarter. Cellulosic staple+tow exports, at 16,280 thousand pounds, during the April-June 1981 period increased 2½% from the first quarter, but were 16% less than the 19,318 thousand pounds exported during

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census.

The man-made, cotton and wool manufactures data are from *Cotton and Wool Situation,* a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and non-cellulosic fibers only; textile glass fiber is excluded.

a. **E** means a net export balance; I is a net import balance.

b. Acetate tow is excluded.

c. The fibers included are shown as "Total Man-Made Fiber Above" on page 142 herewith.

d. Man-made fiber equivalent.

e. Raw cotton equivalent. Data are similar to those on page 37 of the March 1981 ORGANON issue.

f. Raw wool content. The data differ from those on page 37 of the March ORGANON issue to the extent that noils and waste are included here.

SOURCE: U.S. Census Bureau Report.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of non-cellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

11% over first quarter 1981 and 8½% over second quarter 1980 exports. Textile glass exports, at 8,611 thousand pounds for the second quarter of 1981, declined 15% from the previous quarter's level, and were 44% below the 15,511 thousand pounds exported during the same 1980 quarter.

a. Year to date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February issue.

Monthly Review

Highlights

August shipments of non-cellulosic fibers (except saran and spandex) increased 4½% over July shipments, to 673.3 million pounds. For the year to date, 1981 shipments, at 5,477.8 million pounds, are 6½% above deliveries for the corresponding 1980 period.

Our annual directory of U.S. man-made fiber producers details the fibers produced and their trademarks, as well as the plant, executive and sales office locations.

U.S. import-export data are presented from 1978 through mid-1981.

AUGUST SHIPMENTS INCREASE 4½%

Shipments of non-cellulosic fibers (except saran and spandex) totaled 673.3 million pounds during August, an increase of 4½% over July shipments of 643.7 million pounds. August deliveries of non-cellulosic yarn+monofilaments (except saran and spandex) were 316.5 million pounds, an increase of 3½% over July deliveries. For non-cellulosic staple+tow, August shipments rose 5½% from July levels to 356.8 million pounds.

For the first eight months of 1981, non-cellulosic fiber (except saran and spandex) shipments totaled 5,477.8 million pounds, an increase of 6½% over the 5,136.8 million pounds delivered during January-August 1980. Year-to-date shipments of non-cellulosic yarn+monofilaments (except saran and spandex) totaled 2,610.3 million pounds, 6% above the 2,467.5 million pounds shipped during the corresponding 1980 period. January-August deliveries of non-cellulosic staple+tow totaled 2,867.5 million pounds, a 7½% increase over the corresponding period a year ago.

AUGUST AND JULY SHIPMENTS COMPARED

Following is a comparison of total August shipments of non-cellulosic yarn+monofilaments (except saran and spandex) with July (million pounds), and the percentage change, respectively: nylon industrial yarn 36.5 & 31.5 & +16%; low denier industrial 2.9 & 2.5 & +16%; carpet 52.1 & 55.9 & -7%; textile 34.8 & 31.7 & +10%; polyester industrial yarn 27.3 & 26.9 & +1½%; low denier industrial 1.9 & 2.5 & -24%; textile 107.3 & 102.1 & +5%; olefin 53.7 & 53.0 & +1½% and the total of these fibers 316.5 & 306.1 & +3½%.

For non-cellulosic staple+tow, the corresponding data are: nylon 52.8 & 62.2 & -15%; acrylic+modacrylic 59.8 & 51.9 & +15%; polyester 232.9 & 212.8 & +9½%; olefin+vinyon 11.3 & 10.7 & +5½% and the total 356.8 & 337.6 & +5½%.

CELLULOSIC SHIPMENTS DECLINE 12%

August shipments of acetate yarn+monofilaments and rayon staple+tow totaled 56.8 million pounds, a decline of 12% from the 64.0 million pounds delivered during July. For the first eight months of this year, shipments totaled 497.4 million pounds, 3½% below the 515.9 million pounds delivered during the corresponding 1980 period.

Acetate yarn+monofilament deliveries during August totaled 19.9 million pounds, 19% below July shipments of 24.6 million pounds. January-August deliveries of 187.2 million pounds were 11% below those of the same 1980 period. August deliveries of rayon staple+tow declined 6½% from July levels to 36.9 million pounds. However, for the first eight months of this year, rayon staple+tow deliveries, at 310.2 million pounds, are 1½% above those of the corresponding 1980 period.

NEW ORGANON FORMAT

With this issue, the *Organon* puts on a whole new face: logo, typeface, paper and ink. We hope you like our new look and would welcome any comments you might have concerning the *Organon*, on both format and content.

MAN-MADE FIBER PRODUCERS' DIRECTORY

This ORGANON annual directory of U.S. man-made fiber producers, which updates and augments listings in the September 1980 and June 1981 issues, is presented on pages 147 et seq.

It will be noted that the current directory of producers separates the listings into (1) the cellulosic plus the non-cellulosic fibers (except olefin), (2) olefin fiber and (3) textile glass fiber.

The product arrangement follows the generic fiber nomenclature established by the U.S. Federal Trade Commission. See page 147 herewith for the FTC generic definitions.

The following generic names promulgated by the FTC do not appear in the directory: anidex, azlon, lastrile, nytril and vinal (not made in this country) and metallic, novoloid and rubber (no attempt is made to list these producers).

MULTIPLE-FIBER PRODUCERS

Five of the six rayon and/or acetate producers also are producers of non-cellulosic fibers. Thus American Enka also produces nylon, polyester and olefin (through Fibron). Avtex also produces polyester and vinyon. Celanese is the principle owner of Fiber Industries which also produces nylon, polyester and olefin. Courtaulds also produces modacrylic and polyester.

Of the producers making only the non-cellulosic fibers, 15 now produce, or will produce, more than one of these fibers. These multiproduct companies, and the total number of generic fiber types produced (shown in parentheses), are Albany International (4), Allied (2), Ametek (4), Badische (2), Berkley & Co. (2), Camac (2), Du Pont (7), Falk Fibers & Fabrics (2, including Hanover Mills and Universal Polymer Products), Firestone (2), Johnson Filaments (2), Monofilaments (3), Meyers (2), Monsanto (4), Shakespeare (2) and Wellman (2).

CAPTIVE FIBER PRODUCERS

Several olefin and nylon producers consume essentially all of their fiber output in products of their own manufacture such as rope, narrow fabric, industrial goods, etc., i.e., the fiber production is a captive operation. The word "captive" is shown to describe these producers in the directory; note the ninth paragraph of the definitions on page 147. Other producers consume lesser portions of their fiber production, e.g., note the subscripts to the listings for Badische Corporation (page 148) and Amoco Fabrics Company (page 149).

These captive fiber producers are listed here, and their output recorded in all *Organon* data surveys,

U.S. MAN-MADE FIBER PRODUCERS

ALBANY INTERNATIONAL · MONOFILAMENT PLANT●
(formerly Newton Filaments, Inc.)
EXECUTIVE OFFICE: 156 S. Main Street, Homer, NY 13077
Fluoropolymers Homer, NY *Halar, Kynar, Teflon, Tefzel* (monofil)
Nylon 6, 66, & 612 Homer (monofil)
Polyester Homer (monofil regular & hydrolysis resistant)

ALLIED FIBERS AND PLASTICS COMPANY
EXECUTIVE OFFICE: 1411 Broadway, New York, NY 10018
REGIONAL SALES: 400 N. Tustin Ave., Santa Ana, CA 92705
1775 The Exchange, Suite 160, Atlanta, GA 30339
2100 Fiber Park Dr., Dalton, GA 30720
Friendship Center Office Park, Suite 108, Greensboro, NC 27409
64 South Miller Rd., Akron, OH 44313
Nylon 6 Columbia, SC & Hopewell, VA *A.C.E., Anso, Anso X, Anso IV, Caprolan, Nypel* (yarn, monofil & staple)
Polyester Moncure, NC *A.C.E.* (yarn & monofil)

AMERICAN ENKA COMPANY●
A PART OF AKZONA, INC.
EXECUTIVE OFFICE: Enka, NC 28728
REGIONAL SALES: 1529 McFadden Ave., Santa Ana, CA 92705
530 Fifth Ave., New York, NY 10036
616 Green Valley Rd., Greensboro, NC 27404
Suite 524, Uptain Bldg., Chattanooga, TN 37411
Rayon Lowland, TN *Absorbit, Enkaire, Enkrome, Fiber 700, IT* (staple)
Nylon 6 Enka, NC, Central, SC & Lowland *Crepeset, Enka, Enkaloft, Enkalure, Enkasheer, Enkatron, Multisheer, Phase 7, Softalon, Zantrel* (yarn, monofil & staple)
Polyester Central & Lowland *Encron, Encron 8, Enka, Golden Glow, Golden Touch, Silky Touch, Strialine, Ultra Touch* (yarn & staple)

NOTES & DEFINITIONS FOR THE DIRECTORY

This directory separates the listing into (1) the cellulosic plus the non cellulosic fibers (except olefin), (2) olefin fiber and (3) textile glass fiber.

● means that the company produces olefin fiber as well as other man-made fiber(s). For example, Albany International produces olefin fiber (page 149) as well as nylon, polyester & fluoropolyester (see above).

Unless shown separately, the Head Sales Office address is the same as the Executive Office address.

* indicates that a new plant, or facilities for producing a new product at an existing plant, is in the planning or construction stage; such facilities are not expected to be operable before 1982 or later.

The localities shown are the plant sites.

Yarn means filament yarn. No attempt is made to identify high tenacity vs. textile tenacity, nor textured or BCF vs. regular, non cellulosic yarns.

Monofil means an extruded monofilament and may be either a round or a rectangular (ribbon) cross section.

Staple, **tow** and **fiberfill** are self explanatory.

Captive means that most or all of the fiber produced is consumed by the company in a vertical operation, i.e., little or none of the fiber is for sale as such.

In the olefin entries:

Film includes **Slit**: tape produced by slitting an already attenuated wide sheet of olefin film; and **Split**: fibrillated slit film.

Not included in the survey is the slit "fiber" used for decorative or tying ribbons and such.

Rope includes braided & twisted rope as well as filler or core fiber.

Cordage is under 3/16" and includes tying and harvest (baler & binder) twine.

Carpet Backing is self explanatory.

Industrial Goods means bags, bale wrap & protective covers, agricultural cloth, tarps & pool covers, etc.

GENERIC NAMES & TRADEMARKS

The generic fiber names used in this survey are mainly those promulgated by the U.S. Federal Trade Commission. Following are those generic names (in **bold type**) and a brief description of the fibers covered by each name.

The *italicized* words are trademarks. All other fiber names are generic and are shown in regular type.

CELLULOSIC (ARTIFICIAL) FIBERS

Acetate. Cellulose acetate. Cigarette filtration tow is excluded.

Triacetate. Cellulose acetate, wherein not less than 92% of the hydroxyl groups are acetylated.

Rayon. Regenerated cellulose, including substitutions for not more than 15% of the hydrogens of the hydroxyl groups. Includes high wet modulus fiber.

The viscose rayon yarns are identified as ind (industrial or high tenacity yarn) and reg (regular or textile yarn).

NON-CELLULOSIC (SYNTHETIC) FIBERS

Acrylic. At least 85% acrylonitrile by weight.

Modacrylic. 35% to 84% acrylonitrile by weight, except when it qualifies as rubber.

Nylon. A long chain synthetic polyamide in which less than 85% of the amide linkages are attached directly to two aromatic rings. The types are identified as 6, 66, etc.

Aramid. A long chain synthetic polyamide in which at least 85% of the amide linkages are attached directly to two aromatic rings.

Olefin. At least 85% ethylene, propylene or other olefin units by weight, except amorphous (noncrystalline) polyolefins qualifying as rubber. **E** means Polyethylene and **P** means Polypropylene. Also see adjoining notes on olefin fiber.

Polyester. At least 85% by weight of an ester of a substituted aromatic carboxylic acid, including but not restricted to substituted terephthalate units, and parasubstituted hydroxybenzoate units.

Saran. At least 80% vinylidene chloride by weight.

Spandex. At least 85% of segmented polyurethane.

Vinyon. At least 85% vinyl chloride by weight.

Not covered in this survey are fibers which would fall under the FTC's generic designations of rubber, metallic and novoloid. Fibers falling under the FTC designations of anidex, azlon, nytril and vinal are not produced in the United States.

TEXTILE GLASS FIBER

A fiber produced in two primary forms, namely continuous strand and staple sliver. Continuous strand is a drawn fiber (i.e., from a textile type bushing), while staple sliver, which is produced in relatively small amounts, in current practice is a blown fiber. Textile glass fiber thus ***does not*** include the substantial poundages of blown glass wool and pack, e.g., mat for air & liquid filtration, acoustical & thermal insulation, battery mats & separators and underground pipe wrap (except reinforcing).

Yarn & Strand means continuous filament yarn and strand packaged for sale as such. Includes the yarn and strand used in the manufacture of nonwoven scrim for sale as such.

Roving means two or more ends of untwisted strand. Includes spun strand roving (a single, continuous strand looped back on itself to give the equivalent of two or more strands) and roving for making woven roving.

Mat means mat in any nonwoven form as made from a continuous filament, i.e., continuous strand mat (filaments bonded with a suitable binder to form a membrane) and chopped strand mat (½" to 3" strands deposited in a random manner and resin bonded).

Chopped means chopped yarn, strand or roving (⅛" to 3 ¾" length).

Milled means hammer-milled yarn, strand or roving (1/32" to ¼" length).

Staple Yarn & Sliver is a blown fiber, as noted, and means ribbons of generally parallel glass staple (3" to 15" random lengths) with or without a filament yarn reinforcement, with or without a binder, and slightly condensed to an approximately uniform cross section.

AMERICAN CYANAMID COMPANY, FIBERS DIVISION
EXECUTIVE OFFICE: Wayne, NJ 07470
REGIONAL SALES: One Penn Plaza, New York, NY 10019
8309 Wilkinson Blvd., Charlotte, NC 28237
Acrylic Santa Rosa, FL *Creslan* (staple & tow)

AMERICAN HOECHST CORPORATION
EXECUTIVE OFFICE: 202-206 North, Somerville NJ 08876

HOECHST FIBERS INDUSTRIES DIVISION
EXECUTIVE OFFICE: 1515 Broadway, New York, NY 10036
REGIONAL SALES: 5821 Park Rd., Charlotte, NC 28209
California Mart, 110 E. 9th St., Los Angeles, CA 90015
Polyester Spartanburg, SC *Trevira* (yarn & staple);
Delaware City, DE (monofil)

AMETEK INC., SPECIAL FILAMENTS DIVISION•
EXECUTIVE OFFICE: Box 339, Odenton, MD 21113
Nylon 6, 66, 612 & 11 Odenton, MD (monofil)
Polyester Odenton (monofil)
Saran Odenton (monofil)

AVTEX FIBERS INC.
EXECUTIVE OFFICE: Building #9, Executive Mall, P.O. Box 880, Valley
Forge, PA 19482
SALES OFFICE: 1185 Avenue of the Americas, New York, NY 10036
REGIONAL SALES: 1 Fairview Plaza, 5950 Fairview Rd., Suite 501,
Acetate Meadville, PA (yarn) Charlotte, NC 28210
Rayon Front Royal, VA *Aviloc, Avril, Avril II, Avril III, Avril Prima, Fibers 40 & 43* (ind yarn & staple)
Polyester Lewistown, PA *Avlin* (yarn)
Vinyon Meadville (staple)

BADISCHE CORPORATION
EXECUTIVE OFFICE: Williamsburg, VA 23185
REGIONAL SALES: 5505 East Carson St., Lakewood, CA 90713
300 West Emory St., Emory Square Bldg., Dalton, GA 30720
111 West 40th St., New York, NY 10018
Acrylic Williamsburg, VA *Zefran* (staple)
Nylon 6 Anderson, SC *Zeftron* (yarn & staple)
Badische Corp. has carpet yarn spinning plants at Allendale, SC and Sylvania, GA.

BERKLEY & CO. INC.•
EXECUTIVE OFFICE: Highways 9 & 71, Spirit Lake, IA 51360
Nylon 6 Spirit Lake, IA (monofil)

CAMAC CORPORATION •
EXECUTIVE OFFICE: P.O. Box 1004, Bristol, VA 24201
Nylon 6 Bristol, VA *Camalon* (yarn)

CELANESE FIBERS COMPANY•
A DIVISION OF CELANESE CORPORATION
EXECUTIVE OFFICE: P.O. Box 32414, Charlotte, NC 28232
MARKETER: Celanese Fibers Marketing Company, P.O. Box 32414
Charlotte, NC 28232
REGIONAL SALES: 110 E. 9th St., Room A 1229, Los Angeles, CA 90015

Acetate includes triacetate; Acryl means acrylic & modacrylic; Nylon includes aramid.
Other non-cellulosic includes 1 fluorocarbon, 1 fluoropolymer, 1 polycarbonate, 1 saran, 3 spandex and 1 vinyon.

(Continued from page 146)

because their production is a part of the total man-made fiber supply.

CHANGES IN THE DIRECTORY

Compared with the September 1980 directory listings of company-plant-product, the following companies have been delisted from the directory: Milliken & Company at Laurens, SC (nylon 6), Sunburst Yarns, Inc., at Afton, VA (nylon 6) and Plant Industries (Texas) Inc. at Houston, TX (olefin).

Under **nylon,** the West Conshohocken, PA plant of Allied has been delisted. Du Pont's plant at Chattanooga, TN for *Qiana* has been delisted. Also delisted have been the nylon 66 plants for Fiber Industries at Shelby, NC and Greenville, SC and Monsanto's Decatur, AL plant. Wellman, Inc., has been listed as a producer of nylon 6, as well as 66, at Johnsonville, SC.

Under **polyester,** a new producer, Omega Yarn at Asheboro, NC (the old Texfi facility), has been added. Under Monsanto the listings for Decatur & Sand Mountain, AL and Fayetteville, NC have been deleted. Note that the Fayetteville listing has been added to the one for Fiber Industries.

Under **olefin,** three new companies have been added, i.e., Camac Corporation at Bristol, VA; Filament Fiber Technology Inc. at Lakewood, NJ and Sarlon Industries at Miami, FL. Vectra Corporation is no longer listed separately but as part of Chevron Fibers. The aforementioned Afton, VA plant (formerly Sunburst Yarns) has been added to the Amoco listing and the Houston, TX plant (formerly Plant Industries (Texas) Inc.) has been added to the Synthetic Industries listing.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census. The man-made, cotton and wool manufactures data are from *"Cotton and Wool Situation,"* a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and non-cellulosic fibers only; textile glass fiber is excluded.

[a] **E** means a net export balance; **I** is a net import balance.

[b] The fibers included are shown under "Total Man-Made Fiber Above" on pages 154 and 155 herewith.

[c] Man-made fiber equivalent.

[d] Raw cotton equivalent. Data are similar to those on page 37 of the March 1981 ORGANON.

[e] Raw wool content. The data differ from those on page 37 of the March 1981 ORGANON to the extent that noils and waste are included here.

SOURCE: U S Census Bureau

NES Not elsewhere specified.

NA Not available

* These items are not reported by the Census as cellulosic vs. non-cellulosic. Any separation between cellulosic and non-cellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

k. Included in other non-cellulosic textured singles below.

SOURCE: U.S. Census Bureau Report.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of non-cellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. This figure is an obvious misclassification. Most of this poundage should be included in filament yarn.

f. Included in filament yarn.

CELANESE TO SELL MOULTRIE PLANT

Celanese Fibers Company is currently negotiating the sale of its olefin plant at Moultrie, GA to Dominion Textiles of Canada. Dominion Textiles will continue to operate the facility and produce civil engineering fabrics.

Table continues on page 157 opposite

U.S. IMPORTS, EXPORTS & BALANCE

The table on page 153 is compiled from export and import data released by the U.S. Census Bureau and the Department of Agriculture. Much of the data is reported in units other than pounds (e.g., dollars, dozens, yards, etc.) and is then converted to a poundage basis by the USDA, using conversion factors that they have developed.

For the first six months of 1981, the United States had a man-made fiber export balance of 654,633 thousand pounds, an 8½% increase over the 603,241 thousand pound export balance accrued over the first six months of 1980. Annualized, this would result in an export balance of some 1.3 billion pounds as compared with 1.2 billion pounds in 1980.

However, the U.S. export balance of man-made fiber manufactures for the first six months of 1981,

totaling 65,208 million pounds, declined 48% from the first half 1980 export balance of 124,940 million pounds for these products. This decline resulted from a 13% increase in imports of manufactured products and a 6½% decrease in exports of these products during the first six months of 1981 as compared with the corresponding 1980 period. On an annual basis, this would result in a 1981 export balance of man-made fiber manufactures of some 130 million pounds. This compares with a 1980 export balance of 230.9 million pounds for man-made fiber manufactures.

Thus, the total export balance of man-made fiber and manufactures for the first half of 1981 totaled 719,841 thousand pounds, as compared with 728,181 thousand pounds for the first six months of 1980. On an annual basis, the U.S. export balance for man-made fiber and manufactures would total some 1.45 billion pounds, about the same as the 1980 total.

Imports of cotton manufactures for the first six months of 1981 totaled 468,532 thousand pounds, an increase of 13% over the corresponding 1980 period. For the first six months of 1981, exports of cotton manufactures declined 25% to 208,731 thousand pounds from the 280,720 thousand pounds exported during the first half of 1980. Thus, the import balance for cotton manufactures totaled 259,801 thousand pounds for the first six months of 1981. This is almost as high as the 287,836 thousand pound import balance for the ***year*** 1980 in total. On an annualized basis, an import balance of some 500 million pounds would be expected.

Imports of wool manufactures for the first half of 1981 totaled 52,755 thousand pounds, 6½% above the 49,596 imported during the corresponding 1980 period.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. non cellulosic. Any separation between cellulosic and non cellulosic is estimated, based mainly on average declared value.

[a] Also includes 310.0510 & .0610.

[b] Also includes 310.0530, .0550, .0630 & .0650.

[c] Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

[d] There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

[e] Also includes 310.1110 & .1114.

[f] Also includes 310.2010 & .2110.

[g] Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

[h] Also includes 310.5005 & .5030.

[i] Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

[j] Chiefly roving. Also includes 309.9800 & .9900.

WOOL & COTTON CONSUMPTION

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	1981	1980
APPAREL CLASS WOOL	11.0	12.1	14.6	13.2	11.5	12.9				75.3	74.5
CARPET CLASS WOOL	0.8	0.8	0.9	0.8	0.8	0.9				5.0	5.5
TOTAL RAW WOOL	11.8	12.9	15.5	14.0	12.3	13.8				80.3	80.0
RAW COTTON	217.4	245.4	247.1	238.1	220.8	236.1	193.1	224.4		1822.4	2038.3

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February issue.

16
